

VOID ENHANCED

A Starfield Modlist & Guide

v1.0 — Starfield 1.16.244

Introduction

Welcome to **Void Enhanced**, a curated modlist and guide for Starfield version 1.16.244.

This document is organized in two waves:

- **Wave 0 — The Drifter:** A vanilla+/QoL experience designed for new players. Complete how-to-play guide included.
- **Wave 1 — The Void Walker:** An advanced experience with content, mechanics, and graphics mods. Strategy guide included.

Each wave uses a **separate MO2 profile**: start a new game for each wave. Mods do not carry over between waves.

Mod Organizer 2 Installation

Step 1: Download MO2

1. Visit [Nexus Mods — Mod Organizer 2](#).
2. Download the latest stable version.
3. Run the installer.

Step 2: Install MO2

- Choose **Portable** install (recommended for modlists).
- Point the install location to a folder **outside** your Starfield directory (e.g., `C:\Games\MO2-Starfield`).
- Let the installer create shortcuts.

Step 3: Configure MO2 for Starfield

1. Launch MO2.
2. From the dropdown in the top-right, select **Starfield**.
3. If Starfield doesn't appear, click `<Edit...>` and manually add it:
 - **Name:** Starfield
 - **Binary:** `path\to\Starfield.exe`
 - **Start in:** `path\to\Starfield`
4. Click **OK**.

Step 4: Verify Setup

1. In MO2, click **Run** to launch Starfield.
2. The game should start normally. If it doesn't, check your binary path.

Script Extender Setup

Starfield Script Extender (SFSE)

SFSE is required for almost all scripted mods. Every mod in this list that uses scripts will depend on it.

1. Visit [Silverlock — SFSE](#).
2. Download the latest version compatible with 1.16.244.
3. Extract the archive.
4. Copy all files **except** `Data/` into your Starfield root folder (where `Starfield.exe` lives).
5. Copy the `Data/` folder contents into `Data/` (merge if needed).

Launching Through SFSE

In MO2:

1. Click the dropdown next to **Run** and select `<Edit...>`.
2. Add a new executable:
 - **Title:** SFSE
 - **Binary:** `path\to\Starfield\sfse_loader.exe`
3. Always launch Starfield via this entry.

Address Library

Required by many SFSE plugins. Installs like any other mod in MO2.

1. Download from [Nexus Mods — Address Library](#).
2. Install via MO2 (drag the archive into the downloads tab and double-click).

Baka Achievement Enabler (SFSE)

Keeps Steam achievements enabled while mods are active. Required by this modlist — most of these mods flag the game's mod-detection.

1. Download from [Nexus Mods — Baka Achievement Enabler](#).
2. Install via MO2.

Plugins.txt Enabler

Lets Starfield read a `Plugins.txt` load order, which several mods and patchers rely on.

1. Download from [Nexus Mods — Plugins.txt Enabler](#).
2. Install via MO2.

INI and Configuration Tweaks

StarfieldCustom.ini

Create or edit `Documents\My Games\Starfield\StarfieldCustom.ini`:

```
[General]
bEnableMessageOfTheDay=0

[Display]
fDefaultFOV=90

[Camera]
fFPitchMax=80
fFPitchMin=-60
fTPitchMax=80
fTPitchMin=-60

[Archive]
bInvalidateOlderFiles=1
sResourceDataDirs=
```

Recommended Graphics Settings (In-Game)

- Upscaling: DLSS or FSR — Quality
- Shadow Quality: High
- Volumetric Lighting: Medium
- Motion Blur: Off
- Depth of Field: Off
- VSync: Off (cap via GPU driver)

Performance Tips

1. Verify your GPU drivers are up to date.
2. If using DLSS, prefer the latest DLSS DLL.
3. Disable Steam overlay for Starfield.

Load Order & Archive Invalidation

Plugin Sorting

Starfield uses a plugin-based load order similar to Fallout 4 / Skyrim.

1. Enable plugins in the MO2 right pane.
2. Order: master files first, then plugins, then patches.
3. Use the built-in MO2 priority system (left pane) for asset conflicts.

Archive Invalidation

The `StarfieldCustom.ini` setting `bInvalidateOlderFiles=1` tells the game to load loose files over archived ones. Required for texture/mesh replacers.

Load Order Guidelines

- Framework mods (SFSE, Address Library) load first.

- UI mods load after frameworks.
- Content mods load after UI.
- Patches and compatibility fixes load last.

Specific load order is provided per wave in its mod installation section.

Troubleshooting

Game Crashes on Launch

1. Verify SFSE version matches game version.
2. Check MO2 plugin list for incompatible plugins.
3. Disable mods in batches to isolate the culprit.

Textures Appear Black or Missing

- Check `bInvalidateOlderFiles=1` in `StarfieldCustom.ini`.
- Verify MO2 left-pane order — textures should load after vanilla assets.

Mods Not Appearing In-Game

1. Verify the mod is enabled in MO2's left pane.
2. Check the mod's plugin is checked in the right pane.
3. Launch via SFSE, not the vanilla executable.

Common CTD Causes

- Missing master or dependency (check MO2 warnings triangle).
- Outdated SFSE plugins.
- Conflicting mods editing the same record.

Getting Help

- Check `conflicts-mods.md` in the modlist root.
- Visit the mod's Nexus page for known issues.

Wave 0: The Drifter

Background Story

You were nothing. A nobody with a rust bucket and a bad feeling about the Settled Systems.

The message came on an old frequency — one you hadn't heard in years. A distress signal from a research outpost on the edge of known space. The sender? A name you thought you'd buried.

You never asked to be a hero. But the creds are good, and the ship's fuel won't pay for itself.

They call you Drifter. Not because you don't have a past — but because you keep moving forward. One jump at a time.

Building Your Drifter

Build your character:

- **Background:** Long Hauler or Explorer
- **Traits:** Introvert, Taskmaster, Terra Firma
- **Starting Skills:** Piloting, Ballistics, Security

Start in United Colonies space and follow the main quest. Your character is learning the galaxy fresh — embrace the unknown.

How to Play

This section covers the core gameplay systems you'll encounter during Wave 0.

Character Creation

Choose your background and traits as recommended above. Spend starting skill points in Piloting (for better ship access) and Security (for loot flexibility).

Combat Basics

- Use cover and flanking — Starfield's combat AI flushes you out of position.
- Headshots are effective against humanoid enemies.
- Weapon mods: prioritize damage and magazine capacity early.
- Maintain a short-range (shotgun/pistol) and long-range (rifle) weapon.

Inventory and Loot

- Carry weight is limited. Invest in the Weight Lifting skill early.
- Most "junk" items are for outpost decoration — sell them unless you plan to build.
- Weapons, spacesuits, and packs are the primary loot. Compare stats before swapping.
- Use the Transfer menu (R on PC) to move items between you and containers quickly.

Navigation

- Surface maps show discovered points of interest (POIs).
- Fast travel is available from your ship's cockpit or by opening the star map.
- Your scanner (Tab on PC) marks resources, items, and interactables.

Ship Basics

Flight Controls

- Thrusters (Space on PC) enable sharp turns at speed.
- Target enemy engines (E on PC in targeting mode) to disable ships for boarding.

- Boost is limited by your reactor's energy allocation — watch the pips.

Cargo and Contraband

- Upgrade cargo capacity at Ship Services Technicians (found at major spaceports).
- Stolen goods and contraband require shielded cargo holds to avoid scan detection.
- Scan jammers reduce detection probability but don't guarantee safety.

Docking

- Hail ships (target + communicate) before docking.
- Approach within 500m and match speed, then dock when prompted.
- Boarding disabled ships gives you their cargo plus the ship itself.

Outpost Fundamentals

- Outposts are optional but simplify resource gathering.
- Place your first extractor on a planet with iron and aluminum (common building materials).
- Link storage containers via the outpost builder to automate material flow.
- Assign crew to outposts for production bonuses.

Factions

- **UC Vanguard:** Accessible from New Atlantis. High rewards and ties to the main quest.
- **Ryujin Industries:** Stealth-focused corporate faction based in Neon.
- **Crimson Fleet:** Pirate faction with a UC undercover entry route.
- **Freestar Collective:** Western-themed faction in Akila City.

As a Drifter, joining UC Vanguard fits your backstory — a second chance at purpose.

Skills Progression

- Skill tiers unlock by spending skill points in a category (4/8/12 for tiers 2/3/4), not by ranking a specific skill.
- Physical skills (Weight Lifting, Fitness) pay off across all playstyles.
- Tech skills (Piloting, Targeting Control) unlock ship upgrades.
- Combat skills (Ballistics, Pistols, Rifles) directly improve damage.
- Social skills (Persuasion, Commerce) unlock dialogue and economic options.

UI and Quality of Life Mods

Mods in this category improve the user interface and add convenience features without changing core gameplay. Every card below is verified against its Nexus Mods page (see STATUS.md for the decision register).

The StarUI Suite

The StarUI series (by **m8r98a4f2**) is the standard UI foundation for Starfield on PC. The original pages have not been updated since late 2024; install community compatibility patches (search "StarUI patch" / "thesamich") if a menu misbehaves after a game update.

StarUI Inventory

Overhauls every inventory screen for PC: compact rows, sortable columns (value, weight, damage), item tag icons, and a category sidebar.

- **Author:** m8r98a4f2
- **Version:** 2.4.1 (updated 2024-10-04)
- **Dependencies:** None

- **Impact:** UI only — no gameplay values change

StarUI HUD

Reworks the in-world HUD: compact, configurable widgets for hit markers, XP, locations, and enemy health.

- **Author:** m8r98a4f2
- **Version:** 1.3 (updated 2024-10-01)
- **Dependencies:** None
- **Impact:** UI only

StarUI Workbench

Redesigns the weapon, spacesuit, and industrial workbench screens with compact lists and quality-of-life filters.

- **Author:** m8r98a4f2
- **Version:** 1.2 (updated 2024-10-02)
- **Dependencies:** None
- **Impact:** UI only

StarUI Outpost

Brings the same compact, sortable treatment to the outpost build menu and its buildable-object lists.

- **Author:** m8r98a4f2
- **Version:** 1.3 (updated 2024-10-02)
- **Dependencies:** None
- **Impact:** UI only

StarUI Ship Builder

Improves the ship builder interface with compact part lists, better filtering, and clearer part statistics.

- **Author:** m8r98a4f2
- **Version:** 1.3 (updated 2024-10-01)
- **Dependencies:** None
- **Impact:** UI only

The Compact UI Series

The Compact series (by **Stentorious**) shrinks individual menu screens so more information fits at once. Install any subset; they are independent.

Compact Mission Menu

Condenses the mission log so roughly half again as many quest steps are visible at once, and dims completed missions.

- **Author:** Stentorious
- **Version:** 3.0.0 (updated 2026-04-07)
- **Dependencies:** None
- **Impact:** UI only

Compact Ship Builder UI

Fits about a third more ship parts on screen in the builder without sacrificing readability.

- **Author:** Stentorious
- **Version:** 2.0.0 (updated 2026-04-10)
- **Dependencies:** None

- **Impact:** UI only

Compact Crafting UI

Tightens the crafting and cooking screens so more recipes and components are visible per scroll.

- **Author:** Stentorious
- **Version:** 2.0.0 (updated 2026-04-10)
- **Dependencies:** None
- **Impact:** UI only

Compact Crew Menu

Compacts the crew assignment screen for faster companion and ship-crew management.

- **Author:** Stentorious
- **Version:** 2.0.0 (updated 2026-04-09)
- **Dependencies:** None
- **Impact:** UI only

Compact Build Menu

Compacts the outpost build menu listing, pairing well with StarUI Outpost if you prefer its layout.

- **Author:** Stentorious
- **Version:** 2.0.0 (updated 2026-04-11)
- **Dependencies:** None
- **Impact:** UI only

Undelayed Menus

Removes the fade-in/fade-out delays on every menu, raises menu refresh from 30 to 60 FPS, and speeds up hold-to-exit prompts.

- **Author:** Seb263
- **Version:** 1.0.6 (updated 2025-09-23)
- **Dependencies:** None
- **Impact:** UI speed only

BetterHUD - Immersive and Dynamic - User Configurable

Declutters the HUD: moves location/XP text, and lets you hide the XP bar, enemy health bars, and hit markers for a cleaner view.

- **Author:** KhaoMaat
- **Version:** 0.3 (updated 2023-09-21)
- **Dependencies:** None
- **Impact:** UI only — old but display-only, so staleness is weak evidence of breakage

Graphics Mods

Light graphical enhancements compatible with Wave 0's vanilla+ philosophy. No gameplay values change.

Neutral LUTs - No Color Filters

Replaces the base game's heavy color-grading LUTs with neutral ones, removing the green/teal cast from interiors and the orange cast from many planets for a more natural image.

- **Author:** fadingsignal
- **Version:** 1.5 (updated 2024-10-03)
- **Dependencies:** None
- **Impact:** Color grading only — recommended as the single most effective “looks better” change in Wave 0

Starfield HD Reworked Project

High-resolution texture overhaul of environments, characters, and effects while staying faithful to the vanilla art style. Optional here; a 6 GB+ VRAM GPU is recommended to avoid any frame-rate hit.

- **Author:** HalkHogan
- **Version:** 1.0-fix (updated 2023-09-23)
- **Dependencies:** None (requires `bInvalidateOlderFiles=1` from setup)
- **Impact:** Textures only — no gameplay change; old but texture-only, so staleness is weak evidence of breakage

Wave 0 Mod Installation

Prerequisites

Ensure you have completed the setup guide (MO2, SFSE, Address Library, INI tweaks) before continuing. Frameworks from setup — SFSE, Address Library for SFSE Plugins, Baka Achievement Enabler, and Plugins.txt Enabler — are required by this wave.

Installation Order

1. Framework mods first (already covered in setup).
2. UI mods: the StarUI suite, then the Compact UI series, then Undelayed Menus and BetterHUD.
3. Graphics mods: Neutral LUTs, then Starfield HD Reworked Project (optional).

Load Order

- Frameworks load first (SFSE plugins, Address Library).
- UI mods load after frameworks; keep the StarUI and Compact suites adjacent for readability.
- Texture replacers load last in the left pane so they override vanilla assets.
- Archive invalidation (`bInvalidateOlderFiles=1`) must be set for the texture mods.

Verification

Launch the game via SFSE. Verify:

1. The StarUI and Compact menus appear and are compact/sortable.
2. BetterHUD hides the elements you configured.
3. Neutral LUTs removes the color cast (interiors look neutral, not green).
4. No crashes on save or load.

Wave 1: The Void Walker

Background Story

The void doesn't forget.

You've seen things in the black between stars. Ancient tech that shouldn't exist. Signals that sound like screaming. You made enemies — the kind that don't die when you pull the trigger.

Now you walk the line. One foot in civilization, one in the abyss. You know the Settled Systems is just a thin crust over something deeper. Something hungry.

They call you Void Walker. Not because you chose the path — but because the path chose you.

Character Creation

Build your Void Walker:

- **Background:** Bounty Hunter or Xenobiologist
- **Traits:** Spaced, Empath, Neon Street Rat
- **Starting Skills:** Sneak, Medicine, Weapon Engineering

Start in the Narion system. Your character has history — bad deals, old debts, knowledge that costs more than it pays.

Strategy Guide

This section covers advanced play techniques and systems. Mod-specific notes will be added once mods are selected for this wave.

Advanced Combat

- Use positioning and environmental hazards to control engagements.
- Study enemy types: robotic, alien, and humanoid enemies each have distinct weaknesses.
- Match damage types to armor when possible.

Economy and Smuggling

- Certain systems scan for contraband. Wolf and Kryx are safe harbors.
- Invest in shielded cargo modules and scan jammers.
- Learn which vendors sell rare resources and which buy stolen goods.

Faction Strategy

- Choose one major faction to align with for endgame content.
- Cross-faction actions carry reputation consequences.
- Neutral systems and settlements are valuable staging grounds.

Ship Specialization

- **Combat ships:** Max engines and shields. Particle weapons are the most versatile.
- **Haulers:** Prioritize cargo and fuel capacity. Shielded cargo mandatory.
- **Explorers:** Grav drive range and scanning arrays. Invest in jump distance.

Endgame and NG+

- Completing the main quest unlocks New Game Plus, resetting quest progress.
- Consider finishing all faction quests before entering the Unity.
- Stash gear in a safe container before NG+ — it won't carry over, but it persists if you reload.

Content Mods

Mods that add new quests, locations, NPCs, weapons, armor, and world-building content. Every card is verified against its Nexus Mods page (decision register in STATUS.md).

Quests & Locations

Lazarus Awakened

A major, fully voiced side questline widely regarded as the best free quest mod for Starfield. Uses the SSNN building in New Atlantis as its starting point.

- **Author:** MinionSquisher
- **Version:** 1.00 / New Version 2.0 (updated 2024-11-22)
- **Dependencies:** None
- **System Impact:** Adds quests, NPCs, locations, and unique rewards
- **Notes:** Use the "New Version 2.0" file — older builds had script-detachment issues. Complete the UC Vanguard line first to avoid spoilers.

Regrets

A self-contained side quest by the Lazarus author: a voiced NPC, a dungeon, environmental storytelling, and unique loot, begun in Akila City.

- **Author:** MinionSquisher
- **Version:** 1.00 (updated 2024-11-20)
- **Dependencies:** None
- **System Impact:** Adds a quest, NPC, dungeon, and rewards
- **Notes:** Touches Akila's Marshal's office and the Waggoner farmhouse — may conflict with mods editing those cells.

New Landmark Quests - Cut Content Restored

Restores discovery quests for the Leaning Tower of Pisa, the Face on Mars, the NASA Launch Facility, and other landmarks that shipped in the files but never got quests.

- **Author:** ConnerRia
- **Version:** 1.35 (updated 2023-10-24)
- **Dependencies:** None
- **System Impact:** Adds quests and objective hooks for otherwise-inaccessible locations
- **Notes:** Old but content-only; quests are started from books at Sinclair's Books in Akila City.

Dark Universe - Takeover

Adds 50 new procedurally placed Spacer military-base POIs, integrated into the radiant quest and bounty systems, so exploration and board missions draw from a much larger pool.

- **Author:** kaosnyrb
- **Version:** 2.1.0 (updated 2026-04-21)
- **Dependencies:** None
- **System Impact:** Adds new locations; integrates with radiant/bounty quests

Weapons & Items

Lodecs Custom Armory (LCA)

A lore-friendly weapon pack adding original manufacturers and high-quality firearms — assault rifles, snipers, and particle pistols — that drop and spawn naturally.

- **Author:** lodec
- **Version:** 1.3.3 (updated 2026-05-15)
- **Dependencies:** None
- **System Impact:** Adds weapons to leveled lists and vendors

Plague's Optics Reimagined

Remakes the reflex and holographic sights with 30+ clean, usable reticle options. Uses a FOMOD installer to assign reticles per weapon category.

- **Author:** illbodyPLAGUE
- **Version:** 2.5 (updated 2026-01-09)
- **Dependencies:** None
- **System Impact:** Cosmetic/optics only — no weapon stat changes

Armor & Clothing

Eit Clothiers Plus

A large collection of modular clothing — jackets, belts, gloves, glasses, necklaces, and outfits — sold through the EIT Clothiers shop in New Atlantis.

- **Author:** zone79
- **Version:** 2.1 (updated 2025-01-29)
- **Dependencies:** None
- **System Impact:** Adds wearable items to a vendor
- **Notes:** Download the version matching your body mesh (vanilla vs. custom). Pick Zone79 or KryoZet gear rather than stacking both, to avoid invisible-body conflicts.

Companions & Crew

The Gang's All Here - Multiple Companions and Crew

Lets you travel with multiple companions at once via a control terminal: manage, teleport, and dismiss followers, and tune their commentary.

- **Author:** Aurelianis
- **Version:** 4.3.1 (updated 2026-07-30)
- **Dependencies:** None
- **System Impact:** Changes companion/crew limits
- **Notes:** Dismiss all active crew before installing or updating.

Mechanics Mods

Mods that introduce new gameplay systems and deepen existing mechanics. Every card is verified against its Nexus Mods page (decision register in STATUS.md).

Overhaul

Royal Galaxy - A Starfield Revamp And Cut Content Restoration

A "vanilla+" overhaul and the wave's anchor: buffs Terrormorphs and Ashta, raises enemy spawn counts, reworks the economy and vendor credits, improves loot, expands POIs and weather, and restores cut content — while editing vanilla records to stay broadly compatible.

- **Author:** JaeDL
- **Version:** 4.0 (updated 2026-04-19)
- **Dependencies:** None (follow its load-order instructions)
- **System Impact:** Major — combat, economy, exploration

Survival

Starvival - Immersive Survival Addon

A deep, modular survival system: hunger, thirst, and fatigue needs; ship fuel and ammo consumption; environmental hazards; crew morale and pay; and expanded addictions/adrenaline. Every module is toggleable in its in-game configuration book.

- **Author:** IKocMoHaBTI
- **Version:** 12.5.0 (updated 2026-08-08)
- **Dependencies:** None
- **System Impact:** Major — survival, economy, ship management
- **Notes:** Punishing by default; disable modules you don't want. Don't stack with another survival overhaul.

Combat

Weapons of Fate (Ballistics Overhaul)

Adds bullet drop and visible weapon tracers for a harder-edged shooter feel, with negligible performance cost.

- **Author:** Seb263
- **Version:** 1.1.1 (updated 2023-10-26)
- **Dependencies:** None
- **System Impact:** Combat ballistics — changes how ranged weapons feel, not their stats

Crafting

Legendary Module Recycler

Adds a recycler (buildable at outposts, ships, and homes; a permanent one is in the Lodge basement) that strips legendary effects from loot you already found and lets you apply them to gear you prefer.

- **Author:** JonathanOstrus
- **Version:** 2.12 (updated 2026-05-11)
- **Dependencies:** None
- **System Impact:** Crafting/items — only recycles effects you have legitimately looted, so it is not a free spawn

Exploration

POI Variations - No More Duplicates

Generates multiple variations of vanilla POIs (different loot, enemy placement, clutter) and restricts lore-heavy locations to appear only once, cutting the repetition of repeated dungeons.

- **Author:** PlatinumPoster
- **Version:** 1.03 (updated 2026-08-04)
- **Dependencies:** None
- **System Impact:** Exploration — POI generation rules

Unique POI Names

Replaces generic labels ("Cave", "Industrial Outpost") with unique, descriptive names so you can tell a new location from one you've already cleared.

- **Author:** paulbrock
- **Version:** 0.9 (updated 2026-04-17)
- **Dependencies:** None
- **System Impact:** Exploration — naming/readability only

Ship Building

Ship Builder Categories (SBC)

A shared framework of ship-part keywords that lets multiple ship-building mods coexist without category conflicts. Load it high.

- **Author:** rux616
- **Version:** 1.21.0 (updated 2026-04-11)
- **Dependencies:** None (required by the two mods below)
- **System Impact:** Framework — no visible change on its own

Better Ship Part Flips

Adds extra flip options to vanilla ship parts (shields, cargo, fuel tanks, grav drives, reactors, structure), unlocking far more builder layouts.

- **Author:** rux616
- **Version:** 1.3.1 (updated 2024-09-07)
- **Dependencies:** Ship Builder Categories
- **System Impact:** Ship builder — new flip variants

Better Ship Part Snaps

Improves how parts snap together in the builder, allowing placements the vanilla snap rules forbid.

- **Author:** rux616
- **Version:** 1.1.0 (updated 2026-04-11)
- **Dependencies:** Ship Builder Categories
- **System Impact:** Ship builder — snap/placement rules
- **Notes:** Do not combine with Ship Module Snap Expansion (SMSEX) — they edit the same data.

Graphics Mods (Enhanced)

More demanding visual enhancements for a fully modded experience.

Starfield HD Reworked Project

High-resolution texture overhaul of environments, characters, and effects, faithful to the vanilla art style. The headline graphics upgrade for this wave.

- **Author:** HalkHogan
- **Version:** 1.0-fix (updated 2023-09-23)
- **Dependencies:** None (requires `bInvalidateOlderFiles=1` from setup)
- **System Impact:** Performance — recommend a 6 GB+ VRAM GPU

Constellation Reshade

A ReShade preset tuned for Starfield, adjusting tone and color for a more cinematic image on top of the texture work above.

- **Author:** 2077v2
- **Version:** 1.2 (updated 2023-09-10)
- **Dependencies:** ReShade (installed separately)
- **System Impact:** Performance — ReShade adds a small post-processing cost
- **Notes:** Optional. Install ReShade, then place this preset and select it in-game.

Lighting (Creations-only — optional)

The large lighting overhaul **Real Lights Starfield** (by RabbitDoesStuff, 15,000+ hand-placed lights) is distributed only through the Bethesda Creations store, not Nexus Mods. If you want it, install it from the in-game Creations menu; it is compatible with this MO2-based list but is tracked outside it.

Wave 1 Mod Installation

Prerequisites

Complete the Wave 0 playthrough first. Create a new MO2 profile for Wave 1 — do not carry over Wave 0 mods. Frameworks (SFSE, Address Library, Baka Achievement Enabler, Plugins.txt Enabler) are re-installed in this profile.

Creating a New MO2 Profile

1. In MO2, open the profile dropdown and select **Manage**.
2. Click **Create** and name it **Void Enhanced – Wave 1**.
3. Set it as a **separate profile** (do not copy Wave 0's mods).

Installation Order

1. Framework mods (SFSE plugins, Address Library, enablers).
2. Ship Builder Categories (SBC) — before other ship mods.
3. Content mods (quests, weapons, armor, companions).
4. Mechanics mods (Royal Galaxy, Starvival, POI mods, ship flips/snaps).
5. Graphics mods (Starfield HD Reworked Project, optional ReShade).
6. Patches and compatibility fixes.

Load Order

Priority, top to bottom:

- Masters and frameworks first (SFSE, Address Library, SBC).
- Framework patches second.
- Quest and content mods third.
- Mechanics mods fourth (Royal Galaxy and Starvival before smaller mechanics tweaks).
- Graphics last (texture replacers lowest in the left pane).
- Comprehensive patches last.

Specific notes:

- Ship Builder Categories loads high; Better Ship Part Flips and Snaps load after it.
- Do not combine Better Ship Part Flips/Snaps with Ship Module Snap Expansion (SMSEX).
- Don't stack Starvival with another survival overhaul, or Royal Galaxy with another total gameplay overhaul.

Verification

1. Launch via SFSE.
2. Check each configurable mod's options (Starvival's config book, BetterHUD, The Gang's All Here terminal).
3. Test a save-load cycle.
4. Visit a new location (a Dark Universe base or a restored landmark quest) to confirm content mods load.
