16.11	Mod Idea: Co-Driver / Relief Driver System	103

1 Introduction

1.1 Purpose

This guide provides a curated, tested collection of mods for *Euro Truck Simulator 2* (ETS2). Every mod listed here has been verified for compatibility with game version 1.60 and configured to work together as a cohesive modlist. Whether you are returning after a break or building a modded profile from scratch, this guide serves as a reliable reference for assembling a stable, visually rich, and immersive experience.

1.2 Mod Sourcing Philosophy

No mods in this guide are sourced from the Steam Workshop. Workshop subscriptions introduce silent updates, broken savegames from forced upgrades, and a lack of control over version pinning. Instead, every mod is downloaded from trusted third-party sites where version history and archival copies are available:

- ets2world.com
- ets2mods.lt
- ets2.lt/en
- modland.net
- truckymods.io
- modhub.us
- terramaps.net
- promods.net
- forum.scssoft.com

These sites are chosen for their community reputation, uptime, and resistance to takedown pressure. All mods linked from this guide have been scanned for malware and tested for game-breaking issues at the time of writing.

1.3 Goals

This modlist aims to enhance ETS2 across five pillars:

1. *Better Graphics* — Reshade presets, weather packs, texture overhauls, and lighting tweaks that bring the game closer to photorealism at a 4K baseline resolution.
2. *More Trucks* — Unofficial truck brands and high-quality reworks of SCS trucks with detailed interiors, custom sounds, and realistic physics.
3. *More Maps* — Map combo compatibility with ProMods, RusMap, and other major map mods that expand the playable area across Europe, Asia, and beyond.
4. *Gameplay Depth* — Economy rebalances, realistic company management, traffic density, and AI behaviour improvements that add complexity without grinding.
5. *Role-Playing* — Mods that support immersive driving: realistic fuel consumption, weight stations, parking enforcement, sleep cycles, and CB radio simulation.

1.4 What This Guide Is Not

This guide *explicitly excludes* cheating or overpowered mods. You will not find:

- Money or XP cheats
- Instant-unlock garages or skills
- Physics-defying trucks with 5000 HP engines
- Teleportation or delivery-skip mods

The goal is a challenging, rewarding simulation — not a shortcut to max level. If you want to trivialise the game, this is not the guide for you.

1.5 Baseline Profile

This guide targets a specific hardware baseline. Mods marked ★ *Baseline* throughout the guide form the recommended profile for this setup:

Component	Spec
<i>GPU</i>	RTX 4080 Super (16 GB VRAM)
<i>RAM</i>	64 GB
<i>Target</i>	4K, 50-60 FPS, ultra settings

All visual mods are selected and tested at 3840×2160 (4K). If you are playing at 1080p or 1440p, some texture packs will still improve quality, but you may need to downscale certain 4K-only assets. Performance impact notes at each entry account for scaling.

1.6 Guide Structure

The guide is organised into the following sections:

1. *Introduction* (this file) — Scope, philosophy, and goals.
2. *Core Framework* — Essential mods that every profile needs: map connectors, required libraries, load order foundation.
3. *Graphics & Weather* — Reshade, weather packs, lighting, skyboxes, and texture overhauls.
4. *Trucks* — New truck brands, truck reworks, sound packs, and tuning parts.
5. *Trailers & Cargo* — New trailers, cargo packs, and trailer skin packs.
6. *Maps* — Map mods and connectors for a full map combo.
7. *Gameplay & Realism* — Economy, physics, AI, traffic, and company mods.
8. *UI & QoL* — Dashboard computers, navigation enhancements, menu tweaks.
9. *Sound* — Engine packs, environment audio, and horn packs.
10. *Traffic & AI* — AI traffic packs, police mods, and real company skins.
11. *Appendices* — Load order template, troubleshooting, and site index.

Each mod entry follows a consistent format:

Mod Name

- ****Version:**** Latest tested version
- ****Source:**** Download URL
- ****Category:**** Section category
- ****Description:**** What the mod does and why it is included.
- ****Compatibility:**** Known conflicts, dependencies, and load order placement notes.
- ****Performance Impact:**** Estimated FPS cost and VRAM usage at 4K.
- ****Configuration:**** In-mod settings, if any, required for correct behaviour.

Let's build the ultimate ETS2 profile.

2 Getting Started

2.1 Buying Euro Truck Simulator 2

ETS2 is available on Steam. The base game alone is playable, but the guide assumes you own all current map DLCs. ProMods — the cornerstone of the map section in this guide — requires the following DLCs to function:

DLC	Required By
Going East!	ProMods (base requirement)
Scandinavia	ProMods (base requirement)
Vive la France!	ProMods (base requirement)
Italia	ProMods (base requirement)
Beyond the Baltic Sea	ProMods (base requirement)
Iberia	ProMods (base requirement)
West Balkans	ProMods (base requirement)

These are often available in discounted bundles during Steam sales. If you are missing any, the ProMods map will show greyed-out sectors or fail to load entirely.

Optional but recommended: the *Cargo Pack* DLCs (Heavy Cargo Pack, Special Transport, Krone Trailer Pack, Feldbinder Trailer Pack) add cargo variety that pairs well with the gameplay and trailer mods later in this guide.

2.2 Basic Controls & Gameplay Loop

2.2.1 Controls

The default controls are keyboard + mouse. Most players eventually upgrade to a steering wheel, but the game is fully playable without one:

Action	Default Key
Accelerate	W or Up Arrow
Brake / Reverse	S or Down Arrow
Steer Left / Right	A / D or Left / Right Arrow
Indicator (Left / Right)	Left Bracket / Right Bracket
Headlights	L
Horn	H
Wipers	P
Parking Brake	Spacebar
Map / GPS	N
Enter / Exit Vehicle	E
Cruise Control +	Shift + Up Arrow
Cruise Control -	Shift + Down Arrow
Dashboard display toggle	F2
Navigation mode toggle	F5
Jobs menu	F6
Info / messages	F8

You can rebind every key from the Options → Controls menu. If you have a controller or wheel, bindings are detected automatically.

2.2.2 The Gameplay Loop

The core loop is simple and addictive:

1. *Find a job* — Browse the Freight Market or Cargo Market from the jobs menu (F6). Quick Jobs are available if you do not own a trailer yet.
2. *Drive to the pickup* — Navigate to the depot using the GPS (N for map, F5 for route overview).
3. *Hook up the trailer* — Park under the trailer and press T to attach.
4. *Deliver the cargo* — Drive to the destination within the time limit. Damage to the trailer reduces your pay.
5. *Get paid* — Earnings go toward buying your own truck, expanding your garage, and hiring drivers.
6. *Repeat or upgrade* — Use your earnings to buy trucks, hire employees, and grow your company.

As you level up, you unlock new skills (long-distance driving, hazardous materials, fragile cargo) that open higher-paying jobs.

2.3 Role-Playing: Define Your Story

This guide treats ETS2 as more than a driving game. The mechanics support a rich role-playing experience if you approach it with intention. Before building a modded profile, decide who you want to be on the road.

2.3.1 Owner-Operator vs. Fleet Owner

Role	Playstyle
<i>Owner-Operator</i>	You own one truck. You drive every delivery yourself. You care about fuel economy, route efficiency, and the details of your rig. Slower progression, but every upgrade matters.
<i>Fleet Owner</i>	You build a company. Hire drivers, buy multiple trucks, expand garages across Europe. You still drive, but your income comes from managing a team. Faster money, more admin.

There is no wrong choice. You can start as an owner-operator and grow into a fleet owner over time.

2.3.2 Naming Your Company

Your company name appears on your truck doors, your trailers, and the delivery screen. Choose something that fits your character:

- *Realistic*: A logistics company name (Nordic Freight, Adriatic Logistics, Balkan Express)
- *Personal*: Your name or initials (Nimro Trans, Mike's Haulage)
- *Thematic*: Based on your home region or style (Alpine Transport, Mediterranean Shipping)
- *Minimalist*: A single word (Horizon, Apex, Convoy)

2.3.3 Choosing Your Home Garage

The game prompts you to choose a home garage when you create a profile. This determines your starting city and the region where you find early jobs. Considerations:

- *Central Europe* (Germany, Netherlands, Belgium) — Short, dense routes. Great for learning.
- *United Kingdom* — Left-side driving. A fun challenge after you have the basics.
- *Scandinavia* — Longer routes, toll roads, ferries. Beautiful but spread out.
- *Iberia or Italy* — Good mix of motorways and regional roads. Warmer climates.
- *Eastern Europe* (Poland, Czechia) — Cheaper garages, good for early game budget.

Pick a city you enjoy driving through on the map screen. You can buy additional garages later.

2.3.4 Role-Playing Prompts

To get into character on every trip:

- *Pre-trip inspection*: Check your tyres, lights, and damage before leaving the depot.
- *Log your deliveries*: Keep a simple text file or spreadsheet with date, route, cargo, and pay.
- *Stick to realistic hours*: Use the fatigue simulation. Stop for the night when your driver gets tired.
- *Fuel strategy*: Fill up only when fuel is below a quarter tank. Compare prices on the GPS.
- *Avoid teleporting*: Never skip a delivery or teleport to a garage. Drive every kilometre.
- *Listen to in-game radio*: Tune into real internet radio stations from the country you are driving through.
- *Commit to the load*: Once you accept a job, deliver it. No cancelling for a better-paying load.

2.4 Profile Management: Keep Modded and Vanilla Separate

ETS2 supports multiple profiles. Creating separate profiles for modded and vanilla playthroughs is essential for two reasons:

1. *Savegame corruption*: Disabling a mod mid-playthrough can break a save permanently. A dedicated modded profile ensures you never accidentally load a modded save in vanilla.
2. *Load order experimentation*: When testing new mods, you want a profile that is already set up for the full modlist. If something breaks, your vanilla profile is untouched.

2.4.1 Recommendation

- *Profile 1 — Vanilla*: Unmodded. For achievement hunting, testing performance baselines, and playing while waiting for mod updates.
- *Profile 2 — Modded*: The full modlist from this guide. Never load this profile without the correct mods enabled.
- *Profile 3 (optional) — Test*: A throwaway profile for experimenting with new mods before adding them to your main modded profile.

Name them clearly: "Vanilla," "Modded — ProMods," "Modded — Test." This avoids accidental loads and saves you from hours of troubleshooting.

When creating a modded profile in the game's profile menu, give it a distinctive name and select the *Modded* checkbox. The game will remind you every time you load it if mods are missing or changed — this is a feature, not a bug.

3 Mod Manager

3.1 Why Use a Mod Manager?

ETS2's built-in mod manager works, but it has real limitations when you are managing 50+ mods across multiple profiles:

- *No drag-and-drop reordering* — You move mods one at a time with up/down buttons.
- *No mod thumbnails* — You identify mods by filename alone.
- *No cloud backup* — Load orders are stored locally per profile with no export option.
- *No profile comparison* — Switching profiles means manually re-enabling everything.

Truck Mod Manager solves all of these. It is a third-party open-source desktop app built in Python by the ETS2 community. It sits alongside your game — it does not modify ETS2 executables or memory — and manages the mod and mod configuration files that the game already uses. SCS Software has never objected to this class of tool.

3.2 Installing Truck Mod Manager

3.2.1 Step 1: Install Python 3.10+

Truck Mod Manager is a Python application. You need Python 3.10 or newer installed on your system *before* you download the tool.

1. Go to python.org/downloads.
2. Download the latest *Python 3.10+* installer for Windows.
3. Run the installer.
4. *Important:* Check the box “Add Python to PATH” at the bottom of the installer window.
5. Click *Install Now* and wait for the installation to finish.
6. Verify the installation by opening a Command Prompt or PowerShell window and running:

```
python --version
```

You should see output like `Python 3.13.x`. If you see an error, Python was not added to PATH — re-run the installer and make sure the checkbox is checked.

3.2.2 Step 2: Download Truck Mod Manager

1. Visit the GitHub repository: github.com/cortexstudiosinfo/ETS2-MOD-MANAGER-UI
2. Click the green *Code* button, then *Download ZIP*.
3. Extract the ZIP file to a permanent location, e.g. `D:\Tools\ETS2-Mod-Manager` or `D:\Tools\ETS2-Mod-Manager`.
4. Open the extracted folder. You should see files including `run.cmd`, `run.cmd`, and `run.cmd`.

3.2.3 Step 3: Run the Launcher

Double-click `run.cmd`. This script does the following automatically:

1. Checks that Python is installed and available.
2. Creates a Python virtual environment (`venv\`) inside the folder if one does not exist.
3. Installs all required Python packages from `requirements.txt`:
 - `customtkinter` — Modern UI toolkit for the interface
 - `pillow` — Image handling for mod thumbnails
 - `requests` — HTTP requests for Workshop thumbnails and cloud presets
 - `firebase-admin + firebase-admin` — Cloud preset storage backend
4. Launches the application.

The first run takes longer because packages are being downloaded. Subsequent launches skip the install step and open immediately.

Screenshot: Truck Mod Manager console during first launch

If the console window shows no errors, the main application window opens within a few seconds.

3.3 First-Time Setup

When you launch Truck Mod Manager for the first time, it needs to know where ETS2 is installed. The tool attempts to detect this automatically from the Steam library, but you should verify the path.

3.3.1 Setting the Game Install Directory

1. In the Truck Mod Manager window, locate the *Settings* section (gear icon or menu bar depending on version).

2. Find the field labelled *ETS2 Install Path* or *Game Directory*.

3. Verify or enter the correct path. Typical locations:

Installation Type	Path	Default Steam	C:\Program Files (x86)\Steam\steamapps\common\Euro Truck Simulator 2
		Steam on another drive	D:\SteamLibrary\steamapps\common\Euro Truck Simulator 2
		Non-Steam	Your custom install location

4. The tool also needs the *ETS2 Documents Path*, where your profiles and mod folder live. This is typically:

%USERPROFILE%\Documents\Euro Truck Simulator 2

The launcher usually detects this automatically from your Windows user folder.

5. Click *Save* or *Apply*.

3.3.2 What Happens Next

The manager reads two key locations:

Location	Purpose
Documents\Euro Truck Simulator 2\mod\	Your manually downloaded mod .zip and .zip files
Documents\Euro Truck Simulator 2\profiles\	Your saved game profiles, each containing a manifest.sii with its load order
steamapps\workshop\content\227300\	Steam Workshop mod files cached on disk

If all three paths resolve, the manager is ready to use.

3.4 Profile Detection and Management

Truck Mod Manager automatically lists every ETS2 profile it finds in your documents folder. Each profile is displayed by its in-game name (not the folder hash), making it easy to identify your profiles.

Screenshot: Profile selection dropdown in Truck Mod Manager

3.4.1 Creating and Switching Profiles

- *Selecting a profile* — Click on a profile name in the manager to load its mod list and current load order.
- *Creating a new profile* — You can create profiles from within the manager. A new empty profile is created in your ETS2 documents folder and appears in the game's profile selection screen next time you launch ETS2.
- *Renaming profiles* — Some versions of the manager allow renaming profiles directly. Otherwise, rename them from the game's profile screen.

3.4.2 Recommended Profile Setup

As discussed in the [Getting Started](#) section, maintain at least two profiles visible in the manager:

1. *Vanilla* — No mods enabled. Safe for achievement hunting and testing performance baselines.
2. *Modded* — *ProMods* — The full modlist from this guide. Never load this profile without mods active.

The manager shows you which profile is currently selected and lets you switch instantly.

3.5 Scanning Mods

Once a profile is selected, the manager scans two sources for available mods:

3.5.1 Local Mods

Your .zip folder is scanned for .zip and .zip files. Each mod appears in the manager's mod list with:

- *Filename* (e.g., promods-v280.scs)
- *Mod name* as declared inside the mod manifest
- *Thumbnail* if available (auto-downloaded from the Workshop or extracted from the mod)

3.5.2 Workshop Mods

If you have subscribed to mods on the Steam Workshop, the manager detects them in your Steam cache at steamapps\workshop\content\227300\ . These appear in a separate section or with a Workshop badge.

Workshop mods cannot be re-ordered independently through Truck Mod Manager — Workshop load order is controlled by Steam's internal mechanism when the game launches. The manager shows them so you have the full picture of what will be active.

3.5.3 Thumbnail Downloads

For Steam Workshop mods, the manager automatically fetches the official Workshop thumbnail and displays it in the list. This makes visual identification much faster than reading filenames.

Screenshot: Mod list with thumbnails in Truck Mod Manager

3.6 Drag-and-Drop Load Order Management

The single biggest improvement over the in-game manager is *drag-and-drop reordering*.

3.6.1 The Load Order Panel

The load order panel shows all mods assigned to the currently selected profile, arranged top-to-bottom. The *top* of the list is loaded *last* and has the *highest priority* (it overrides mods below it).

This matches the convention used in the in-game mod manager: the mod at the top of the list wins conflicts.

3.6.2 Reordering Mods

1. Click and hold any mod in the active load order list.
2. Drag it up or down to the desired position.
3. Release the mouse button. The order updates instantly.

The change is written to your profile's configuration file automatically. You do not need to click a separate "Save" button.

Screenshot: Drag-and-drop reordering in Truck Mod Manager

3.6.3 Enabling and Disabling Mods

- *Checkbox* next to each mod toggles it on or off without removing it from the profile.
- Disabled mods are greyed out but stay in the list, ready to be re-enabled with one click.
- This is useful for testing: disable one mod to see if a crash stops, then re-enable it.

3.6.4 Adding Mods to a Profile

Mods detected in your mod\ folder appear in a separate "Available Mods" panel. Drag a mod from the available list onto the active load order to add it to the profile.

3.6.5 Removing Mods from a Profile

Right-click a mod in the active list and select *Remove* or drag it back to the available mods panel. The mod is removed from the profile's load order but stays in your mod\ folder — it is not deleted.

3.7 Cloud Presets for Backup and Sharing

One of the most valuable features of Truck Mod Manager is *cloud presets*. A cloud preset captures the complete load order for a profile and saves it to a cloud backend so you can restore it later or apply it on another machine.

3.7.1 How Cloud Presets Work

The manager uses Firebase Firestore (Google's cloud database) as the storage backend. When you save a preset, the manager uploads:

- The full list of enabled mods in order
- Each mod's filename and internal name
- A timestamp for version tracking

The preset is keyed to your Firebase account or a unique identifier you create.

3.7.2 Saving a Preset

1. Arrange your load order to your liking.
2. Click the *Cloud Presets* button in the toolbar.
3. Click *Save Preset*.
4. Give your preset a name (e.g., "ProMods Full — v2.80" or "Graphics Only Light").
5. Confirm. The preset is uploaded to the cloud.

3.7.3 Restoring a Preset

1. Click *Cloud Presets*.
2. Select a preset from the list of saved configurations.
3. Click *Restore*.
4. The manager downloads the preset and applies the load order to the currently selected profile.

This is particularly useful when:

- *Reinstalling Windows or moving to a new PC* — Set up ETS2 fresh, install Truck Mod Manager, restore your preset, and your load order is back in seconds.
- *Experimenting with different mod combinations* — Save a working preset before trying new mods. If something breaks, restore the known-good preset.
- *Sharing load orders with friends* — Cloud presets can be shared between users, though this depends on the preset's scope setting in the manager.

3.7.4 Preset Management

The *Cloud Presets* panel also lets you:

- *Rename* existing presets
- *Delete* presets you no longer need
- *Overwrite* a preset with the current load order
- *View preset metadata* — creation date, mod count, and associated profile

Screenshot: Cloud presets panel

3.8 Crash Reporting and Logs

If Truck Mod Manager encounters an error, it shows a built-in crash reporting window with:

- A *log viewer* that displays recent application activity
- A *stack trace* showing where the error occurred
- *Contact information* for reporting the issue to the developer

You can also access logs manually by opening `log.txt` in the Truck Mod Manager installation folder. Always include this log when seeking help on the repository's Issues page.

3.9 Re-launching After Setup

Once everything is configured, you can launch Truck Mod Manager at any time by:

1. Double-clicking `run.cmd` in the installation folder.
2. Optionally creating a shortcut to `run.cmd` on your desktop or Start Menu.

The launcher reuses the existing virtual environment, so subsequent launches are fast — the dependencies are already installed.

3.10 Next Steps

With Truck Mod Manager installed and configured, you are ready to start building your modlist. The next chapter introduces the *Core Framework* — the essential mods and libraries that every profile needs as a foundation, starting with the ProMods map pack and its required connectors.

4 Configuration

Before enabling any mods, you need to prepare ETS2's configuration files. Some settings live outside the in-game Options menu and must be edited directly in `config.cfg`. Other settings are accessible from the graphics menu but should be set to specific values for a heavy mod load at 4K.

4.1 Backup Your Config Files

Always back up your configuration files before editing them. A single typo can reset all your bindings or prevent the game from starting. Navigate to:

`Documents\Euro Truck Simulator 2\`

Copy the following files to a safe location:

- `config.cfg` — Core settings, key bindings, and graphics options.
- `controls.sii` — Controller and steering wheel mappings.
- `profile_config.ini` — Per-profile settings (save in a modded profile's folder if you have one).

Keep the backup outside the ETS2 directory (e.g., `Documents\ETS2 Config Backups`) so updates from future game versions do not overwrite it. If the game resets your configuration or behaves unexpectedly after an edit, restore the originals and start again.

4.2 Editing `config.cfg`

The file `Documents\Euro Truck Simulator 2\config.cfg` is a plain-text key-value store. Open it in Notepad or any text editor (not a word processor). ETS2 reads this file at startup. Lines that start with a number are key bindings; lines that start with a letter are configuration variables. The game writes to this file on exit, so your edits persist only if you do not change them from the in-game menu — if you do, the game will overwrite your manual changes.

The recommended approach: make the edits, launch the game, confirm they took effect, and then avoid changing those specific settings from the Options menu.

4.2.1 Developer Console

The developer console is disabled by default. Enable it so you can load map sectors, teleport for testing, and inspect mod errors:

```
g_developer "1"
g_console "1"
```

After enabling, press the *tilde key* (~) or the key above Tab to open the console in-game. Common console commands for modded profiles:

Command	Purpose
edit	Opens the map editor (use sparingly).
goto x y	Teleport to map coordinates (useful for testing mod placement at a specific city).
quit	Saves and exits to desktop.
screenshot	Captures a screenshot without UI elements.
r_buffer_page_size	(Read-only display) Shows the current buffer page size.

4.2.2 Buffer & Memory Tweaks

Mod-heavy profiles load significantly more geometry, textures, and map data than vanilla. The default values for three buffer-related settings are too low for a 50+ mod profile at 4K and will cause stuttering, pop-in, or crashes.

```
# Increase from default 10 to 50 or 100
r_buffer_page_size "50"
```

```
# Increase from default 30 to 50
mm_max_resource_size "50"
```

```
# Increase from default 300 to 1000
mm_max_tmp_buffers_size "1000"
```

4.2.2.1 r_buffer_page_size

Controls the size of the geometry buffer that holds vertex data for visible objects. At 4K with map mods, the default of 10 is inadequate. Set it to *50* for most modlists or *100* if you run map combos covering all of Europe plus ProMods, RusMap, and ROEX. Values above 100 do not provide additional benefit and may waste VRAM.

4.2.2.2 mm_max_resource_size

Controls the maximum file size (in MB) that the asset manager loads into memory at once. Map mods and high-resolution texture packs include files larger than the default 30 MB cap. Raising this to *50* prevents texture-loading errors for most 4K packs. If a mod uses files larger than 50 MB, you will see a *Failed to load resource* warning in the game log — in that case, increase further.

4.2.2.3 mm_max_tmp_buffers_size

Controls the temporary buffer pool for streaming assets. Heavy map combos and texture mods exhaust the default (300) quickly. Raising to 1000 ensures enough headroom for smooth asset streaming across sector boundaries on map combos with 5+ map mods.

4.3 Recommended 4K Graphics Settings

The following settings assume a 3840 × 2160 display and a GPU with at least 8 GB of VRAM (12+ GB recommended). Set these from the in-game *Options* → *Graphics* menu.

Setting	Value	Rationale
Resolution	3840 × 2160	Native 4K baseline.
Scaling	400%	Renders each frame at 150% of 4K then downscales for superb anti-aliasing. FPS cost is high but image quality is unmatched. If performance is tight, drop to 300% or 200%.
Shadows	Ultra	Final pixel count for shadow maps. Ultra reduces aliasing on shadow edges. Minimal FPS cost on modern GPUs compared to High.
Reflection Detail	High	Cubemap resolution for truck mirrors and reflective surfaces. High is visually close to Ultra but faster.
HDR	On	Enables high dynamic range colour grading. Required for weather and Reshade mods. Disabling HDR washes out modded skyboxes and weather packs.
Anti-aliasing	MLAA	Morphological AA is lightweight and works well at 4K. TAA produces smoother motion but adds slight blur to dashboard text. Choose MLAA for sharpness or TAA for motion smoothness — not both.
Grass Density	Medium	Grass rendering at 4K is expensive. High and Ultra double vegetation draw calls. Medium looks acceptable with weather mods and recovers 5–10 FPS.
SSAO	On	Screen-space ambient occlusion adds depth to shadows under trucks and around buildings. Off makes the scene look flat. Performance cost is moderate — 2–4 FPS at 4K.
Depth of Field	Off	Blurs distant objects in photo mode. Interferes with dashboard readability and has no gameplay benefit.
Motion Blur	Off	Blurs during camera movement. Disorienting during parking manoeuvres. Keep off.
Colour Correction	On	Allows Reshade and weather mods to apply post-processing correctly. Required for modded LUTs.

4.3.1 Scaling Notes

The scaling setting is a multiplier applied to each rendered frame before downscaling to your monitor's resolution. At 400% scaling on a 4K display, the internal render target is approximately 7680 × 4320. This eliminates almost all aliasing without using aggressive post-process AA. The trade-off is significant GPU load:

Scaling	Internal Resolution	GPU Load (Relative)
100%	3840 × 2160	Baseline
200%	5430 × 3054	1.8×
300%	6653 × 3741	2.7×
400%	7680 × 4320	3.8×

If your GPU runs out of VRAM (monitored via the in-game console `r_buffer_page_size` or third-party tools), reduce scaling to 300% before lowering other quality settings.

4.4 Mod-Specific Configuration Tips

Many mods in this guide have their own configuration files, in-game menus, or console variables. Below is a summary of common per-mod settings to check after installing. Detailed instructions appear in each mod's entry in later sections.

4.4.1 Graphics & Weather Mods

- *Reshade presets*: Most require HDR to be On and Colour Correction to be On in the game's graphics settings. Disable in-game Depth of Field and Motion Blur — Reshade shaders handle these better.
- *Weather packs (Grimes seasons, Realistic Brutal Weather)*: Set *Rain Probability* to *Medium* in the mod's in-game settings if it offers one. Max rain probability increases GPU load from raindrop effects and wet-road reflections.
- *Texture overhauls (4K highway signs, realistic building textures)*: These have no configuration requirement beyond the Failed to load resource tweak above. If textures fail to load, check the game log (Failed to load resource) for Failed to load resource lines.

4.4.2 Map Mods

- *ProMods*: Requires the ProMods Definition File to be active and placed near the top of your load order (highest priority). The definition file includes options for rusmap, middle-east add-on, and ferry connections — select these during the ProMods download process before installing.
- *ProMods High Quality Add-on*: Place directly below the ProMods Definition File. Has no configurable options — it replaces ProMods default assets with higher-resolution versions.
- *RusMap*: Requires `rusmap_map` and `rusmap_map` to be loaded in that order. No in-game configuration.
- *ROEX (Realistic Overall Expansion)*: Includes a launcher executable (`ROEX Launcher.exe`) that generates a sector file. Run the launcher after installation and point it to your ETS2 install directory. The launcher patches compatibility with ProMods and RusMap.
- *Map connectors (RoExtended, ProMods-RusMap connection)*: These are single `.scs` files with no configuration. Place them in the correct load order slot as specified in the Appendices.

4.4.3 Truck Mods

- *Sound packs (Zeemod, Kriechbaum, Slavik)*: Volume levels for engine, horn, and interior sounds are adjustable per mod. Some provide a console variable (e.g., `s_engine_volume`). Others expose sliders in the truck dealer's customisation menu. Leave at default and adjust per truck.
- *Interior add-ons (SiSL's Mega Pack, Cabin Accessories)*: Configurable from the truck upgrade menu at any service station. No external config files.
- *Physics mods (realistic truck physics, tyre friction)*: Some physics mods include a `physics_config.txt` in their archive. Adjust values at your own risk — default values are balanced for the included truck mods in this guide.

4.4.4 Gameplay Mods

- *Economy re-baselines (Real Fuel Prices, Real Companies)*: These are data-only mods. No configuration. They must be placed high in the load order (near the top) so their data overrides default game data.
- *AI traffic packs (Jazzycat traffic packs, Brutal Traffic)*: The number of AI vehicles can be configured from the console via `g_traffic` (default 1.0). Increase to 1.5–3.0 for denser traffic. Higher values increase CPU load.

4.5 Verifying Configuration Changes

After editing `config.cfg` and launching the game, confirm your changes were applied:

1. Open the developer console (`~`` key).
2. Type each variable name to see its current value:
 - `r_buffer_page_size` — should display your chosen value.
 - `mm_max_resource_size` — should display your chosen value.
 - `mm_max_tmp_buffers_size` — should display your chosen value.
 - `1` — should display 1.
 - `1` — should display 1.
3. Navigate to *Options* → *Graphics* and verify that the settings from the table above match.

If any variable shows a different value, the game may have overwritten `-noworkshop` on exit. Re-open the file and confirm the line is present and not commented out. If `-noworkshop` was regenerated (e.g., after a game update or a `-noworkshop` launch parameter change), restore your backup and reapply the edits.

4.6 Troubleshooting Configuration Issues

Symptom	Likely Cause	Solution
Console does not open with	<code>1</code> or <code>1</code> not set to <code>1</code>	Verify both lines exist and are uncommented in <code>config.cfg</code> .
Game crashes on startup after config edit	Typo in <code>config.cfg</code>	Restore backup. The game is strict about quotation marks and equal signs.
Textures missing or purple	<code>mm_max_resource_size</code> too low	Increase to 50 or 60. Check Failed to load resource for Failed to load resource errors.
Stuttering when crossing map sectors	<code>r_buffer_page_size</code> too low	Increase to 50 or 100. Also verify <code>mm_max_tmp_buffers_size</code> is 1000.
Low FPS at 4K	Scaling too high or VRAM exhausted	Drop scaling to 300% or 200%. Lower Grass Density to Medium or Low.
Settings reset after closing game	In-game Options menu saved over <code>config.cfg</code>	Re-apply manual edits after changing any in-game setting. Or make all changes from

		config.cfg and avoid the Options menu for those settings.
Modded map shows black sectors	Missing map DLC or outdated ProMods definition	Verify all required DLCs are installed and ProMods definition file matches your DLC set.

5 Maps

Map mods are the backbone of any ETS2 modlist. They add thousands of kilometres of new roads, new cities, and entirely new countries to explore. At 4K resolution, map mods place the highest demand on VRAM and buffer settings — the configuration in 03-configuration.md is tuned for a heavy map combo.

5.1 Essential Map Mods

These are the core maps that form the foundation of a large map combo. All confirmed compatible with ETS2 1.60.

5.1.1 ProMods Europe 2.83 {★ Baseline}

- *Version:* 2.83
- *Source:* promods.net (free download after registration)
- *Category:* Maps

Description: The gold standard for ETS2 map mods. ProMods overhauls the entire European base map with detailed custom assets, new road networks, rebuilt cities, and thousands of kilometres of new roads. Every country in the base game is improved, and many new regions (Iceland, Faroe Islands, expanded Scandinavia, remade UK, extended Baltics) are added. ProMods also adds realistic ferry connections between many ports.

Compatibility:

- Known conflicts with: other map mods require connectors
- Required load order: *Highest priority* — place the ProMods Definition File at the top, followed by the ProMods Map package, then ProMods Media, then ProMods Models 1–3
- Required connectors: RusMap, Roextended, Poland Rebuilding, and Great Steppe all need dedicated connectors
- Middle East Addon loads below main ProMods files

Performance Impact:

- FPS cost estimate: 5–15 FPS loss in rebuilt cities; minimal impact on highways
- VRAM usage notes: 2–3 GB additional VRAM at 4K with the High Quality addon. Close to 4 GB in rebuilt urban areas.

Dependencies:

- Requires *all* map DLCs: Going East!, Scandinavia, Vive la France!, Italia, Beyond the Baltic Sea, Iberia, Road to the Black Sea, Heart of Russia, West Balkans, Greece, Nordic Horizons
- ProMods High Quality Addon (recommended, optional download from promods.net)

5.1.2 ProMods Middle East Addon 2.83

- *Version:* 2.83
- *Source:* promods.net (bundled with ProMods download)
- *Category:* Maps

Description: Official ProMods addon that extends the map into the Middle East. Covers Lebanon, Israel, Palestine, Jordan, parts of Syria, and the Sinai Peninsula. Adds cities such as Beirut, Tel Aviv, Jerusalem, Amman, and connecting highways through the region.

Compatibility:

- Known conflicts with: Project Palestine (has its own addon for this area)
- Required load order: Below all ProMods Europe files, above map connectors
- Required connectors: None for ProMods — designed as a direct addon

Performance Impact:

- FPS cost estimate: 3–5 FPS loss in dense urban areas
- VRAM usage notes: 500 MB additional VRAM

Dependencies:

- ProMods Europe 2.83
 - All map DLCs (same as ProMods)
-

5.1.3 ProMods The Great Steppe 1.6.2

- *Version:* 1.6.2
- *Source:* promods.net (separate download)
- *Category:* Maps

Description: An official ProMods addon that extends the map east into the Kazakh and Russian steppe regions. Covers parts of Kazakhstan and southern Russia with vast open landscapes, long highways, and remote settlements. Connects to Road to Caucasus and RusMap via optional connectors.

Compatibility:

- Known conflicts with: Requires careful load order with other Russian-region maps
- Required load order: Below ProMods Europe and Middle East, above connectors
- Required connectors: Road to Caucasus + ProMods The Great Steppe RC v.2.1 for Road to Caucasus compatibility

Performance Impact:

- FPS cost estimate: 3–8 FPS loss (long draw distances over flat terrain)
- VRAM usage notes: 600 MB additional VRAM

Dependencies:

- ProMods Europe 2.83
 - All map DLCs (same as ProMods)
-

5.1.4 RusMap 2.60

- *Version:* 2.60 (updated 20 June 2026)
- *Source:* ets2.lt (Download: modsfire.com)

- *Category:* Maps

Description: A long-standing map mod covering the European part of Russia (Moscow, Leningrad, Tver, Murmansk, Volgograd, Saratov, and many more regions) and the Republic of Belarus (Minsk, Brest, Vitebsk, Gomel, and others). Over 60 Russian cities and 16 Belarusian cities are represented. The map is compatible with ProMods, Roextended, SibirMap, Southern Region, and Volga Map through dedicated connectors.

Compatibility:

- Known conflicts with: Standalone — no conflicts when used with the correct connector
- Required load order: Load order: rusmap_map → rusmap_map → connectors
- Required connectors: Promods-RusMap road connection, Hybrid Plus connector for multi-map combos

Performance Impact:

- FPS cost estimate: 3–10 FPS loss (heavy vegetation and snow areas in the north)
- VRAM usage notes: 1.5 GB additional VRAM at 4K

Dependencies:

- All map DLCs recommended for full compatibility
 - ProMods 2.83 (if used in combo)
-

5.1.5 Roextended 5.2

- *Version:* 5.2
- *Source:* roextended.ro
- *Category:* Maps

Description: Roextended (ROEX) focuses on Romania, Bulgaria, Moldova, and the Black Sea region. It adds detailed recreations of cities, industrial zones, and roads in eastern Europe, with connections to ProMods and RusMap. The mod includes a launcher tool that generates a custom sector file for compatibility.

Compatibility:

- Known conflicts with: Requires connector for ProMods and RusMap combos
- Required load order: ROEX files load below ProMods, with the generated sector file highest
- Required connectors: Hybrid Plus 1-2 Road Connector v2.0, or the dedicated Promods-RusMap-ROEX connection

Performance Impact:

- FPS cost estimate: 3–8 FPS loss in built-up areas
- VRAM usage notes: 800 MB additional VRAM

Dependencies:

- All map DLCs
 - ProMods 2.83 and RusMap 2.60 (for combo usage)
 - ROEX Launcher to generate sector file
-

5.1.6 Poland Rebuilding 2.6.4

- *Version:* 2.6.4
- *Source:* polandrebuilding.pl (official download page) / [SCS Forum](#)
- *Category:* Maps

Description: A detailed rebuild of Poland that adds more cities, realistic road layouts, and improved scenery compared to the default SCS Poland. Integrates with ProMods seamlessly. Often included in big map combos alongside ProMods, RusMap, and Roextended.

Compatibility:

- Known conflicts with: Requires correct load order with ProMods
- Required load order: Below ProMods, above connectors
- Required connectors: Hybrid Plus 1-2 Road Connector v2.0 includes Poland Rebuilding support

Performance Impact:

- FPS cost estimate: 2–5 FPS loss
- VRAM usage notes: 400 MB additional VRAM

Dependencies:

- ProMods 2.83
 - All map DLCs
-

5.2 Additional Map Mods

These mods add specific regions or rebuild existing ones. Not all are compatible with every combo — check the compatibility notes.

5.2.1 Heart of Africa v1.60

- *Version:* v1.60 (updated July 2026)
- *Source:* TruckyMods
- *Category:* Maps

Description: A standalone map mod that adds regions of West and Central Africa, including Gambia, Senegal, and Liberia. Features varied terrain types such as arid deserts, dense jungles, and coastal highways. A complete departure from European driving.

Compatibility:

- Known conflicts with: Can be used alongside ProMods combos — place as a standalone profile or at the very bottom of the load order
- Required load order: Bottom of load order (standalone sector)
- Required connectors: None

Performance Impact:

- FPS cost estimate: 2–5 FPS loss (less dense than European maps)
- VRAM usage notes: 400 MB additional VRAM

Dependencies:

- All map DLCs
-

5.2.2 Road to Caucasus v2.8

- *Version:* v2.8 (updated 6 July 2026)
- *Source:* [ets2.lt](#) (Download: modsfire.com, 246 MB)
- *Category:* Maps

Description: A scenic map that covers the Caucasus region, including parts of Georgia, Russia, and the surrounding territories. Features mountain passes, Black Sea coastal roads, and cities such as Vladikavkaz and Beslan. Has dedicated connectors for ProMods and The Great Steppe.

Compatibility:

- Known conflicts with: None with correct connectors
- Required load order: Below ProMods and Great Steppe, with connectors above
- Required connectors: Road to Caucasus + Promods RC 1.8 (for ProMods 2.83 / 1.60), Road to Caucasus + ProMods The Great Steppe RC v2.1

Performance Impact:

- FPS cost estimate: 3–6 FPS loss (mountain terrain with long viewsheds)
- VRAM usage notes: 500 MB additional VRAM

Dependencies:

- All map DLCs
 - ProMods 2.83 (if using ProMods connector)
-

5.2.3 Iberia Rebuild

- *Version:* Ongoing (check mod page for latest)
- *Source:* [TruckyMods](#)
- *Category:* Maps

Description: Expands and remakes the Iberia DLC with new cities, reworked roads, and additional detail across Spain, Portugal, Andorra, and Gibraltar. Works as both a standalone enhancement and with ProMods via the dedicated "Iberia Promods Rework" version.

Compatibility:

- Known conflicts with: Portugal Rebuild (overlapping areas)
- Required load order: Above ProMods if using the ProMods version
- Required connectors: None

Performance Impact:

- FPS cost estimate: 3–8 FPS loss in rebuilt cities
- VRAM usage notes: 600 MB additional VRAM

Dependencies:

- Iberia DLC
 - ProMods 2.83 (for the ProMods-compatible version)
-

5.2.4 Portugal Rebuild

- *Version:* v01
- *Source:* [TruckyMods](#)

- *Category:* Maps

Description: A ProMods addon that recreates and improves Portugal with new logistics areas, real company branding, VTC companies, new cities, and new roads.

Compatibility:

- Known conflicts with: Iberia Rebuild (overlapping areas — choose one)
- Required load order: Below ProMods, above the ProMods Definition File
- Required connectors: None (works as a direct ProMods addon)

Performance Impact:

- FPS cost estimate: 2–5 FPS loss
- VRAM usage notes: 300 MB additional VRAM

Dependencies:

- ProMods 2.83
 - Iberia DLC
-

5.2.5 Bulgaria in Focus

- *Version:* Latest (1.60 compatible)
- *Source:* [TruckyMods](#)
- *Category:* Maps

Description: A detailed enhancement of Bulgaria that adds new cities, roads, and scenery. Reworks the default SCS Bulgaria with more realistic road layouts and additional towns.

Compatibility:

- Known conflicts with: None reported
- Required load order: Below ProMods
- Required connectors: None

Performance Impact:

- FPS cost estimate: 2–4 FPS loss
- VRAM usage notes: 200 MB additional VRAM

Dependencies:

- Road to the Black Sea DLC
-

5.2.6 Project Russia

- *Version:* Latest (1.60 compatible)
- *Source:* [TruckyMods](#)
- *Category:* Maps

Description: A high-quality map of Central Russia with detailed cities, realistic road infrastructure, and scenic landscapes. Covers territories around Moscow and surrounding regions with attention to local architecture and road signage.

Compatibility:

- Known conflicts with: RusMap (overlapping areas — not recommended to use both)

- Required load order: Below ProMods
- Required connectors: None known

Performance Impact:

- FPS cost estimate: 3–6 FPS loss
- VRAM usage notes: 500 MB additional VRAM

Dependencies:

- All map DLCs recommended
-

5.3 Connectors & Patches

Connectors are small .scs files that stitch two map mods together so roads line up and navigation works across the border. They are essential for any multi-map combo.

5.3.1 Hybrid Plus 1-2 Road Connector v2.0

- *Version:* v2.0 (updated 29 June 2026)
- *Source:* ets2.lt
- *Category:* Map Patches

Description: Road connector for the common ProMods + RusMap + Roextended + Poland Rebuilding combo. Two variants: Hybrid Plus 1 (excludes Middle East Addon) and Hybrid Plus 2 (includes Middle East Addon). Place above all four map files in the mod manager.

Compatibility:

- Game version: 1.60.x only
 - Supports: Roextended 5.2, RusMap 2.60, ProMods 2.83, Poland Rebuilding 2.6.4, Middle East Addon 2.83
-

5.3.2 Road to Caucasus + Promods RC 1.8

- *Version:* 1.8 (updated 20 June 2026)
- *Source:* ets2.lt
- *Category:* Map Patches

Description: Connects Road to Caucasus v2.8 to ProMods 2.83. Optimised for ETS2 1.60.

5.3.3 Road to Caucasus + ProMods The Great Steppe RC v2.1

- *Version:* 2.1 (updated 20 June 2026)
- *Source:* ets2.lt
- *Category:* Map Patches

Description: Connects Road to Caucasus to ProMods The Great Steppe 1.6.2. Optimised for ETS2 1.60.

5.4 Recommended Load Order

For a full map combo with ProMods, Middle East, RusMap, Roextended, and Poland Rebuilding:

Top (Highest Priority)

ProMods Definition File

ProMods High Quality Addon (optional)
ProMods Middle East Addon
RusMap Model
RusMap Map
Poland Rebuilding
Roextended (generated sector file)
Hybrid Plus Road Connector
Road to Caucasus + Connectors
ProMods Map Package
ProMods Media Package
ProMods Models 1
ProMods Models 2
ProMods Models 3
ProMods The Great Steppe
Bottom (Lowest Priority)

This order matches the standard convention used by the ProMods team and the Hybrid Plus connector. The definition file must be highest so it can define which DLC-dependent sectors are active. Model and media packages go lowest because they only supply assets.

5.5 Performance Notes at 4K

Running 5+ map mods simultaneously at 3840 × 2160 is VRAM-intensive. With all maps above active:

- *VRAM usage*: 8–12 GB at 4K with scaling at 300–400%
- *FPS range*: 30–60 FPS depending on location (urban areas are heavier)
- *Loading times*: 3–5 minutes on an NVMe SSD; 8–15 minutes on a SATA SSD

The `mm_max_tmp_buffers_size "1000"` and `mm_max_tmp_buffers_size "1000"` settings from the configuration section are strongly recommended for any multi-map combo.

If performance is a concern, start with ProMods alone, then add RusMap and the connector, and only add Roextended and Poland Rebuilding if your system has VRAM headroom.

6 Graphics Mods

Improves ETS2 visuals: textures, lighting, color grading, weather effects, and AI traffic appearance.

6.1 Project Next Gen

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	modhub.us
<i>Author</i>	modder83 (DamianSVW)
<i>Type</i>	Texture overhaul
<i>Downloads</i>	2,704

Replaces terrain, road, and building textures with high-quality (HQ) versions. Compatible with all map mods and other graphics/weather mods. Lightweight enough to stack.

Compatibility: 1.60, all map DLCs, works alongside Promods and other map mods

Performance Impact at 4K: 5% FPS loss (2-3 FPS), 500 MB additional VRAM

6.2 Nextgen Graphics Road to 2.0 Spring Update {★ Baseline}

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	modhub.us
<i>Authors</i>	Freemium, LilDame, Vary
<i>Type</i>	Comprehensive graphics overhaul
<i>Downloads</i>	416

Major update with:

- Huge textures/materials update (roads, buildings, terrain)
- New rain environment (improved puddles, reflections, wet surfaces)
- Reworked Spring Addon (greener vegetation, seasonal adjustments)
- Bugfixes for Promods Baltic DLC prefab issues, France DLC texture transitions, BLKE DLC materials

No longer requires BASE_0 and BASE_3 files. Works with map mods.

Compatibility: 1.60.x, Promods compatible

Performance Impact at 4K: 10-15% FPS loss (6-10 FPS), 1-2 GB additional VRAM

6.3 Realistic Graphics Mod (RGM)

Field	Detail
<i>Version</i>	v3.0 (latest for 1.60)
<i>Source</i>	SCS Forum, ShareMods
<i>Author</i>	Frkn64
<i>Type</i>	Comprehensive graphics overhaul

Adjusts color palettes, lighting intensity, skybox textures, and ambient light levels. Strikes a balance between realism and performance. Also includes improved sun flares, HDR bloom, and reflection tweaks.

Compatibility: 1.60, works with most map mods (load above maps)

Performance Impact at 4K: 5-8% FPS loss (3-5 FPS), 800 MB additional VRAM

6.4 JBX Graphics

Field	Detail
<i>Version</i>	v2.9 (for 1.60)
<i>Source</i>	JBX official site, ShareMods
<i>Author</i>	JBX
<i>Type</i>	Lighting + reshade preset

Premium reshade-based graphics preset. Delivers cinematic color grading, enhanced ambient occlusion, realistic bloom, and improved sky rendering.

> 💰 *Paid mod* (free demo available). Paying for graphics mods is low priority — free alternatives like Nextgen Graphics or RGM offer comparable visual quality at no cost.

Compatibility: 1.60, may conflict with other reshade presets

Performance Impact at 4K: 15-20% FPS loss (10-15 FPS), 2 GB additional VRAM

6.5 ReShade Presets (Community)

Field	Detail
<i>Version</i>	Various
<i>Source</i>	SCS Forum, TruckyMods
<i>Type</i>	Post-processing

Third-party ReShade injectors with custom presets for ETS2:

- *Realistic Color Preset* — neutralizes SCS oversaturation, adds filmic tonemapping
- *Cinematic ETS2* — adds vignette, film grain, deeper blacks
- *NVIDIA Freestyle Alternatives* — sharpening, contrast, detail enhancement

Free to use. Requires ReShade 5.x+ installation.

Compatibility: 1.60, conflicts with in-game color settings and some lighting mods

Performance Impact at 4K: 5-10% FPS loss (3-6 FPS) depending on effects enabled

6.6 Snowymoon v2

Field	Detail
<i>Version</i>	1.60.1.0s
<i>Source</i>	ets2.lt / modhub.us
<i>Author</i>	Community
<i>Type</i>	Lighting / graphics plugin (DX11)

A plugin-based graphics enhancement for ETS2 that improves lighting, colour grading, and visual clarity through DX11 injection:

- Enhanced ambient lighting and global illumination
- Improved colour grading with deeper blacks and natural highlights
- Sharper image quality with reduced haze
- Works alongside ReShade presets (load Snowymoon first)

Installation: Extract to bin\win_x64\ folder — not the mod folder. Launch with DirectX 11. Press END or CTRL+P to open the settings menu.

Compatibility: 1.60 (tested with ProMods 2.83). Compatible with most mods since it operates outside the game's mod system. Conflicts with other DX11 injectors (other TAA/SweetFX plugins).

Performance Impact: Light (2-4% FPS loss at 4K).

6.7 Project Ultimate RealEye ReShade

Field	Detail
<i>Version</i>	Latest (released July 2026)
<i>Source</i>	Boosty (paid subscription)
<i>Author</i>	AngusMay (Project Ultimate)
<i>Type</i>	ReShade preset

A premium ReShade preset from the Project Ultimate series, designed to deliver cinematic colour grading and realistic visual atmosphere:

- Custom tonemapping for natural colour reproduction
- Ambient occlusion and depth-of-field enhancements
- Cinematic bloom, glare, and lens effects
- Designed to pair with Project Ultimate Weather for a complete visual overhaul

Compatibility: 1.60. Requires ReShade 5.x+ installed. Designed to work with Project Ultimate Weather.

Performance Impact: Moderate (5-10% FPS loss at 4K depending on effects enabled).

> 💰 *Paid mod* — available via Boosty/Patreon subscription. Free ReShade alternatives (community presets) deliver solid results at no cost; paying for ReShade presets is low priority.

6.8 Summary Table

Mod	FPS Impact (4K)	VRAM Impact	Best For	Category
Project Next Gen	2-3 FPS loss	+500 MB	Light texture improvement	Textures
Nextgen Graphics	6-10 FPS loss	+1-2 GB	Full visual overhaul	Comprehensive
Realistic Graphics Mod	3-5 FPS loss	+800 MB	Balanced realism	Comprehensive
JBX Graphics	10-15 FPS loss	+2 GB	Cinematic quality	Reshade/Lighting
ReShade Presets	3-6 FPS loss	Varies	Color grading	Post-processing
Snowymoon v2	2-4 FPS loss	Minimal	Lighting/plugin	DX11 Injector
Project Ultimate RealEye	5-10 FPS loss	Varies	Cinematic ReShade	Reshade (paid)

6.8.1 Recommendation

For a 4K build with an RTX 4080 Super: *Nextgen Graphics* + *Snowymoon v2* pair well for visual quality. Add *TM Realistic Rain* from the weather section for wet-weather immersion. Avoid stacking multiple comprehensive graphics overhauls or two reshade presets simultaneously.

> *Note on paid graphics mods:* JBX Graphics and Project Ultimate RealEye are paid. Free alternatives (Nextgen Graphics, community ReShade presets) deliver comparable quality — paying for graphics is low priority.

7 Weather & Environment Mods

Overhauls ETS2 weather systems, seasonal environments, skyboxes, and vegetation. Grimes' seasonal mods form the backbone of this category, supplemented by standalone weather and vegetation improvements.

7.1 Realistic Weather System V2.9

Field	Detail
<i>Version</i>	V2.9
<i>Source</i>	TruckyMods
<i>Author</i>	Lionv8
<i>Type</i>	Weather overhaul
<i>Downloads</i>	130
<i>Size</i>	882.7 kB

A lightweight weather-only mod that completely overhauls rain and thunderstorm behaviour:

- 10 realistic and unique types of rain and thunder intensities
- Realistic thunderstorm probability based on real climate data (2000-2025)
- More raindrops on windshield with realistic textures
- Rain probabilities that respect geographical locations
- Rain/thunder intensities for summer weather patterns in Europe
- Realistic road slipperiness and wind speed
- Realistic mist and car splash effects

Compatibility: 1.60 only. NOT compatible with other weather, graphics, rain, or Grimes seasonal mods.

Performance Impact: Negligible (<2% FPS loss) — small file size, light processing overhead.

7.2 Grimes Frosty Winter v10.7

Field	Detail
<i>Version</i>	v10.7
<i>Source</i>	grimesmods.wordpress.com
<i>Author</i>	Grimes
<i>Type</i>	Seasonal weather + graphics
<i>Size</i>	3 GB

Full winter simulation for ETS2:

- Snow instead of rain, winter vegetation, snowy roofs
- Winter road textures and realistic lighting
- Winter daylight hours and temperatures
- Pedestrians in winter clothing, winter wheel spray
- Out of sight vegetation LOD transitions, reduced pop-in
- High-resolution tree models across all maps

Addons: Frosty Wheels, Clear Roads, Physics (slippery roads), Longer Daylight Hours.

Compatibility: 1.60, works with Promods, RusMap, Southern Region, all map DLCs. Place at top of Mod Manager.

Performance Impact: Heavy (15-20% FPS loss at 4K, 2-3 GB VRAM) due to high-resolution assets across entire map.

7.3 Grimes New Summer v6.7 {★ Baseline}

Field	Detail
<i>Version</i>	v6.7
<i>Source</i>	grimesmods.wordpress.com
<i>Author</i>	Grimes
<i>Type</i>	Seasonal weather + graphics
<i>Size</i>	761 MB

Improves the default summer environment:

- Vegetation improvements including increased density and variation
- Realistic lighting and smoother graphics
- Improved rain, road textures, and grass rendering
- Out of sight vegetation LOD transitions
- Low-resolution tree models replaced with high-res across maps
- More flowery vegetation and weather improvements

Compatibility: 1.60, works with Promods and all map DLCs. Disable other weather/graphics mods.

Performance Impact: Moderate (8-12% FPS loss at 4K, 1 GB VRAM).

7.4 Grimes Spring v6.6

Field	Detail
<i>Version</i>	v6.6
<i>Source</i>	grimesmods.wordpress.com
<i>Author</i>	Grimes
<i>Type</i>	Seasonal weather + graphics
<i>Size</i>	912 MB

Simulates a spring environment:

- Spring weather, vegetation, and flowery meadows
- Realistic lighting and smoother graphics
- Out of sight vegetation LOD transitions
- Less vegetation pop-in

Compatibility: 1.60, works with Promods and all map DLCs.

Performance Impact: Moderate (8-12% FPS loss at 4K, 1 GB VRAM).

7.5 Grimes Early Autumn v9.0

Field	Detail
<i>Version</i>	v9.0
<i>Source</i>	grimesmods.wordpress.com
<i>Author</i>	Grimes
<i>Type</i>	Seasonal weather + graphics
<i>Size</i>	1023 MB

Simulates an early autumn environment:

- Autumnal weather and environment
- Less leaves on trees with autumnal colours
- Realistic lighting and autumnal daylight hours
- Out of sight vegetation LOD transitions
- Improved vegetation variation across maps

Compatibility: 1.60, works with Promods and all map DLCs.

Performance Impact: Moderate (8-12% FPS loss at 4K, 1 GB VRAM).

7.6 Grimes Late Autumn/Mild Winter v6.6

Field	Detail
<i>Version</i>	v6.6
<i>Source</i>	grimesmods.wordpress.com
<i>Author</i>	Grimes
<i>Type</i>	Seasonal weather + graphics
<i>Size</i>	750 MB

Simulates a late autumn or mild winter environment:

- Leafless vegetation and seasonal weather
- Realistic lighting
- Pedestrians in winter clothing
- Late autumn/winter daylight hours
- Out of sight vegetation LOD transitions

Compatibility: 1.60, works with Promods and all map DLCs.

Performance Impact: Moderate (8-12% FPS loss at 4K, 1 GB VRAM).

7.7 Grimes Realistic Rain Reflections Addon v1.0

Field	Detail
<i>Version</i>	v1.0
<i>Source</i>	grimesmods.wordpress.com
<i>Author</i>	Grimes
<i>Type</i>	Rain/reflection enhancement

Size	10 MB
------	-------

Improves road reflections in wet conditions for Grimes seasonal mods:

- Improved wet road reflections
- Puddle effects
- Enhanced truck headlight strength for night road textures

Designed for use with New Summer, Spring, Early Autumn, and Late Autumn/Mild Winter. Do NOT use with Frosty Winter.

Compatibility: 1.60, requires one of the Grimes seasonal mods. Requires Weather Quality: Ultra, Reflection Scaling: 200%, Reflection Detail: High, Normal Maps: Enabled.

Performance Impact: Negligible (<2% FPS loss).

7.8 Weather Mod V3.8

Field	Detail
Version	V3.8
Source	mods.club
Author	juninho944
Type	Weather overhaul
Downloads	35

A standalone weather mod for 1.60.x:

- New lighting for 1.60
- New autumn addons
- Cloudier and foggy weather
- Lower temperatures
- Modified rain probability and sunset/sunrise times

Compatibility: 1.60.x.

Performance Impact: Light (3-5% FPS loss).

7.9 Grass_Tree / Autumn_ETS

Field	Detail
Version	1.0 (Autumn)
Source	SCS Forum
Author	juninho944
Type	Vegetation replacement
Size	200 MB

A vegetation overhaul mod that replaces grass and tree textures:

- Grass_Tree base mod (updates since 1.51 through 1.60)
- Autumn_ETS_1.0 addon — replaces Tree_Improved_Dry and Grass_Dry with autumn variants

- Updated vegetation colours and saturation
- High-density grass rendering

Compatibility: 1.60. Steam Workshop version available (Grass_2.91_lite, tree_improved_4k).

Performance Impact: Light (3-5% FPS loss at 4K).

7.10 PNG Autumn Addon

Field	Detail
<i>Version</i>	Included in PNG Graphics v1.15.6+
<i>Source</i>	modland.net (PNG Graphics)
<i>Author</i>	Freemium
<i>Type</i>	Seasonal weather + vegetation addon

Seasonal addon for PNG Graphics (Nextgen Graphics) that replaces summer/spring environments with autumn colours, weather, and lighting:

- Autumnal vegetation colours (orange, red, yellow foliage)
- Rebalanced lighting for shorter daylight hours
- Overcast and foggy weather suited to autumn
- Compatible with all map DLCs

Compatibility: Requires PNG Graphics / Nextgen Graphics as the base mod. Load the Autumn Addon above the base PNG files. Not compatible with other seasonal or weather overhauls (Grimes, etc.).

Performance Impact: Similar to base PNG (6-10% FPS loss at 4K depending on density).

7.11 Project Ultimate Weather 2.0

Field	Detail
<i>Version</i>	2.0
<i>Source</i>	ets3mods.com (v1.0) / Boosty (v2.0, paid)
<i>Author</i>	AngusMay (Project Ultimate)
<i>Type</i>	Weather overhaul

A custom SCS weather rework with fully custom skyboxes and atmospheric lighting:

- 8 sunny (non-rain) skyboxes and 4 overcast/rain skyboxes for natural variety
- Rebalanced HDR, bloom, colour grading, and contrast
- Improved fog and cloud formations
- v2.0 adds further refinements to sky colours, fog density, and rain consistency

Compatibility: 1.59–1.60. NOT compatible with other weather mods (Realistic Weather System, Grimes seasons, etc.). Fully compatible with PNG/Nextgen Graphics texture packs. v2.0 is exclusive to [Boosty/Patreon subscribers](#).

Performance Impact: Negligible (1-2% FPS loss) — definition-only changes, no new models.

> 💰 *Note:* v2.0 is a paid mod (Boosty/Patreon subscription). The free v1.0 is available on ets3mods.com.

7.12 TM Realistic Rain v1.1

Field	Detail
Version	v1.1
Source	ets3mods.com
Author	TM Mods
Type	Rain/weather enhancement

A standalone rain enhancement mod that reworks ETS2's rain visuals and audio:

- Ultra-realistic raindrop visuals with dynamic density and natural movement
- Improved rain sound effects with directional audio and cabin ambience
- Realistic wet road reflections, surface puddling, and dynamic water sheen
- Enhanced rain streaks on windshield with accurate wiper interaction
- Compatible with most graphics, lighting, and sound overhaul mods

Compatibility: 1.60 (reported). Works alongside most graphics and weather mods. May conflict with other rain-specific mods (Grimes Rain Reflections, Realistic Weather System).

Performance Impact: Light (2-3% FPS loss at 4K).

7.13 Summary Table

Mod	Category	Size	FPS Impact (4K)	VRAM Impact	Best For
Realistic Weather System V2.9	Weather	0.9 MB	<2%	Minimal	Realistic rain/thunder standalone
Grimes Frosty Winter v10.7	Seasonal	3 GB	15-20%	+2-3 GB	Full winter experience
Grimes New Summer v6.7 {★ Base-line}	Seasonal	761 MB	8-12%	+1 GB	Summer environment overhaul
Grimes Spring v6.6	Seasonal	912 MB	8-12%	+1 GB	Spring environment
Grimes Early Autumn v9.0	Seasonal	1023 MB	8-12%	+1 GB	Autumn environment
Grimes Late Autumn/Mild Winter v6.6	Seasonal	750 MB	8-12%	+1 GB	Late autumn / mild winter
Grimes Rain Reflections v1.0	Addon	10 MB	<2%	Minimal	Wet road reflections
Weather Mod V3.8	Weather	50 MB	3-5%	+200 MB	Lighting + fog overhaul
Grass_Tree / Autumn_ETS	Vegetation	200 MB	3-5%	+500 MB	Grass/tree textures
PNG Autumn Addon	Seasonal	Bundled	6-10%	+1-2 GB	Requires PNG/Nextgen base

Project	Ultimate Weather 2.0	Weather	53 MB	1-2%	Minimal	Paid v2.0, free v1.0 available
TM	Realistic Rain v1.1	Rain	5.5 MB	2-3%	Minimal	Standalone rain overhaul

7.13.1 Notes

- *Grimes Seasons*: Only one season can be active at a time. A Seasons Pack (\$2.99) bundles all five. Free downloads available individually via ShareMods with ads, or ad-free at \$1 each.
- *Realistic Weather System V2.9* cannot be stacked with any other weather or graphics mod — it is a complete weather replacement.
- *Fael Environment* is not available for 1.60 (latest version v3.1 supports 1.37-1.40). It has been superseded by the mods listed above.
- *Improved Weather ETS2 Edition V1.0* (by Ticreut29) is not updated for 1.60 — it targets 1.49.

8 Truck Mods

Truck mods add new drivable vehicles — from real-world brands not officially licensed in ETS2 (Mack, Peterbilt, Ford) to high-detail reworks of existing SCS trucks (Scania NG, MAN TGX, Volvo FH). This section covers standalone trucks, reworks, and interior/dashboard accessories confirmed or likely compatible with ETS2 1.60.

8.1 MAN TGX E6 by Gloover v2.2.1 {★ Baseline}

Field	Detail
<i>Version</i>	v2.2.1
<i>Source</i>	ets2mods.lt
<i>Author</i>	Gloover
<i>Type</i>	Truck rework (standalone)
<i>Category</i>	Top 5 Trucks this month (July 2026)

A detailed standalone rework of the MAN TGX EfficientLine 6, one of the most popular modern truck mods for ETS2:

- High-detail exterior with realistic proportions and MAN design language
- Multiple cabin options and chassis configurations
- Custom interior with detailed dashboard and gauges
- Optimised for ETS2 1.60 with updated definitions

Compatibility: 1.60 only. Standalone — does not replace the SCS MAN TGX.

Performance Impact: Moderate (5-8% FPS loss at 4K) due to high-poly model and interior detail.

8.2 MAN TG3 2020 by Gloover v1.8

Field	Detail
<i>Version</i>	v1.8
<i>Source</i>	ets3mods.com / modhub.us / modland.net
<i>Author</i>	Gloover

Type	Standalone truck
------	------------------

The latest MAN TG3 (2020-present) as a standalone truck from the same author (Gloover) as the baseline MAN TGX E6:

- High-detail exterior with accurate TG3 2020 design language (updated front grille, headlights, bumper)
- Multiple cabin options (GN, GM, GX) with various roof heights
- Multiple chassis configurations (4x2, 6x2, 6x4)
- Custom interior with detailed dashboard
- Compatible with the Max2712 D2676 sound pack listed in the audio section
- 1.60-compatible with updated definitions

Note: The Max2712 "2022 MAN TGX (TG3) 510 D2676 Sound Pack v1.3.2" in the audio section is designed specifically for this truck (and the SCS MAN TGX TG3). Pair them for best results.

Compatibility: 1.60. Standalone — available alongside the SCS MAN TGX.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.3 Volvo FH6 ALM Mod v1.60 {★ Baseline (alternative)}

Field	Detail
Version	v1.60
Source	ets2mods.lt
Author	ALM
Type	Truck rework (standalone)
Category	Top 5 Trucks this month (July 2026)

A comprehensive rework of the Volvo FH6 (the latest generation FH):

- Full exterior and interior rework with high-quality textures
- Multiple chassis options (4x2, 6x2, 6x4)
- Custom sound package
- Detailed dashboard with functional gauges
- I-Shift transmission support

Compatibility: 1.60 only. Standalone truck — available at Volvo dealers alongside the SCS version.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.4 Volvo FH4 Reworked

Field	Detail
Version	Latest
Source	SCS Forum
Author	Community
Type	Truck rework (standalone)

A comprehensive rework of the Volvo FH4 (2012 generation):

- Full exterior and interior overhaul with high-quality textures
- Multiple cabin options (Globetrotter, Globetrotter XL, Globetrotter XXL)
- Multiple chassis configurations (4x2, 6x2, 6x4)
- Custom dashboard with functional gauges
- I-Shift transmission support
- Compatible with Kriechbaum Volvo FH4 D13 sound pack

Compatibility: 1.60 (reported). Standalone — available at Volvo dealers.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.5 Mercedes-Benz Actros MP6 v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2mods.lt
<i>Author</i>	Various
<i>Type</i>	Truck rework (standalone)
<i>Category</i>	Top 5 Trucks this month (July 2026)

A detailed standalone version of the Mercedes-Benz Actros MP6 (the latest generation with Mirror-Cam):

- MirrorCam exterior design accurately modelled
- Multiple cabin variants
- Custom Mercedes engines and PowerShift transmissions
- Detailed interior with digital dashboard
- Realistic sounds

Compatibility: 1.60 only. Standalone truck.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.6 DAF XF 105 + Trailer “Bart De Vries” v10

Field	Detail
<i>Version</i>	v10
<i>Source</i>	modhub.us
<i>Author</i>	Community
<i>Type</i>	Standalone truck + trailer
<i>Downloads</i>	N/A

A standalone DAF XF 105 with custom Super Space Cab and a bundled Bart De Vries branded trailer:

- 6x2 Taglift chassis, PACCAR MX Euro 4 engine, ZF AS Tronic R transmission
- Exclusive Bart De Vries interior with custom salon
- Cable animations, glass stickers, strobe lights
- Personal wheels and 3 steering wheel options
- Bundled trailer with matching livery

Compatibility: 1.58–1.60 (reported working). Standalone — replaces the default DAF XF 105.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.7 Ford F-Max Special Edition v.20.08.25

Field	Detail
<i>Version</i>	20.08.25
<i>Source</i>	TruckyMods
<i>Author</i>	Emre Aydın, Bertan Baday, SimülasyonTÜRK, SiSL, brvs1nhv
<i>Type</i>	Standalone truck
<i>Downloads</i>	1,596

A high-quality standalone port of the Ford Trucks F-MAX — the 2020 International Truck of the Year — modelled from scratch:

- Original F-MAX interior and exterior faithfully recreated
- Standalone mod — found at a Ford dealer in Berlin (not compatible with ProMods)
- Original dashboard and sounds (Ford Cargo 1842T from EngineVoiceRecords)
- Skin template and catalog colour support
- SiSL Mega Pack compatible cabin accessories
- 4x2 (Normal and LL) and 6x4 chassis options
- EcoTorq 12.7L engines (500 PS, 2500 Nm) + optional tuned engines up to 900 HP
- 600L main + 450L optional fuel tank (4x2); 1250L (6x4)
- ZF 12TX2620 gearbox + optional CBV transmissions up to 18-speed
- Animated mudflaps, adjustable spoiler, customisable sunshield
- GPS navigation, internal mirror cam, alternative screen layouts
- Support for Turkish Paint Jobs Pack DLC, flag DLC, and European Logistics Companies Paint Jobs Pack

Compatibility: 1.50–1.55 listed, reported working on all game versions. Not compatible with ProMods map (dealer conflict). NOT compatible with ProMods or TruckSimMap.

Performance Impact: Moderate (5-10% FPS loss at 4K) — high-detail model with custom interior.

8.8 Iveco Hi-Way v8x4 and More

Field	Detail
<i>Version</i>	1.0
<i>Source</i>	TruckyMods
<i>Author</i>	brvs1nhv (based on work by Schumi, knox_xss, Oscar, Fabry85, and others)
<i>Type</i>	Truck rework
<i>Downloads</i>	994
<i>Rating</i>	5.0

A comprehensive rework and expansion of the Iveco Hi-Way:

- 22 chassis options including 4x2, 6x4, and 8x4
- Up to 1600L fuel tank capacity on 6x4 and 8x4 chassis

- 20 engines available, including tuned options: FNM 700 HP, FNM BR 800 HP, FNM X 900 HP (with reinforced braking)
- 18 transmissions
- Multiple new paintjobs
- Internal mirror cam and new dashboard
- New engine sounds and large readable navigation/info displays
- No-damage-data protection system
- Bundled owner trailer with skin
- Custom wheels and lights packages
- Universal fix and English city translation included

Compatibility: All game versions (reported working on 1.60). Should not conflict with other Iveco mods.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.9 Iveco S-Way Hi-Powered

Field	Detail
<i>Version</i>	1.0
<i>Source</i>	TruckyMods
<i>Author</i>	brvs1nhv (based on SoapModding, Weeda Transport)
<i>Type</i>	Truck rework
<i>Downloads</i>	589
<i>Rating</i>	5.0

A tuned and expanded version of the Iveco S-Way:

- 4 cabins and 8 chassis options (4x2, 6x2 Midlift/Taglift, 6x4 with 1400L tank)
- Cursor 9/11/13 engines + tuned FNM 11 700 HP, FNM Br V8 800 HP, FNM Xtra 900 HP
- 15 transmissions (6 to 18 speed)
- Stock and Weeda Custom interior options
- Full tuning options: lightbox, side skirts, exhaust, bumper, sunshield, bullbar
- Bundled trailer with skin
- Custom wheels and lights packs
- No-damage-data and no-dead-ends protection systems

Compatibility: All game versions (reported working on 1.60).

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.10 Renault Range T Evo by Gloover v2.4 {★ Baseline (alternative)}

Field	Detail
<i>Version</i>	v2.4
<i>Source</i>	ets3mods.com
<i>Author</i>	Gloover
<i>Type</i>	Standalone truck

Renault Range T from the same author (Glover) as the MAN TGX E6 baseline truck. Models from 2013 through 2024 with extensive customisation:

- Multiple cabin and chassis configurations
- Custom interior with detailed gauges and dashboard
- Dedicated sound package
- Separate addon pack with additional tuning parts, rims, and templates
- Performance-friendly despite high detail level

Compatibility: 1.60. Standalone — found at a Renault dealer alongside the SCS version.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.11 Peterbilt 350 v1.59–1.60

Field	Detail
<i>Version</i>	v1.59–1.60
<i>Source</i>	ets2mods.lt
<i>Author</i>	Various
<i>Type</i>	Standalone American truck for ETS2
<i>Category</i>	Top 5 Trucks this month (July 2026)

A classic American truck for ETS2 — the Peterbilt 350, a vintage model from the 1950s:

- Fully modelled exterior with classic American truck styling
- Period-appropriate interior
- Custom engines and sounds
- Available at a dedicated dealer

Compatibility: 1.59–1.60. Standalone mod.

Performance Impact: Light (3-5% FPS loss at 4K) — lower polygon count than modern trucks.

8.12 Mercedes 1632 NG v1.8+

Field	Detail
<i>Version</i>	1.8+
<i>Source</i>	TruckyMods
<i>Author</i>	Digital X (originally by Ekualizer)
<i>Type</i>	Classic truck (standalone)
<i>Downloads</i>	4,280
<i>Rating</i>	5.0

A beloved classic — the Mercedes 1632 NG (Neue Generation) from the 1980s/90s:

- 12 engines with custom soundbanks (V6, V10, V12 options by Kriechbaum)
- Multiple chassis variants (4x2, 6x4, 6x2/4, Heavy Haul 6x6)
- High-detail interior with reworked textures
- Full tuning system: bumpers, fenders, exhausts, sideskirts, lightbox, mudflaps
- AO-baked accessories and chrome/truckpaint mirror variants

- Low deck variants for 4x2, 6x4, and 6x2/4 chassis
- Window animations, reversing lights, and convoy-ready sounds

Note: Author discontinued development on June 10, 2026. Final version 1.8+ supports 1.59. Upstream source code released for community continuation.

Compatibility: Up to 1.59 (not confirmed for 1.60 — may work with minor issues).

Performance Impact: Light (3-5% FPS loss at 4K) — classic truck with moderate polygon count.

8.13 Mack Anthem

Field	Detail
<i>Version</i>	1.0
<i>Source</i>	TruckyMods
<i>Author</i>	Ea7gign
<i>Type</i>	Standalone American truck for ETS2
<i>Downloads</i>	1,145
<i>Size</i>	577.9 MB

An American classic for ETS2 — the Mack Anthem:

- 3 cabin options: Day Cab, 48" Sleeper, 70" Sleeper
- 14 chassis options
- 6 engines: Mack MP7 345 HP to Mack MP8 505 HP
- 14 gearboxes (6-speed to 18-speed)
- 4 interior options: Standard, Premium, Premium Exclusive, Ultra
- Original colour paint from Mack dealer

Compatibility: 1.44 only. *Not compatible with 1.60* — listed for reference only.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.14 Volvo VNL 1.0

Field	Detail
<i>Version</i>	1.0
<i>Source</i>	TruckyMods
<i>Author</i>	Ea7gign
<i>Type</i>	Standalone American truck for ETS2
<i>Downloads</i>	852

A conversion of the Volvo VNL (North American model) for ETS2:

- Standalone truck — available at Volvo dealer
- Ready for SiSL Mega Pack compatibility
- American-style cabin and chassis options

Compatibility: Originally released for 1.44 era. May not work on 1.60 without updates.

Performance Impact: Moderate (5-8% FPS loss at 4K).

8.15 Interior & Dashboard Accessories

These mods add cabin accessories, GPS screens, decorations, and trim options compatible with a wide range of trucks.

8.15.1 SiSL's Mega Pack

Field	Detail
<i>Version</i>	Latest
<i>Source</i>	Steam Workshop (search "SiSL's Mega Pack")
<i>Author</i>	SiSL
<i>Type</i>	Interior accessories
<i>Size</i>	1 GB

The definitive cabin accessories mod for ETS2/ATS:

- Hundreds of cabin items: plush toys, flags, GPS devices, air fresheners, dash ornaments
- Hanging accessories, dashboard items, window stickers
- Seat covers, steering wheel covers, gear knob covers
- Regularly updated alongside ETS2 game versions
- Used as a dependency by many standalone truck mods (including Ford F-Max)

Compatibility: 1.60 (Steam Workshop auto-updates). Works with any truck that supports cabin accessories.

Performance Impact: Negligible — only the items you install are loaded.

8.15.2 Black White Scania SR SCS

Field	Detail
<i>Version</i>	Latest
<i>Source</i>	TruckyMods
<i>Author</i>	tunning6000
<i>Type</i>	Interior replacement
<i>Downloads</i>	1,041

An interior replacement for the Scania NG S/R:

- Black and white colour scheme
- Custom interior trim and dashboard textures
- Compatible with SCS Scania NG S and R

Compatibility: 1.60 (reported working).

Performance Impact: Negligible.

8.15.3 ETS2 Add-On Compressors v1.7

Field	Detail
-------	--------

<i>Version</i>	v1.7
<i>Source</i>	ets2mods.it
<i>Author</i>	Various
<i>Type</i>	Exterior accessory
<i>Downloads</i>	0 (new upload July 2026)

Adds visible air compressor units to trucks as exterior tuning options:

- Multiple compressor styles and placements
- Compatible with various truck models
- Updated for 1.60

Compatibility: 1.60.

Performance Impact: Negligible.

8.15.4 50k Wheels Pack

Field	Detail
<i>Version</i>	Latest
<i>Source</i>	SCS Forum
<i>Author</i>	50k
<i>Type</i>	Wheels / rims / tyre accessory

The definitive wheels and rims pack for ETS2:

- Hundreds of custom rim designs (alloy, steel, painted, chrome)
- Multiple tyre brands and tread patterns
- Realistic wheel sizes and offsets
- Compatible with most truck mods
- Regularly updated alongside game versions

Compatibility: 1.60 (reported). Works with SCS trucks and most standalone truck mods.

Performance Impact: Negligible — texture-only, no additional geometry processing.

8.15.5 Abasstreppas LightFix Kit v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2mods.it
<i>Author</i>	Abasstreppas
<i>Type</i>	Light tuning
<i>Downloads</i>	0 (new upload July 2026)

Adds additional light mounting options and light accessories for trucks:

- Light bars, beacons, and additional headlight options
- Compatible with most truck mods

- Updated for 1.60

Compatibility: 1.60.

Performance Impact: Negligible.

8.16 Realistic Truck Physics & Handling

These mods change the way trucks feel on the road — suspension, weight transfer, braking, and tyre grip.

8.16.1 Realistic Truck Physics Mod

Field	Detail
<i>Version</i>	Various
<i>Source</i>	Steam Workshop / TruckyMods
<i>Author</i>	Various
<i>Type</i>	Physics overhaul

Mods in this category adjust:

- Suspension stiffness and damping for realistic weight transfer
- Tyre grip and friction coefficients
- Braking force and ABS behaviour
- Steering response and FFB (Force Feedback)
- Engine torque curves and gearbox behaviour

Known variants:

- *Realistic Truck Physics Mod* by Zee (Steam Workshop) — most popular, regularly updated
- *Real Steering & Physics* — lighter adjustment, retains SCS base handling

Compatibility: 1.60 (check individual mod pages for latest update). Physics mods are sensitive to game version changes.

Performance Impact: Negligible — no additional graphics load.

8.17 Scania NG Rework Ecosystem

The Scania Next Generation (2016+) platform is one of the most modded trucks in ETS2. While Eugene's famous rigid chassis addon dates back to 1.43, the ecosystem remains active through multiple mods.

8.17.1 Venus Scania NG Parts v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2mods.lt
<i>Author</i>	Venus
<i>Type</i>	Parts/tuning
<i>Published</i>	July 6, 2026

Tuning parts for the Scania NG SCS truck:

- Additional bumper designs and side skirts
- Custom exhaust options
- Light mounts and grille inserts
- Updated for 1.60 compatibility

Compatibility: 1.60.

Performance Impact: Negligible.

8.17.2 Addon Scania R/S Rear Bumper + Accessories v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2mods.it
<i>Author</i>	Various
<i>Type</i>	Tuning parts
<i>Published</i>	July 5, 2026

Rear bumper addon with integrated accessories:

- Custom rear bumper designs for Scania R/S NG
- Additional rear lights and reflector options
- Mudflap and bracket accessories

Compatibility: 1.60. Requires SCS Scania NG R/S.

Performance Impact: Negligible.

8.17.3 SRI Lightbox Pack v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2mods.it
<i>Author</i>	Various
<i>Type</i>	Light tuning
<i>Published</i>	July 5, 2026

Lightbox (roof lightbar) pack for Scania trucks:

- Multiple lightbox styles and LED configurations
- Text and logo options
- Updated for 1.60

Compatibility: 1.60. Fits Scania R/S NG.

Performance Impact: Negligible.

8.18 Summary Table

Mod	Type	1.60 Ready	FPS Impact	VRAM Impact	Notes
MAN TGX E6 by Gloover v2.2.1	Truck rework	✓ Yes	5-8%	+500 MB	★ Baseline, Top 5 this month
MAN TG3 2020 by Gloover v1.8	Standalone truck	✓ Yes	5-8%	+500 MB	Newest MAN TG3, by same author
Volvo FH6 ALM Mod v1.60	Truck rework	✓ Yes	5-8%	+500 MB	★ Baseline alternative
Volvo FH4 Reworked	Truck rework	✓ Yes	5-8%	+500 MB	Older FH generation rework
Mercedes Actros MP6 v1.60	Truck rework	✓ Yes	5-8%	+500 MB	MirrorCam included
DAF XF 105 Bart De Vries v10	Standalone truck	✓ Yes	5-8%	+500 MB	Bundled trailer, custom interior
Renault Range T Evo v2.4	Standalone truck	✓ Yes	5-8%	+500 MB	★ Baseline alt, by Gloover, massive tuning
Ford F-Max Special Edition	Standalone truck	✓ Yes	5-10%	+600 MB	High detail, IC-COTY 2020
Iveco Hi-Way v8x4	Truck rework	✓ Yes	5-8%	+400 MB	22 chassis, 20 engines
Iveco S-Way Hi-Powered	Truck rework	✓ Yes	5-8%	+400 MB	Tuned engines included
Peterbilt 350	Standalone (classic)	✓ Yes	3-5%	+200 MB	Vintage American truck
Mercedes 1632 NG v1.8+	Classic truck	⚠ 1.59	3-5%	+300 MB	Discontinued, community may continue
Mack Anthem	American truck	✗ 1.44	5-8%	+500 MB	Too old for 1.60
Volvo VNL 1.0	American truck	✗ 1.44	5-8%	+500 MB	Too old for 1.60
SiSL's Mega Pack	Interior accessories	✓ Yes	<1%	Minimal	Essential for cabin customisation
50k Wheels Pack	Wheels / rims	✓ Yes	<1%	Minimal	Definitive wheel pack
Realistic Truck Physics	Physics	Check version	<1%	None	Steam Workshop recommended

8.18.1 Notes

- *Standalone vs replacement:* All truck mods listed are standalone — they add a new truck alongside SCS defaults rather than replacing them. You can own both.

- *Mod dealer purchases*: Many truck mods use a separate “Mod Dealer” location for purchases rather than the standard brand dealer.
- *ProMods compatibility*: Map mods like ProMods can conflict with truck dealer locations (e.g., Ford F-Max’s Berlin dealer). Check compatibility before combining.
- *Load order*: Truck mods generally go anywhere in the mod manager — they do not depend on specific load order positions unless stated otherwise. Place above map mods if using a combined profile.
- *Sound banks*: Some truck mods (Mercedes 1632 NG, Ford F-Max) include separate sound bank downloads or optional sound files. Read the mod description carefully.
- *Physics mods*: Only one physics mod should be active at a time. Stacking physics mods causes unpredictable handling.
- *Scania NG parts*: The Venus, Rear Bumper, and SRI Lightbox mods are tuning-only additions for the SCS Scania NG. They can be combined freely.

9 Audio Mods

Enhances ETS2 audio: engine sounds, ambient/environment audio, UI sounds, horn packs, and comprehensive sound fixes.

9.1 Sound Fixes Pack {★ Baseline}

Field	Detail
<i>Version</i>	v26.34
<i>Source</i>	ets2mods.lt
<i>Author</i>	Drive Safely
<i>Type</i>	Comprehensive sound overhaul
<i>Last Updated</i>	May 27, 2026

The essential foundation for any audio mod setup. Replaces and enhances hundreds of vanilla sounds across AI traffic, environments, and UI without touching player truck sounds:

- Engine and horn sounds for AI traffic vehicles (including Scania Citywide, buses, tractors)
- Wet tire sounds during rain for trailers in AI traffic
- Cleaner game log (fewer nameless variant warnings than vanilla)
- Improved mixing for standalone air horns in Service Shops
- Music track probability balancing in AI traffic vehicles
- Compatible with all maps, trucks, and an unlimited number of truck sound mods

Compatibility: ETS2 1.59+ (requires update for 1.60), all map DLCs, works with Promods and all maps. Must have high priority in Mod Manager (above rain sound mods, AI traffic mods, and map mods). Supported in Convoy mode.

Performance Impact: Negligible (<1% FPS loss) — only replaces audio banks, no visual processing.

9.2 SFX Engine Sound Packs (Kreichbaum-style)

High-quality studio-recorded engine sound replacements for specific trucks, by creator “Max2712” (SFX series).

9.2.1 2022 MAN TGX (TG3) 510 D2676 Sound Pack v1.3.2

Field	Detail
Version	v1.3.2
Source	ets2mods.lt
Author	Max2712
Type	Engine sound replacement
Last Updated	July 10, 2026

Studio-quality sound samples recorded on a real 2022 MAN TGX 18.510 with stock 12.4L MAN D2676 Euro 6e engine. Replaces D2676 and D3876 engine sounds for SCS MAN TGX (TG3) and Gloover's MAN TG3 2020. Includes standalone D2676 510hp engine with realistic torque curves, real engine parameters, and matching ZF Traxon gearbox with 5 differential ratios (2.31–3.08).

Compatibility: ETS2 1.60

Performance Impact: Negligible

9.2.2 SFX Renault Range T DTi460 Euro6C v2.05.1

Field	Detail
Version	v2.05.1
Source	ets2mods.lt
Author	Max2712
Type	Engine sound replacement
Last Updated	July 1, 2026

Compatibility: ETS2 1.60

Performance Impact: Negligible

9.2.3 SFX Volvo FH13 D13K 500 Euro6 v2.47.1

Field	Detail
Version	v2.47.1
Source	ets2mods.lt
Author	Max2712
Type	Engine sound replacement
Last Updated	June 7, 2026

Compatibility: ETS2 1.60

Performance Impact: Negligible

9.2.4 SFX Scania R410 DC13.115 Euro6 v1.29.1

Field	Detail
Version	v1.29.1
Source	ets2mods.lt
Author	Max2712

<i>Type</i>	Engine sound replacement
<i>Last Updated</i>	June 7, 2026

Compatibility: ETS2 1.60

Performance Impact: Negligible

9.3 Scania V8 Stock Sound v12.0

Field	Detail
<i>Version</i>	v12.0
<i>Source</i>	ets2mods.it
<i>Author</i>	Slav Jerry
<i>Type</i>	Engine sound replacement (V8)
<i>Last Updated</i>	May 29, 2026

Authentic Scania V8 stock sound for all SCS/Eugene and RJS Scania's (excluding P and G series). Supports:

- DC16 V8 480-580hp (4 Series)
- DC16 V8 500-730hp (5-6 Series)
- DC16 V8 520/580/730hp (6 Series Euro 6 & Euro 5 EEV)
- DC16 V8 520-770hp (NG Scania)
- DSC14 V8 460-530hp (4 Series)
- Opticruise shifting and retarder sounds
- Gearbox whine, engine fan, interior insulation effects
- Sound attenuation for realistic fade-off at a distance

Compatibility: ETS2 1.59 (likely compatible with 1.60 with testing)

Performance Impact: Negligible

9.4 Kriechbaum Sound Packs

Kriechbaum is one of the most well-known ETS2 sound mod creators, producing high-fidelity engine recordings. His mods are typically per-engine/per-truck. Below are the packs available on ets2mods.it:

9.4.1 Kriechbaum DAF Paccar MX-13 Sound v3.0

Field	Detail
<i>Version</i>	v3.0
<i>Source</i>	ets2mods.it
<i>Author</i>	Kriechbaum
<i>Type</i>	Engine sound replacement
<i>Released</i>	June 2023 (v3.0)

High-quality Paccar MX-13 engine sound for DAF trucks. Requires confirmation of 1.60 compatibility — older versions may need manual adaptation.

Compatibility: Listed for 1.47 — may require updates for 1.60

Performance Impact: Negligible

9.4.2 Kriechbaum Volvo FH4 D13 Sound v1.1

Field	Detail
<i>Version</i>	v1.1
<i>Source</i>	ets2mods.it
<i>Author</i>	Kriechbaum
<i>Type</i>	Engine sound replacement
<i>Released</i>	January 2024

D13 engine sound replacement for SCS Volvo FH4.

Compatibility: Listed for 1.49 — may require updates for 1.60

Performance Impact: Negligible

9.4.3 Scania NG Tcab L6 Openpipe Kriechbaum Adaptation

Field	Detail
<i>Version</i>	v1.0
<i>Source</i>	ets2mods.it
<i>Author</i>	Community adaptation
<i>Type</i>	Engine sound adaptation
<i>Released</i>	March 2023

Adaptation of Kriechbaum's Scania L6 Open Pipe sound to SCS Scania NG Tcab base.

Compatibility: Listed for 1.46 — requires updates for 1.60

Performance Impact: Negligible

9.5 Scania NextGen 660 DC16 V8 Sound Pack v1.3

Field	Detail
<i>Version</i>	v1.3
<i>Source</i>	ets2mods.it
<i>Author</i>	Community
<i>Type</i>	Engine sound replacement (V8)
<i>Last Updated</i>	May 28, 2026

Compatibility: Listed for 1.59 — likely compatible with 1.60

Performance Impact: Negligible

9.6 Volvo FH5 I-Save 500 D13TC Sound Pack v1.3

Field	Detail
<i>Version</i>	v1.3

Source	ets2mods.it
Author	Community
Type	Engine sound replacement
Last Updated	May 24, 2026

Compatibility: Listed for 1.59 — likely compatible with 1.60

Performance Impact: Negligible

9.7 Notes on Other Audio Mods

Mod Type	Availability for 1.60
<i>Radio/Music addon packs</i>	Limited on ets2mods.it — most are outdated (1.36–1.38). TruckyMods/modhub.us listings unavailable via browser due to 404/blocking. Radio station mods are typically .live and .pls files that don't require game version updates.
<i>Ambient/Environment sound overhauls</i>	Most on ets2mods.it are outdated (1.31–1.36). "Realistic City Ambient & Sounds v1.1" from 2020 (1.36.x). Check SCS Forum or TruckyMods for 1.60-compatible alternatives.
<i>Horn packs</i>	Included in Sound Fixes Pack (standalone "Nostalgia" air horn). Dedicated horn packs: not widely listed on ets2mods.it — check TruckyMods/modhub.us.
<i>UI sound replacements</i>	Not commonly distributed as standalone mods. Sound Fixes Pack covers UI improvements.
<i>Improved Environment Sound</i>	Last version v1.5 from 2016 (1.22.x). Archived/unmaintained.
<i>Real Environment Sound</i>	v1.0 from 2018 (1.31.x). Archived/unmaintained.

9.8 Recommended Load Order

HIGH PRIORITY

Sound Fixes Pack (above rain sound mods, AI traffic mods, map mods)

|

v

Truck engine sound packs (no conflict with Sound Fixes Pack)

|

v

LOW PRIORITY (below map mods)

9.9 Summary

Mod	1.60	Type	Performance
Sound Fixes Pack v26.34	Partial (advertised for 1.59, pending update)	Comprehensive	Negligible
2022 MAN TGX D2676 Sound Pack v1.3.2	Yes	Engine (MAN TGX)	Negligible
SFX Renault Range T DTi460 v2.05.1	Yes	Engine (Renault)	Negligible

SFX Volvo FH13 D13K v2.47.1	Yes	Engine (Volvo)	Negligible
SFX Scania R410 DC13.115 v1.29.1	Yes	Engine (Scania)	Negligible
Scania V8 Stock Sound v12.0	Partial (1.59)	Engine (Scania V8)	Negligible
Scania NextGen 660 DC16 V8 v1.3	Partial (1.59)	Engine (Scania NG V8)	Negligible

Kriechbaum Paccar MX-13 v3.0	Unknown (1.47)	Engine (DAF)	Negligible
Kriechbaum Volvo FH4 D13 v1.1	Unknown (1.49)	Engine (Volvo FH4)	Negligible

10 Gameplay & Role-Playing Mods

Gameplay mods transform ETS2 from a driving simulator into a deeper role-playing experience. This section covers economy overhauls, traffic AI improvements, company management tools, and quality-of-life enhancements that add realism, challenge, and immersion to every trip.

10.1 Economy & Financial Mods

Economy mods adjust the core financial simulation — fuel costs, tolls, maintenance, bank loans, and income progression — to create a more realistic (or more challenging) business environment.

10.1.1 TDS ECO Grand Garage (Unofficial) v1.0 {★ Baseline}

Field	Detail
<i>Version</i>	v1.0
<i>Source</i>	ets2mods.lt
<i>Author</i>	Unknown (unofficial port)
<i>Type</i>	Economy modifier / garage management
<i>Category</i>	Others

An unofficial update of the TDS ECO system, rebalancing garage purchase costs, maintenance fees, and loan parameters for a more realistic economy:

- Adjusted garage purchase prices to reflect real-world property values
- Modified maintenance costs based on truck mileage and age
- Rebalanced loan interest rates and repayment terms
- Tied income more closely to distance, cargo type, and delivery urgency

Role-Playing Potential: High — forces players to think like a fleet owner, balancing garage expansion against operating costs. Each new truck becomes a meaningful investment decision rather than an impulse purchase.

Compatibility: 1.60 (reported). May conflict with other economy-modifying mods.

Performance Impact: Negligible — no graphics changes.

10.1.2 Realistic Economy Mods (General)

Many standalone economy mods are available for 1.60. Common features include:

- *Realistic fuel costs* — diesel prices fluctuate by region
- *Toll road costs* — adjusted to European norms (€0.10–0.30/km)
- *Maintenance schedules* — trucks require servicing every 15,000–30,000 km
- *Bank loans* — realistic interest rates and approval criteria based on company value
- *Cargo income* — rebalanced so urgent/oversized cargo pays a genuine premium

Notable economy mods compatible with 1.60:

Mod	Source	Notes
<i>Realistic Economy by Quper</i>	TruckyMods	30k downloads, 4.7★, updated to 1.60.1. Comprehensive: fuel, loans, fines, cargo income, ferry costs, used truck market.
<i>Realist Economy by Michelle Raouf</i>	TruckyMods	Hardcore-focused: garage prices, AI driver salaries, dynamic insurance, progressive fines, permanent vehicle wear.
<i>Realistic and Hard Economy</i>	modhub.us	Banking overhaul, police penalties scaled to income, ferry/train fares revised. Last updated for 1.59.

Note: Economy mods are sensitive to game updates and each other. Only one economy-modifying mod should be active per profile.

Role-Playing Potential: Very High — a realistic economy turns every delivery into a financial decision. Players must choose routes carefully, maintain their truck proactively, and grow their company organically.

10.2 Traffic & AI Mods

Traffic mods change how AI vehicles behave on the road — density, speed, variety, and driving style.

10.2.1 EXPRESS PERFORMANCE MOD — Realistic Rush-Hour Traffic + FPS Boost v1.0

Field	Detail
<i>Version</i>	v1.0
<i>Source</i>	modhub.us
<i>Author</i>	Express Mods & Tips
<i>Type</i>	Traffic density + performance
<i>Category</i>	Other
<i>Downloads</i>	59

A hybrid mod that replaces vanilla flat traffic density with realistic 24-hour traffic curves while improving FPS:

- *8-point hourly density curves* — morning rush 6:30–9:00, evening rush 16:30–19:00
- *Night traffic* — near-empty motorways at 3 AM (only long-haul trucks remain)
- *Big-city density rebalanced* — eliminates the worst FPS drops in urban areas

- *AI vehicle cap reduced* — 50 → 35 (direct CPU relief)
- *Spawn distance* — 600m → 500m, despawn 700m → 650m
- *Rain probability* — cut 4x (heavy rain is the 1 GPU spike in ETS2)
- *Detail grass* — scaled to 40% density, draw distance 105m → 80m
- 100% definition overrides — no physics, economy, or save-game edits

Role-Playing Potential: High — realistic traffic patterns create authentic driving conditions. Morning rush through Berlin feels genuinely different from a 2 AM motorway run, rewarding players who plan routes around traffic.

Compatibility: ETS2 1.60.x / 1.61. Compatible with truck, trailer, sound, and map mods. Load near bottom of mod list.

Performance Impact: Positive — +25–45% FPS in big cities (measured with included config tweaks).

Notes: Includes a bonus config.cfg tweak guide for mirror rendering settings that further improves FPS.

10.2.2 Brutal Traffic v8.1 {★ Baseline}

Field	Detail
<i>Version</i>	v8.1
<i>Source</i>	modhub.us
<i>Author</i>	Kass (uploaded by Cruiser)
<i>Type</i>	AI traffic behavior + density
<i>Category</i>	Traffic
<i>Downloads</i>	16

Re-engineers AI traffic behavior and density:

- Realistic traffic jams and congestion
- Weather-reactive AI (slower speeds in rain, cautious behavior)
- Refined lane changing and overtaking
- Day/night traffic density cycles
- Road traffic accidents and custom events
- Reduced truck/bus ratio for realism
- Compatible with any AI traffic vehicle packs

Role-Playing Potential: High — realistic traffic density and AI behavior make every trip feel alive. Rush hour congestion forces route planning, and weather-reactive AI adds an extra layer of caution in poor conditions.

Compatibility: 1.60, all maps and DLCs, works with AI traffic packs

Performance Impact: Negligible (<2% FPS loss) — optimized traffic CPU usage, minimal VRAM impact.

10.2.3 AI Traffic Pack v2.5 {★ Baseline}

Field	Detail
<i>Version</i>	v2.5

Source	modhub.us
Author	Community
Type	AI traffic variety
Category	Other
Downloads	572

Adds a wide variety of real-world vehicles to AI traffic, replacing the vanilla car/truck mix with brand-specific models:

- Real car brands and models in traffic (European market focus)
- Real truck liveries on AI trucks
- Additional bus and van variants
- Optional trailer traffic

Role-Playing Potential: Medium — seeing familiar real-world brands on the road increases immersion and makes European highways feel authentic.

Compatibility: Check mod page for latest game version support.

Performance Impact: Moderate (3-8% FPS loss) due to additional vehicle models in traffic. Use alongside performance-focused traffic density mods.

10.2.4 Real Traffic Density (Steam Workshop)

Field	Detail
Version	Ongoing (Steam Workshop auto-updates)
Source	Steam Workshop (search "Real Traffic Density")
Author	Various
Type	Traffic density modifier

Adjusts AI traffic density based on region, time of day, and road type:

- Higher traffic density near major cities and on motorways
- Lower density on rural roads and during night hours
- Realistic AI behaviour — lane changes, merging, speed adjustments
- Compatible with most AI traffic vehicle packs

Role-Playing Potential: Medium-High — creates believable traffic patterns that reward situational awareness. Navigating rush-hour roundabouts requires genuine skill.

Compatibility: Check Steam Workshop for latest version. Generally updated alongside game patches.

Performance Impact: Low-Moderate. Depends on configured density multipliers.

10.3 Role-Playing & Company Management

These mods add depth to the business simulation and company management aspects of ETS2, transforming the game into a more immersive role-playing experience.

10.3.1 New Service v1.6

Field	Detail
<i>Version</i>	Various
<i>Source</i>	modhub.us
<i>Author</i>	Community
<i>Type</i>	Company management / gameplay
<i>Category</i>	Other
<i>Downloads</i>	1,202

Adds a new company management layer, enabling players to create and manage their own logistics service:

- Create named companies with custom branding
- Hire and manage drivers with individual performance stats
- Track company finances beyond the basic garage view
- Assign specific trucks to specific drivers
- View detailed trip histories and profit/loss reports

Role-Playing Potential: Very High — transforms ETS2 into a logistics tycoon game. Players build a trucking empire from the ground up, making hiring, routing, and investment decisions that matter.

Compatibility: Check mod page for current game version.

Performance Impact: Negligible.

10.3.2 TruckersMP (Multiplayer Mod)

Field	Detail
<i>Version</i>	Latest
<i>Source</i>	truckersmp.com
<i>Author</i>	TruckersMP Team
<i>Type</i>	Multiplayer / role-playing
<i>Category</i>	External platform

The largest multiplayer platform for ETS2 and ATS. While primarily a multiplayer mod, TruckersMP has spawned a massive role-playing community:

- Synchronised convoy driving with hundreds of players
- Dedicated role-playing servers with enforced traffic laws
- Virtual trucking companies (VTCs) with real-world organisational structures
- Convoy events, cargo runs, and company recruitment
- Police-style moderation on some servers (speed limits, reckless driving penalties)

Role-Playing Potential: Maximum — the entire platform is built around role-playing. Players join VTCs with ranks, schedules, and responsibilities. Some VTCs require weekly delivery quotas, use real logistics software (Trucky, TrucksBook), and hold company convoys.

Compatibility: Maintained alongside ETS2 updates. Requires separate launcher and account. Not compatible with map mods that alter the base game map significantly (ProMods support is available on specific servers).

Performance Impact: CPU-dependent — render distance for other players can impact FPS in high-density areas (Duisburg, Calais).

Performance Warning: Known for performance issues in high-density areas. Ensure you have a stable internet connection and adequate CPU for multiplayer traffic.

10.3.3 SiSL's Route Advisor {★ Baseline}

Field	Detail
<i>Version</i>	Latest
<i>Source</i>	Steam Workshop (search "SiSL's Route Advisor")
<i>Author</i>	SiSL
<i>Type</i>	Navigation / UI
<i>Category</i>	QoL

An enhanced navigation and information display for ETS2/ATS. Not to be confused with SiSL's Mega Pack (cabin accessories):

- Customisable route advisor display with multiple skins and layouts
- Additional information panels: fuel, time, damage, income breakdown
- Zoomable map with real-time traffic information
- Configurable keyboard shortcuts for quick-access information toggles
- Compatible with all trucks and most map mods

Role-Playing Potential: Medium — enhances immersion by providing professional-grade navigation information. The customisable layouts let players set up a dashboard that feels like a real truck's info system.

Compatibility: Steam Workshop auto-updates for latest ETS2 versions.

Performance Impact: Negligible.

10.3.4 Real Company Skins & Logistics Liveries {★ Baseline}

Type	Description
<i>Real Company Skins</i>	Replaces vanilla company logos and liveries on buildings, trailers, and delivery points with real European logistics brands (Lidl, Carrefour, DSV, DB Schenker, Waberer's, etc.)
<i>Traffic Company Skins</i>	Adds real company liveries to AI traffic trucks
<i>Logistics Brand Packs</i>	Multi-brand packs covering dozens of European logistics companies

These mods do not change gameplay mechanics but dramatically increase immersion by replacing SCS's fictional companies with recognisable real-world brands.

Role-Playing Potential: High — delivering for a real brand you recognise from the motorway adds a powerful sense of authenticity. Role-playing as a driver for Waberer's or DSV feels more meaningful with correct branding.

Compatibility: Varies by pack. Most are definition-only and survive game updates well.

Performance Impact: Negligible.

10.3.5 Parking Enforcement & Police Mods

Mod Type	Description
<i>Police Traffic Enforcement</i>	Adds police vehicles that monitor traffic, issue fines for speeding/red-light violations
<i>Parking Enforcement</i>	Requires proper parking at delivery points — fines for blocking traffic or incorrect parking
<i>Speed Camera Mods</i>	Adds fixed and mobile speed cameras on motorways and in cities, with realistic fine amounts

These mods add consequences for poor driving, encouraging more careful and realistic behaviour.

Role-Playing Potential: Very High — transforms every delivery into a genuine exercise in professional driving. Knowing a police car might be around the next corner changes how you approach roundabouts, speed limits, and parking.

Compatibility: Check individual mod pages for 1.60 compatibility. Speed camera mods are typically definition-based and survive updates well.

Performance Impact: Negligible.

Note: Police/parking enforcement mods require a compatible economy mod to process fines. Ensure fine amounts are balanced with your chosen economy mod.

10.4 Quality-of-Life & Dashboard Mods

These mods improve the driving interface, dashboard information, and overall user experience.

10.4.1 Iveco S-Way Improved Dashboard v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2mods.it
<i>Author</i>	Community
<i>Type</i>	Dashboard replacement
<i>Category</i>	Others

An improved dashboard display for the Iveco S-Way (SCS version):

- Redesigned digital dashboard with clearer gauges and information layout
- Larger readable navigation/info displays
- Improved colour scheme for day and night driving
- Additional information panels for fuel economy and trip data

Role-Playing Potential: Medium — a more realistic, readable dashboard enhances the feeling of driving a modern truck. Useful for interior-camera drivers.

Compatibility: 1.60. Requires SCS Iveco S-Way.

Performance Impact: Negligible.

10.4.2 Collision Model Mod v1.60 {★ Baseline}

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	modhub.us
<i>Author</i>	Community
<i>Type</i>	Physics / gameplay
<i>Category</i>	Other
<i>Downloads</i>	100

Adjusts the collision model for tighter, more realistic hitboxes on trucks and trailers:

- More precise collision detection on trailers
- Realistic damage zones — scraping a barrier scratches the paint, hard impacts cause structural damage
- Adjusted trailer coupling physics for more realistic connection behaviour
- Rebalanced damage costs to align with a realistic economy

Role-Playing Potential: High — careful driving becomes genuinely rewarding when minor scrapes have visible consequences and repair costs. Encourages realistic parking and manoeuvring.

Compatibility: 1.60. Place in high priority in mod manager.

Performance Impact: Negligible — no graphics changes.

10.4.3 Animated Steering Wheel v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	modhub.us
<i>Author</i>	Community
<i>Type</i>	Animation / QoL
<i>Category</i>	Other
<i>Downloads</i>	36

Adds animated steering wheel movement visible from the exterior camera view:

- Steering wheel rotates realistically when viewed from outside the truck
- Driver's hands visible on the wheel
- Works with all SCS trucks
- Compatible with most truck mods that use SCS animation skeletons

Role-Playing Potential: Low-Medium — purely cosmetic but adds immersion for players who use external cameras. More impactful for content creators recording cinematic shots.

Compatibility: 1.60.

Performance Impact: Negligible.

10.4.4 Ferry Plus v5.0.1

Field	Detail
<i>Version</i>	v5.0.1
<i>Source</i>	ets2mods.lt
<i>Author</i>	ProMods Team, T0b1
<i>Type</i>	Map / travel
<i>Category</i>	Others

Adds 54 new ferry connections across Europe:

- Connects previously unserved port cities
- Shortcuts that reduce long detours around sea crossings (e.g., Baltic to Mediterranean)
- Requires ProMods Map v2.83, ProMods Middle-East Add-on v2.83, and ProMods Maghreb v1.0.3 for full routes
- Partial ferry set works with subset of ProMods add-ons

Role-Playing Potential: Medium — realistic ferry routes let players plan authentic European road trips. Rolling onto a ferry in Helsinki and off in Travemünde feels like a real logistics route.

Compatibility: Requires ProMods ecosystem. v5.0.1 compatible with ProMods 2.83.

Performance Impact: Negligible.

Note: Only useful with ProMods map mods. Ferry connections are static data, no performance impact.

10.4.5 Realistic Scania SmartDash v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	modhub.us
<i>Author</i>	Community
<i>Type</i>	Dashboard replacement
<i>Category</i>	Other
<i>Downloads</i>	65

Replaces the Scania NG digital dashboard with a realistic SmartDash display:

- Accurate Scania SmartDash layout and graphics
- Realistic gauge needles and indicator lights
- Improved readability in direct sunlight and at night
- ADAS-style driver assist information panel

Role-Playing Potential: Medium — an authentic SmartDash display makes Scania NG drivers feel like they're sitting in a real Next Generation Scania.

Compatibility: 1.60. Requires SCS Scania NG S/R.

Performance Impact: Negligible.

10.4.6 Indonesia Gameplay Mods v1

Field	Detail
Version	v1
Source	modhub.us
Author	Community
Type	Gameplay overhaul package
Category	Other
Downloads	830

A comprehensive gameplay overhaul package including multiple interconnected gameplay changes:

- Modified economy parameters for a more challenging financial progression
- Adjusted AI traffic behaviour and density
- Changed toll and fuel costs
- New cargo types and delivery weight distributions
- Modified fatigue and rest stop requirements

Role-Playing Potential: High — a one-package solution for a complete gameplay overhaul. Good for players who want a single mod to transform the experience rather than juggling multiple individual mods.

Compatibility: Check mod page for latest game version.

Performance Impact: Low-Moderate. Traffic changes may have minor FPS impact.

10.5 World Details & Immersion

World detail mods replace fictional in-game brands, logos, and signage with real-world equivalents. They do not change gameplay mechanics but dramatically increase the sense of driving through a real European landscape.

10.5.1 Real Company Logo v3.4 {★ Baseline}

Field	Detail
Version	v3.4
Source	ets2.lt
Author	Schumi
Type	World detail / company replacement
Category	Map addon

Replaces 165+ fictional SCS companies and gas stations with real-world brands:

- *Fuel stations*: Shell, BP, Esso, Total, Q8, Aral, Ingo, St1, MOL, EKO, OK, TQG, and others — regionally accurate per country
- *Company buildings*: Real logos on warehouses, depots, and delivery points (Nestlé, IKEA, Remondis, Coca-Cola, and many more)
- *Road signs*: Ika Bohag replaced with IKEA, directional signage corrected
- *Addon for SCS Map* — works on the default map and all DLCs

Role-Playing Potential: High — pulling into a Shell station in Germany or seeing a Coca-Cola depot in France makes the world feel authentic in a way fictional brands never can.

Compatibility: 1.60.x, requires all map DLCs. Load above the main map mod in Mod Manager. Incompatible with other company replacement mods (pick one).

Performance Impact: Negligible — texture and definition only, no new models.

10.5.2 License Plates 3 by JmZ

Field	Detail
<i>Version</i>	Latest
<i>Source</i>	catalogue.smods.ru (mirror: modsbases.com)
<i>Author</i>	JmZ
<i>Type</i>	World detail / license plate replacement
<i>Category</i>	Map addon

Replaces vanilla license plates on trucks, trailers, and AI traffic with realistic European plate designs:

- Country-specific license plate formats (DE, FR, IT, PL, CZ, NL, BE, AT, ES, UK, and many more)
- Realistic EU blue stripe with country code
- Proper font, spacing, and plate dimensions per country
- Applies to player trucks, AI traffic, and all trailers
- Works alongside Real Company Logo and other world detail mods

Role-Playing Potential: Medium — subtle but noticeable immersion boost. Seeing a Polish-registered truck with correct plates alongside a Dutch one reinforces the feeling of a real European road network.

Compatibility: 1.60 (reported). Works alongside Real Company Logo, company skins, and most graphics/weather mods. Load in the world details section of Mod Manager.

Performance Impact: Negligible — texture replacement only.

10.6 Load Order & Compatibility

HIGH PRIORITY

```

Collision Model Mod
Dashboard replacements (Iveco, Scania SmartDash, etc.)
Animated Steering Wheel
|
v
World Details & Immersion (Real Company Logo, License Plates 3 – above map mods)
Economy mods (only one)
Traffic density / AI traffic mods
Real company skins & logistics liveries
|

```

v
 Ferry Plus (above map mods)
 Indonesia Gameplay Mods (if using)
 |
 v

LOW PRIORITY

Brutal Traffic (traffic packs at bottom – lowest priority within gameplay)
 EXPRESS PERFORMANCE MOD (near bottom)
 Police / parking enforcement mods (lowest priority)

10.6.1 Key Rules

- *Only one economy mod per profile* — stacking economy mods causes unpredictable income and cost calculations.
- *Traffic density + AI vehicle packs* can be combined (density mod above, vehicle pack below).
- *Police/parking enforcement* mods go last in load order — they need to override all other traffic definitions.
- *Dashboard mods* are truck-specific and only affect their target truck. Use freely with any other mods.
- *Ferry Plus* requires ProMods — place above ProMods map files in load order.

10.7 Summary Table

Mod	Type	1.60 Ready	FPS Impact	RP Potential	Notes
TDS ECO Grand Garage	Economy	✔ Yes	Negligible	High	Unofficial port, economy re-balance
EXPRESS PER- FORMANCE MOD	Traffic + FPS	✔ Yes	+25–45%	High	Rush-hour curves, CPU relief
Brutal Traffic v8.1	Traffic behav- ior	✔ Yes	<2%	High	Realistic AI, weather-reac- tive
AI Traffic Pack v2.5	Traffic variety	Check mod page	–3–8%	Medium	Real vehicle models
Real Traffic Density	Traffic density	✔ Yes	Low-Moder- ate	Medium-High	Steam Work- shop
New Service	Company mgmt	Check mod page	Negligible	Very High	Logistics man- agement
TruckersMP	Multiplayer	✔ Yes	CPU-bound	Maximum	External plat- form
SiSL's Route Advisor	Navigation	✔ Yes	Negligible	Medium	Enhanced UI
Real Company Skins	Skins	✔ Yes	Negligible	High	Immersion boost
Police En- forcement	Enforcement	Check mod page	Negligible	Very High	Requires economy mod

Collision Model Mod	Physics	✓ Yes	Negligible	High	Realistic damage
Animated Steering Wheel	Animation	✓ Yes	Negligible	Low-Medium	Cosmetic only
Ferry Plus v5.0.1	Travel	✓ Yes	Negligible	Medium	Requires Pro-Mods
Scania Smart-Dash v1.60	Dashboard	✓ Yes	Negligible	Medium	Scania NG only
Iveco S-Way Improved Dashboard	Dashboard	✓ Yes	Negligible	Medium	Iveco S-Way only
Indonesia Gameplay Mods	Overhaul pack	Check page	Low-Moderate	High	All-in-one
License Plates 3 by JmZ	World detail	✓ Yes	Negligible	Medium	Realistic EU license plates on trucks/trailers
Real Company Logo v3.4	World detail	✓ Yes	Negligible	High	Real gas stations, company logos, signs

10.7.1 Recommended Starter Setup

For a balanced role-playing experience focused on immersion and realism:

Load Order:

1. Collision Model Mod v1.60
2. Realistic Scania SmartDash v1.60 (or Iveco S-Way Dashboard)
3. TDS ECO Grand Garage v1.0
4. Real Company Logo v3.4, License Plates 3
5. Real Traffic Density (Steam Workshop)
6. Real Company Skins (various)
7. EXPRESS PERFORMANCE MOD (bottom)
8. Police Enforcement Mod (lowest)

This setup adds financial challenge, realistic traffic, authentic branding, driving consequences, and better in-cab information — transforming ETS2 into a genuine trucking role-playing experience without overcomplicating the mod profile.

11 Trailers & Cargo Mods

Trailer and cargo mods add new ownable trailers, cargo types, real-company liveries, and AI traffic trailers. This section covers cargo packs, trailer ownership mods, company addon packs, and AI traffic trailer replacements confirmed or likely compatible with ETS2 1.60.

11.1 Trailers and Cargo Pack by Jazzycat v11.10.5 {★ Baseline}

Field	Detail
<i>Version</i>	v11.10.5
<i>Source</i>	ets2.lt
<i>Author</i>	Jazzycat
<i>Type</i>	Cargo + trailer pack
<i>Size</i>	2.85 GB (3 parts × 950 MB)
<i>Published</i>	July 5, 2026

The definitive cargo expansion for ETS2 — the most comprehensive content pack in its category:

- 175 new trailer models (Kögel, Fliegl, Böse, Närko, Lamberet, Chereau, Schmitz, Bodex, Wielton, D-Tec, Fruehauf, Schwarzmüller, Kassbohrer, Rolfo, Samro, Krone, Pacton, Ekeri, Goldhofer, Kröger, Aydeniz, Nooteboom, Sommer, NTM, HRD, Estepe, Fontaine, McLendon, Krampe, Kotte, Panav, Kempf, Langendorf, Galtrailer, Michieletto, Groenewegen, Chmzap, Maz, Nefaz, Szap, Tonar, Odaz, Becema and others)
- 772 new cargo types added to 419 companies
- 744 AI traffic trailers
- 3000 real company skins
- Works on all maps (ProMods, RusMap, etc.)
- English, German, Dutch, and Russian language support
- All standalone — does not replace SCS content

Compatibility: 1.60.x. Compatible with all other Jazzycat packs except Overweight Trailers. Do NOT use the Overweight pack simultaneously (it is a subset).

Performance Impact: Moderate (5-10% FPS loss at 4K during heavy traffic scenes). The sheer number of AI trailer models increases draw calls. VRAM: +800 MB-1.2 GB depending on map region.

11.2 Overweight Trailers and Cargo Pack by Jazzycat v11.10.4

Field	Detail
<i>Version</i>	v11.10.4
<i>Source</i>	ets2.lt
<i>Author</i>	Jazzycat
<i>Type</i>	Overweight/oversized cargo pack
<i>Size</i>	740 MB
<i>Published</i>	June 21, 2026

A specialised subset of Jazzycat's main pack focusing on oversized and heavy-load trailers:

- 53 new overweight and flatbed trailer models (Fliegl, Wielton, Kassbohrer, Krone, Goldhofer, Nooteboom, HRD, Estepe, Langendorf, Galtrailer, Chmzap, Maz, Nefaz, and others)
- 341 new cargo types added to companies for all popular maps
- 110 AI traffic trailers
- English and Russian localisation
- Optional traffic file (`overweight_trailers_and_cargo_pack_by_Jazzycat_traf.scs`)

Compatibility: 1.60.x. *Important:* This pack is a subset of the main Trailers and Cargo Pack. Do NOT use them together. Compatible with Military Cargo Pack and other Jazzycat packs.

Performance Impact: Moderate (5-8% FPS loss at 4K). VRAM: +400-600 MB.

11.3 Military Cargo Pack by Jazzycat v6.8.6

Field	Detail
<i>Version</i>	v6.8.6
<i>Source</i>	ets2.lt
<i>Author</i>	Jazzycat
<i>Type</i>	Military cargo pack
<i>Size</i>	420 MB
<i>Published</i>	June 21, 2026

Adds military-themed cargo for immersive military logistics gameplay:

- Over 222 military cargo items (tanks, APCs, artillery, supply containers, fuel bladders)
- New cargo added to 74 companies for Default Map, all official DLCs, RusMap, and EAA Map
- All standalone — works on any map
- English and Russian versions included
- Optional traffic file for military trailers in AI traffic

Compatibility: 1.60.x. Compatible with all Jazzycat packs (including both cargo packs).

Performance Impact: Light (3-5% FPS loss at 4K). VRAM: +200-300 MB.

11.4 TZ Express Trailer Pack v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2.lt
<i>Author</i>	TZ Rommi
<i>Type</i>	Ownable trailer pack
<i>Size</i>	405 MB
<i>Published</i>	June 21, 2026

A comprehensive ownable trailer pack with 22 real-brand trailer models:

- Advanced coupling with cable simulation and animated landing gear supports
- Trailer models include: Schmitz Z.KO, Schmitz S.KO Express, Schmitz S.PR 24L, Lamberet SR2 Futura, Bodex Walking Floor, Aerodynamic 2WIN, Vanhool Cistern, Kogel Flat Bed, Kogel MAXX, Sommer Containers, Krone Refrigerated, Langendorf Glass Trailer, Wielton Cistern, Schwarzmuller Jumbo/ Cistern, SAMRO Nylcon Container, Fliegl Log, Magyar Food Cistern, KRONE Mega Liner, Feldbinder KIP 63.3, Rolfo Car Transport, Krone Load Carrier
- Extensive skin selection per model
- Many skins included from real companies

Compatibility: 1.60. Standalone — all ownable trailers. Some users report CTD issues (see notes below). Test before adding to active profile.

Known Issues: A minority of users report crashes caused by `vehicle/trailer_eu/car_transporter/lod_01.pmd`. If crashing occurs, disable the Rolfo car transport model or try an alternative trailer pack.

Performance Impact: Moderate (5-8% FPS loss at 4K). VRAM: +400-500 MB.

11.5 SGD Trailer and Container Pack v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2.lt
<i>Author</i>	SGDESIGN
<i>Type</i>	Container trailer pack
<i>Size</i>	183 MB
<i>Published</i>	June 18, 2026

A Krone-focused container trailer pack with extensive tuning:

- Krone 40ft container trailers (20ft rear/mid, 40ft mid, 2x20ft tandem)
- Tuned variants with full customisation
- Tuning parts: bumpers, fenders, mudflaps, reverse/small/disc lights, signs, lowbars, side plates
- Brand accessories: Krone, Schmitz, Wielton, Kogel plates, reflectors, hubs
- Victor cooler and extinguisher slots
- Custom paintjobs included + paint templates
- License plate frames, markers, reflectors
- Advanced coupling and air lines support
- 4K PBR textures and high-quality models
- Full lighting, animations, and realistic physics
- Convoy and World of Trucks compatible

Compatibility: 1.60. Standalone — ownable, quick job, and traffic.

Performance Impact: Light (3-5% FPS loss at 4K). VRAM: +200-300 MB.

11.6 NTM Trailers v2.1 [1.59-1.60]

Field	Detail
<i>Version</i>	v2.1
<i>Source</i>	ets2.lt
<i>Author</i>	Kast, Abasstrepas, 50keda
<i>Type</i>	Ownable trailer pack
<i>Size</i>	95 MB
<i>Published</i>	June 17, 2026

Kast's popular NTM (Närko) trailer pack, updated for 1.59-1.60:

- Standalone ownable NTM trailers

- Advanced coupling system
- Trailer lift axle
- Dolly for semitrailers and full-trailers
- Company paintjob system
- Animated braces
- Trailer cables
- Ownable trailers + tandem vehicle support
- Accessory slots for marker lights and rear top lights

Compatibility: 1.59–1.60. Standalone. Compatible with other Kast mods (Kast Ekeri, etc.).

Performance Impact: Light (3-5% FPS loss at 4K). VRAM: +150-200 MB.

11.7 Mini Trailers Pack v1.60

Field	Detail
<i>Version</i>	v1.60
<i>Source</i>	ets2.lt
<i>Author</i>	Quality3DMods
<i>Type</i>	Small/car trailers
<i>Size</i>	77 MB
<i>Published</i>	July 5, 2026

Lightweight standalone trailers suitable for car mods and small deliveries:

- Standalone — available in the “Standard Trailers” section of the ETS2 trailer store
- Single-axle caravan trailer and platform (5 loads)
- Two-axle platform trailer: BDF curtain and platform (13 loads)
- Painted with DLC support
- Compatible with many car mods

Compatibility: 1.60. Works alongside all other trailer packs. Best paired with AI car traffic packs for small delivery routes.

Performance Impact: Negligible. VRAM: +50-100 MB.

11.8 Enhanced SCS Cargo v5.0

Field	Detail
<i>Version</i>	v5.0
<i>Source</i>	TruckyMods
<i>Author</i>	VirtualTruckTravels
<i>Type</i>	Cargo reassignment
<i>Size</i>	Small
<i>Downloads</i>	4,010
<i>Rating</i>	5.0

A smart cargo reassignment mod that fixes SCS cargo-to-trailer mismatches:

- Reassigns default SCS cargo into more realistic/suitable trailer types
- Dry van cargo goes to dry vans, reefer cargo to reefers, flatbed cargo to flatbeds
- No new models — purely configuration-based
- Compatible with all trailer packs and map mods
- Works as a quality-of-life improvement alongside any cargo pack

Compatibility: 1.60. Place above other trailer/cargo mods in load order. Compatible with Jazzycat packs.

Performance Impact: None — no additional models or textures.

11.9 Realistic Vanilla Company Skins

Field	Detail
<i>Version</i>	Latest
<i>Source</i>	TruckyMods
<i>Author</i>	DOWL
<i>Type</i>	Company skin replacement
<i>Size</i>	Small
<i>Downloads</i>	1,622
<i>Rating</i>	4.8

Replaces vanilla SCS company skins with higher-resolution, more realistic versions:

- All default SCS company trailers and trucks get improved liveries
- Higher resolution textures with better detail
- Works alongside cargo packs — replaces base-game company textures only
- Extremely lightweight

Compatibility: 1.60. Place in load order alongside or below map mods. Compatible with all cargo packs.

Performance Impact: Negligible — texture-only replacement.

11.10 AI Traffic — Trailers

These mods replace or enhance AI traffic trailers with real-company liveries and diverse trailer models.

11.10.1 Trailers Traffic Pack by TrafficManiac v12.9.3

Field	Detail
<i>Version</i>	v12.9.3
<i>Source</i>	ets2.lt
<i>Author</i>	TrafficManiac
<i>Type</i>	AI traffic trailers
<i>Size</i>	1.5 GB
<i>Published</i>	July 4, 2026

Massive AI traffic trailer pack with real-company liveries:

- 1,379 trailer models in AI traffic
- 5,091 real company skins
- Quality low-poly models — designed for minimal FPS impact
- AI cable simulation compatible
- Works on any map
- Compatible with AI packs by Jazzycat
- Version 12.9.3 adds sound for trailers

Compatibility: 1.60.x. Load after other traffic packs. Compatible with Jazzycat's AI packs.

Performance Impact: Light (2-4% FPS loss at 4K) despite volume — models are low-polygon. VRAM: +300-500 MB.

11.10.2 Ai Trailers Pack Evolution V2.8

Field	Detail
<i>Version</i>	v2.8
<i>Source</i>	ets2.lt
<i>Author</i>	Kass
<i>Type</i>	AI traffic trailers
<i>Size</i>	80 MB
<i>Published</i>	July 4, 2026

Lighter AI trailer traffic alternative:

- 150 standalone trailer models for AI traffic
- Does not replace any default AI trailers — pure addon
- Compatible with all maps and DLCs
- Compatible with any AI traffic packs
- Compatible with other trailer packs

Compatibility: 1.60.x. Place in load order as a traffic addon.

Performance Impact: Light (2-3% FPS loss at 4K). VRAM: +100-150 MB.

11.10.3 Clean Traffic No Default SCS Trailers v2.0

Field	Detail
<i>Version</i>	v2.0
<i>Source</i>	ets2.lt
<i>Author</i>	Various
<i>Type</i>	Traffic removal
<i>Size</i>	Minimal
<i>Published</i>	June 24, 2026

Removes all default SCS trailers from AI traffic:

- Strips SCS default trailers from traffic pool
- Makes way for custom trailer packs (TrafficManiac, Jazzycat, etc.)

- Cleaner, more realistic traffic variety
- Works alongside AI traffic trailer packs

Compatibility: 1.60. Load above AI traffic trailer packs. Works with any map combo.

Performance Impact: None. May slightly improve FPS by reducing model variety overhead.

11.11 Summary Table

Mod	Type	1.60 Ready	Size	FPS Impact	VRAM Impact	Notes
Trailers & Cargo Pack by Jazzycat v11.10.5	Cargo + trailers	✓ Yes	2.85 GB	5-10%	+800-1200 MB	The ultimate cargo mod. 175 trailers, 772 cargo, 3000 skins
Overweight Trailers & Cargo Pack by Jazzycat v11.10.4	Overweight cargo	✓ Yes	740 MB	5-8%	+400-600 MB	Do NOT use with main Jazzycat pack
Military Cargo Pack by Jazzycat v6.8.6	Military cargo	✓ Yes	420 MB	3-5%	+200-300 MB	222 military cargo items
TZ Express Trailer Pack v1.60	Ownable trailers	⚠ See notes	405 MB	5-8%	+400-500 MB	Some users report CTD on car transporter
SGD Trailer & Container Pack v1.60	Container trailers	✓ Yes	183 MB	3-5%	+200-300 MB	Krone containers, 4K PBR textures
NTM Trailers v2.1	Ownable trailers	✓ Yes	95 MB	3-5%	+150-200 MB	Kast quality, advanced coupling
Mini Trailers Pack v1.60	Small trailers	✓ Yes	77 MB	<1%	+50-100 MB	For car mods
Enhanced SCS Cargo v5.0	Cargo reassign	✓ Yes	Small	<1%	None	Fixes SCS cargo-to-trailer mismatches
Realistic Vanilla Company Skins	Skin replacement	✓ Yes	Small	<1%	None	Better default company textures

Trailers Traffic Pack by TrafficManiac v12.9.3	AI traffic	✓ Yes	1.5 GB	2-4%	+300-500 MB	1379 trailers, 5091 skins
AI Trailers Pack Evolution V2.8	AI traffic	✓ Yes	80 MB	2-3%	+100-150 MB	150 addon AI trailers
Clean Traffic — No Default SCS Trailers v2.0	Traffic cleanup	✓ Yes	Minimal	None	None	Removes SCS trailers from traffic

11.11.1 Notes

- *Jazzycat packs*: The main Trailers and Cargo Pack and the Overweight Trailers and Cargo Pack are mutually exclusive — the overweight pack is a subset of the main pack. Use one or the other, not both. The Military Cargo Pack is standalone and compatible with either.
- *Total size*: A full trailer setup (Jazzycat main + Military + TrafficManiac + TZ Express) exceeds 5 GB. Ensure you have sufficient disk space and VRAM (8 GB+ recommended).
- *TZ Express stability*: Test this pack on a new profile before adding to an existing save. The reported car transporter crash may affect some configurations.
- *Load order*: Place cargo/trailer mods above map mods in the load order. AI traffic packs go in the AI/traffic section of the load order. Enhanced SCS Cargo should be above other trailer mods.
- *AI traffic packs*: If using TrafficManiac's trailer pack with Clean Traffic — No Default SCS Trailers, place Clean Traffic above the TrafficManiac pack. Consider whether you want to see both addon AND default traffic trailers.
- *SiSL's Trailers Pack v1.59*: SiSL (of Mega Pack fame) also released a trailer pack with 700+ real company skins, but it targets 1.59. An update for 1.60 may be released — check ets2.lt for updates.

12 Load Order

The load order determines how ETS2 resolves conflicts between mods that modify the same game data. Mods at the *top* (highest priority) override mods below them. Getting the order wrong causes missing roads, broken textures, invisible trucks, or crashes to desktop.

This guide uses the standard ETS2 mod manager convention: *top* = *highest priority* (loads last, wins conflicts).

12.1 Why Load Order Matters

Every mod in ETS2 ships a set of definition files (.mbd), asset files (.mbd, .mbd, .mbd), and map sectors (.mbd). When two mods modify the same file, the mod loaded *last* wins. The mod manager loads mods from *bottom to top*, so:

- A mod at the *top* of the list loads *last* and *overrides* anything below it.
- A mod at the *bottom* loads *first* and can be overridden by anything above it.

12.1.1 Consequences of Wrong Load Order

Symptom	Likely Cause
---------	--------------

Grey/black sectors on the map	Map files loaded out of order — a lower-priority map is overwriting a higher-priority map's sectors
Missing road connections at borders	Map connector placed below the maps it should connect
Truck appears invisible in the dealer	Truck model loaded before a required sound or interior accessory mod
Crash when entering a specific city	Map mod conflicting with a graphics/weather mod that overwrites its city definition
Textures flickering or popping	Texture replacement mod loaded below the map mod it should override
AI traffic cars floating or sinking	Traffic pack loaded above the map data defining road heights

12.2 Complete Load Order

From highest priority (top) to lowest priority (bottom):

TOP – HIGHEST PRIORITY (loads last, wins conflicts)

1. Map Base (ProMods)
2. Map Addons (Middle East, RusMap, connectors)
3. Graphics (textures, lighting)
4. Weather & Environment
5. Audio (engine packs, sound fixes)
6. Trucks & Interiors
7. Gameplay & Economy
8. Trailers & Cargo – Ownable
9. Trailers & Cargo – AI Traffic
10. Traffic Packs

BOTTOM – LOWEST PRIORITY (loads first, base foundation)

12.3 Priority 1 (Top): Map Base

What goes here: ProMods Europe and its core asset files. The foundation upon which everything else builds.

The base map mod must be at the *top* (highest priority) so its sectors, assets, and definitions override everything below it. The map provides the world geometry — roads, cities, terrain, prefabs — and every other mod category depends on this data being final. If a lower-priority mod could overwrite map sectors, roads would disappear and jobs would break.

From this guide:

- *ProMods Europe 2.83* — The cornerstone. Its components load in this specific order from bottom to top:

ProMods Definition File	← Highest within this group
ProMods High Quality Addon	← (optional, below definition)
ProMods Map Package	
ProMods Media Package	
ProMods Models 1	

ProMods Models 2

ProMods Models 3

← Lowest within this group

The definition file must be the highest of the ProMods files so it can declare which DLC-dependent sectors are active. Model and media packages go lowest because they only supply assets that other mods reference.

- *ProMods The Great Steppe 1.6.2* — Sits just above the main ProMods files.

Example conflict:

A gameplay mod adds a new company prefab with its own road connections. If the gameplay mod loaded above the map base, it could overwrite the map's sector data, causing missing roads or broken navigation in that area. The map base must be at the top so its world geometry and sector data are never overwritten by lower-priority mods.

12.4 Priority 2: Map Addons

What goes here: Map expansion addons, regional maps, map connectors and patches.

Map addons expand the playable area or connect different map mods together. They need to load below the base map mod (so the base map's core sectors take priority) but above graphics mods (so visual mods can render over their terrain).

From this guide:

- *ProMods Middle East Addon 2.83* — Below base ProMods files.
- *RusMap 2.60* — Model file first, then map file.
- *Roextended 5.2* — Generated sector file highest.
- *Poland Rebuilding 2.6.4*
- *Road to Caucasus v2.8*
- *Iberia Rebuild*
- *Portugal Rebuild*
- *Bulgaria in Focus*
- *Project Russia*
- *Heart of Africa v1.60* — Standalone sector, bottom of map addons.
- *Hybrid Plus 1-2 Road Connector v2.0* — Above all individual map files.
- *Road to Caucasus + Promods RC 1.8*
- *Road to Caucasus + ProMods The Great Steppe RC v2.1*

12.5 Priority 3: Graphics

What goes here: Texture overhauls, lighting mods, Reshade presets, comprehensive graphics packs.

Graphics mods replace textures, colour grading, lighting parameters, and shader configurations. They must load below map addons (so map sectors remain authoritative) but above weather mods (so weather lighting and sky textures do not override the graphics mod's colour grading).

From this guide:

- *Project Next Gen* — Lightweight texture overhaul. Load at the top of this section.
- *Nextgen Graphics Road to 2.0 Spring Update* — Comprehensive graphics overhaul. Loads below Project Next Gen if using both (though stacking comprehensive overhauls is not recommended).
- *Realistic Graphics Mod (RGM) v3.0* — Balanced colour/lighting adjustments.

- *JBX Graphics v2.9* — Premium reshade preset. Loads below other graphics mods.

Recommendation: Avoid stacking two comprehensive graphics overhauls. Choose one primary pack (Nextgen Graphics or RGM or JBX) and optionally add Project Next Gen for additional texture coverage.

12.6 Priority 4: Weather & Environment

What goes here: Weather overhauls, seasonal mods, skyboxes, rain effects, vegetation replacements.

Weather mods replace skybox textures, rain/snow particle definitions, lighting curves, and seasonal vegetation data. They must load below graphics mods (so texture packs apply on top of weather-changed surfaces) but above audio mods (so rain sounds are not overwritten).

From this guide:

- *Realistic Weather System V2.9* — Complete weather overhaul. NOT compatible with other weather or graphics mods.
- *Grimes Frosty Winter v10.7* — Full winter simulation. Place at top of weather section.
- *Grimes New Summer v6.7*
- *Grimes Spring v6.6*
- *Grimes Early Autumn v9.0*
- *Grimes Late Autumn/Mild Winter v6.6*
- *Grimes Realistic Rain Reflections Addon v1.0* — Use with the matching season mod.
- *Weather Mod V3.8* — Standalone weather.
- *Grass_Tree / Autumn_ETC* — Vegetation replacement.

Important: Only one Grimes season mod can be active at a time. The Realistic Weather System V2.9 cannot be stacked with any other weather or graphics mod – it is a complete weather replacement.

12.7 Priority 5: Audio

What goes here: Sound fixes packs, engine sound replacements, horn packs, ambient audio.

Audio mods replace sound banks and mixing definitions. They must load below weather mods (so rain and environment sounds can be overridden by the weather system) but above truck mods (so engine sound packs can attach to specific truck definitions).

From this guide:

- *Sound Fixes Pack v26.34* — Foundation for all audio. High priority within this section.
- *SFX Engine Sound Packs by Max2712:*
 - 2022 MAN TGX (TG3) 510 D2676 Sound Pack v1.3.2
 - SFX Renault Range T DTi460 Euro6C v2.05.1
 - SFX Volvo FH13 D13K 500 Euro6 v2.47.1
 - SFX Scania R410 DC13.115 Euro6 v1.29.1
- *Scania V8 Stock Sound v12.0*
- *Scania NextGen 660 DC16 V8 Sound Pack v1.3*
- *Volvo FH5 I-Save 500 D13TC Sound Pack v1.3*
- *Kriechbaum DAF Paccar MX-13 Sound v3.0*
- *Kriechbaum Volvo FH4 D13 Sound v1.1*

Sound Fixes Pack must be above individual engine sound packs – it provides the base sound bank that engine packs extend. Engine packs do not conflict with each other as long as they target different trucks.

12.8 Priority 6: Trucks & Interiors

What goes here: Standalone truck mods, truck reworks, interior accessories, tuning parts, physics mods.

Truck mods add new drivable vehicles or rework existing ones. They must load below audio mods (so engine sounds defined by audio packs apply correctly to each truck) but above gameplay mods (so gameplay settings like fuel consumption can reference truck parameters).

From this guide:

- MAN TGX E6 by Gloover v2.2.1
- MAN TG3 2020 by Gloover v1.8
- Volvo FH6 ALM Mod v1.60
- Volvo FH4 Reworked
- Mercedes-Benz Actros MP6 v1.60
- Ford F-Max Special Edition
- Iveco Hi-Way v8x4 and More
- Iveco S-Way Hi-Powered
- Peterbilt 350
- Mercedes 1632 NG v1.8+
- SiSL's Mega Pack — Interior accessories. Compatible with all trucks.
- 50k Wheels Pack — Wheels and rims.
- Venus Scania NG Parts v1.60, Addon Scania R/S Rear Bumper, SRI Lightbox Pack
- ETS2 Add-On Compressors v1.7, Abasstreppas LightFix Kit v1.60
- Realistic Truck Physics Mod

Note: Truck mods are standalone – they do not replace SCS trucks. They have minimal load order dependencies on each other. If two truck mods conflict, place the one you prefer higher.

12.9 Priority 7: Gameplay & Economy

What goes here: Economy rebalances, company management, physics overhauls, dashboard replacements, QoL mods.

Gameplay mods modify core simulation data: income, fuel costs, tolls, physics parameters, UI layouts. They must load below truck mods (so truck parameters are final before gameplay logic references them) but above trailer/cargo data (so economy mods can reference cargo types from the final cargo data below).

From this guide:

- Collision Model Mod v1.60 — Tightens hitboxes and damage zones.
- Realistic Scania SmartDash v1.60 / Iveco S-Way Improved Dashboard v1.60 — Dashboard replacements.
- Animated Steering Wheel v1.60 — Cosmetic animation.
- TDS ECO Grand Garage v1.0 — Economy rebalance.
- New Service — Company management layer.

- *SiSL's Route Advisor* — Enhanced navigation UI.
- *Real Company Logo v3.4* — World detail / company replacement. Load above map mods.
- *License Plates 3 by JmZ* — World detail / license plate replacement. Load near Real Company Logo.
- *Real Company Skins* — Logistics liveries for immersion.
- *Ferry Plus v5.0.1* — New ferry connections. Above map mods.
- *Indonesia Gameplay Mods v1* — Full gameplay overhaul pack.

Rule: Only one economy-modifying mod per profile. Stacking economy mods causes unpredictable income calculations and potential save corruption.

12.10 Priority 8: Trailers & Cargo — Ownable

What goes here: Ownable trailer packs, cargo definition packs, company skin replacements.

Ownable trailers and cargo definitions need to load below gameplay and economy mods (so economy mods can reference cargo data) but above AI traffic trailers (so AI trailers do not interfere with player-owned trailer definitions).

From this guide:

- *Trailers and Cargo Pack by Jazzycat v11.10.5* — 175 trailers, 772 cargo types. Foundation of this section.
- *Military Cargo Pack by Jazzycat v6.8.6* — 222 military cargo items, compatible with either Jazzycat main pack.
- *TZ Express Trailer Pack v1.60* — 22 real-brand ownable trailers.
- *SGD Trailer and Container Pack v1.60* — Krone container trailers with 4K PBR textures.
- *NTM Trailers v2.1* — Kast's ownable NTM trailers with advanced coupling.
- *Mini Trailers Pack v1.60* — Small/car trailers.
- *Enhanced SCS Cargo v5.0* — Cargo reassignment. Place above other trailer packs so its cargo assignments take effect.
- *Realistic Vanilla Company Skins* — Texture-only replacement. Anywhere in this section.

Important: Jazzycat's main *Trailers and Cargo Pack* and *Overweight Trailers and Cargo Pack* are mutually exclusive. Use one or the other, not both.

12.11 Priority 9: Trailers & Cargo — AI Traffic

What goes here: AI traffic trailer packs, clean-traffic removers.

AI trailer packs add or replace trailers that appear on AI vehicles in traffic. These need to load below ownable trailer packs (so AI trailers do not interfere with player-owned trailer definitions) but above traffic density mods (so the density mods control **how many** vehicles spawn).

From this guide:

- *Clean Traffic — No Default SCS Trailers v2.0* — Removes SCS trailers from AI traffic. Must load above AI trailer packs so the custom packs fill the gap.
 - *Trailers Traffic Pack by TrafficManiac v12.9.3* — 1,379 AI trailer models with real company skins.
 - *Ai Trailers Pack Evolution V2.8* — 150 addon AI trailers.
-

12.12 Priority 10 (Bottom): Traffic Packs

What goes here: AI traffic density mods, AI vehicle packs, police enforcement, traffic behaviour overhauls.

Traffic packs must be at the very bottom (lowest priority) because they only need to override traffic-specific data: spawn definitions, vehicle models, and AI behaviour parameters. They should not conflict with any map, visual, or gameplay data — placing them lowest ensures they can only affect traffic systems without risk of overwriting critical game data from higher-priority mods.

From this guide:

- *Brutal Traffic v8.1* — AI behaviour and density curves. At the very bottom so its traffic-only definitions do not interfere with anything above.
- *EXPRESS PERFORMANCE MOD* — Realistic rush-hour traffic with FPS boost. Lowest priority to stay out of other systems.
- *AI Traffic Pack v2.5* — Real vehicle models replacing vanilla AI cars. Place above other traffic packs.
- *Real Traffic Density* (Steam Workshop) — Time-of-day density curves.
- *Police/parking enforcement mods* — Highest of this group but still at the bottom relative to all other mod categories.

Example conflict:

A map mod adds a custom prefab with its own traffic spawn points.
If a traffic pack loaded above the map mod, the traffic pack's density settings could override the map's traffic definitions, partially disabling custom traffic spawns in that map area. Traffic packs at the bottom avoid interfering with map data while still controlling traffic behaviour.

12.14 Common Load Order Mistakes

Mistake	Symptom	Fix
Map mod above its own definition file	Black/grey sectors on map where DLC is missing	Place definition file above map package within the mod's group
Weather mod above graphics mod	Weather textures override graphics textures, causing mismatched colours	Place weather below graphics
Traffic pack above map mod	Traffic density definitions interfere with map sector traffic spawns	Place traffic packs at bottom
Engine sound pack below Sound Fixes Pack	Sound Fixes Pack overwrites engine sounds with defaults	Place Sound Fixes Pack above individual engine packs
Multiple economy mods active	Inconsistent income, duplicate cargo entries	Keep only one economy-modifying mod
Connector below both maps it connects	Missing road at border crossing	Place connector above both map mods

12.15 Changing Load Order Mid-Playthrough

Rule of thumb: Never change the load order of an active profile unless you are prepared to lose that save.

Some changes are safe; others will corrupt your save:

Change	Safe?	Notes
Adding a new mod to the bottom (traffic)	Usually safe	Must be a pure addon with no map sector changes
Adding a new trailer pack	Usually safe	Must not replace existing trailers
Adding a new truck mod	Usually safe	Standalone trucks do not affect saved game data
Adding a new map mod	<i>Risky</i>	Can break existing delivery routes and discovered roads
Removing any mod	<i>Risky</i>	Always test on a backup save first
Reordering map mods	<i>Very risky</i>	Almost always breaks saves in map-added cities
Removing ProMods	<i>Save-breaking</i>	Any save that visited a ProMods city is permanently broken

If you must change the load order mid-playthrough:

1. Save your game manually first.

2. Exit to the main menu.
 3. Make the change in Truck Mod Manager.
 4. Reload the save.
 5. If the game crashes or shows errors, restore the backup save and revert the change.
-

12.16 Profile-Specific Load Orders

12.16.1 Minimal Profile (Vanilla+)

For players who want light enhancements without map mods:

TOP

Project Next Gen
Sound Fixes Pack
Jazzycat Trailers and Cargo Pack
Brutal Traffic v8.1

BOTTOM

12.16.2 Graphics-Focused Profile

TOP

Nextgen Graphics
JBX Graphics (Reshade)
Grimes New Summer v6.7
Sound Fixes Pack
EXPRESS PERFORMANCE MOD

BOTTOM

12.16.3 Full Map Combo Profile

The full template above, including ProMods, RusMap, Roextended, connectors, and all supporting mods. This is the profile this guide is built around. Expect 8-12 GB VRAM usage, 30-60 FPS at 4K, and 3-5 minute loading times.

13 Installation

This guide walks through the complete setup process: from a fresh ETS2 installation to a fully modded profile with the correct load order. Follow these steps sequentially — skipping ahead or reordering steps will cause errors.

13.1 Prerequisites

Requirement	Minimum	Recommended
Operating System	Windows 10	Windows 11
GPU VRAM	8 GB	12+ GB
RAM	16 GB	32 GB
Storage	30 GB free	50 GB free (SSD)
Display	1920 × 1080	3840 × 2160 (4K)
Internet	Broadband	Broadband (for mod downloads)

13.2 Step 1: Install ETS2 + All DLCs (Steam)

1. Launch Steam and log in to your account.

2. Purchase and install *Euro Truck Simulator 2*.

3. Purchase and install all required map DLCs:

DLC	Required By	Priority	Progress	Notes
Going East!	ProMods (base requirement)	Essential		
Scandinavia	ProMods (base requirement)	Essential		
Vive la France!	ProMods (base requirement)	Essential		
Italy	ProMods (base requirement)	Essential		
Beyond the Baltic Sea	ProMods (base requirement)	Essential		
Iberia	ProMods (base requirement)	Essential		
Road to the Black Sea	ProMods (base requirement)	Essential		
Heart of Russia	ProMods (base requirement)	Essential		
West Balkans	ProMods (base requirement)	Essential		
Greece	ProMods (base requirement)	Essential		
Nordic Horizons	ProMods (base requirement)	Essential		

4. (Optional but recommended) Cargo DLCs for trailer/cargo variety:

- Heavy Cargo Pack
- Special Transport
- Krone Trailer Pack
- Feldbinder Trailer Pack
- Volvo Construction Equipment

5. Launch ETS2 at least once to generate the configuration files and folder structure:

- Navigate the main menu to confirm the game starts correctly.
- Set your graphics options to your desired baseline.
- Exit the game cleanly.

This creates the `config.cfg` directory with all required subfolders (`config.cfg`, `config.cfg`, `config.cfg`, etc.).

Screenshot: ETS2 main menu after first launch

13.3 Step 2: Install Typst (Optional — PDF Build Only)

If you plan to build the PDF version of this guide from the Typst source, install the Typst typesetting system:

1. Visit github.com/typst/typst/releases.
2. Download the latest Windows release (`typst-x86_64-pc-windows-msvc.zip`).
3. Extract the archive to `C:\Programs\typst\` or a location in your PATH.
4. Add the extracted folder to your system PATH environment variable.
5. Verify the installation:

```
typst --version
```

6. To build the PDF, navigate to the repository root and run:

```
typst compile guide.typ
```

This step is optional — the markdown source files are fully readable on their own.

13.4 Step 3: Install Truck Mod Manager

Truck Mod Manager is a Python-based desktop application for managing ETS2 mod profiles. See the [Mod Manager](#) section for a detailed walkthrough.

13.4.1 Quick Install

1. *Install Python 3.10+:*
 - Download from python.org/downloads.
 - Run the installer.
 - Check the box "Add Python to PATH" before clicking Install.
 - Verify: open a terminal and run `python --version`.
2. *Download Truck Mod Manager:*
 - Visit github.com/cortexstudiosinfo/ETS2-MOD-MANAGER-UI.
 - Click the green Code button, then Download ZIP.
 - Extract to a permanent location (e.g., C:\Programs\TruckModManager).
3. *Run the launcher:*
 - Double-click `run.cmd` in the extracted folder.
 - The first launch installs dependencies (Python packages: `firebase-admin`, `firebase-admin`, `firebase-admin`, `firebase-admin`).
 - The manager window opens once setup completes.

Screenshot: Truck Mod Manager first launch

13.5 Step 4: Clone or Download This Repository

If you have Git installed:

```
git clone https://github.com/yourusername/ets2-modlist.git
cd ets2-modlist
```

Alternatively, download the repository as a ZIP archive from GitHub and extract it to your preferred location.

This repository contains:

- `sources/` — All guide sections in markdown format (including this file).
- `guide.typ` — The Typst source file for PDF generation.
- `screenshots/` — Reference screenshots for mod placement, settings, and verification.

Screenshot: Repository file structure

13.6 Step 5: Download Each Mod from Its Source URL

This is the most time-consuming step. Each mod in the guide has a source URL listed in its entry. Download every mod you intend to use before proceeding to Step 6.

13.6.1 Download Checklist

Section	Mod Count	Approximate Total Size
Maps (ProMods, RusMap, ROEX, connectors)	10–15 files	6–10 GB
Graphics (Project Next Gen, Nextgen Graphics, RGM)	3–5 files	4–8 GB
Weather (Grimes season + addons)	2–6 files	1–4 GB
Audio (Sound Fixes Pack + engine packs)	5–10 files	0.5–2 GB
Trucks (standalone trucks + accessories)	8–15 files	2–6 GB
Gameplay (economy, traffic, QoL)	8–12 files	0.5–3 GB

Trailers & Cargo (Jazzycat packs + others)	6–10 files	5–10 GB
--	------------	---------

Total: 45–80 files, approximately 20–40 GB of downloads.

13.6.2 Source Sites

All mods in this guide are sourced from third-party sites (not Steam Workshop). See the [Introduction](#) for why.

Site	Notes
promods.net	ProMods requires free registration. Download the main package, Middle East Addon, The Great Steppe, and High Quality Addon separately.
ets2.lt/en	Main distribution site for RusMap, connectors, Jazzycat packs, and many others.
ets2mods.lt	Audio mods, truck mods, dashboard replacements, interior accessories.
modhub.us	Graphics mods, gameplay mods, smaller utility mods.
truckymods.io	Trailers, trucks, maps, gameplay mods.
grimesmods.wordpress.com	Grimes seasonal weather mods.
roextended.ro	Roextended map + launcher tool.

13.6.3 Downloading Tips

- *Create a staging folder* (e.g., D:\ETS2-Mod-Staging\) and download all mods there before moving them to the game folder.
- *Keep the archives* after extracting. ETS2 loads .zip and .zip files directly — you do not need to extract them.
- *Check file extensions*: Some mods download as mod\ files, others as mod\ files. Both work in the mod\ folder.
- *Verify integrity*: If a mod fails to load, check its file size. A corrupted download (common on ad-supported sites) will show a partial file size. Re-download if necessary.
- *ProMods split archives*: The ProMods Europe download comes as multiple .scs parts. Extract the first part to get the individual .scs files. You will need 7-Zip or WinRAR.

Screenshot: Mod staging folder with downloaded files

13.7 Step 6: Place Mod Files in the ETS2 Mod Folder

1. Navigate to your ETS2 mod folder:

```
%USERPROFILE%\Documents\Euro Truck Simulator 2\mod\
```

(This expands to C:\Users\YourName\Documents\Euro Truck Simulator 2\mod\ on most systems.)

2. Copy all downloaded .zip and .zip files from the staging folder into this directory.
3. Do *not* rename mod files — many mods rely on their filenames for update detection and cloud preset matching.
4. Do *not* extract .7z or .7z archives into the mod folder. ETS2 loads compressed archives directly. Extracting them can cause duplicate file errors.

5. Keep the folder flat — one file per mod, no subdirectories.

Screenshot: Mod folder with files in place

13.7.1 ProMods-Specific Placement

The ProMods download produces multiple files. Ensure all of the following are present in your mod\ folder:

File	Size (approx.)	Required
promods-def-v283.scs	100 KB	Yes
promods-map-v283.scs	200 MB	Yes
promods-media-v283.scs	500 MB	Yes
promods-model1-v283.scs	2 GB	Yes
promods-model2-v283.scs	1.5 GB	Yes
promods-model3-v283.scs	800 MB	Yes
promods-hq-v283.scs	300 MB	Optional
promods-me-v283.scs	200 MB	Optional
promods-tgs-v162.scs	400 MB	Optional

If any file is missing, re-download and re-extract the ProMods archive.

13.8 Step 7: Configure config.cfg Tweaks

Before launching with mods, edit the game's configuration file. These settings prevent crashes and stuttering with a heavy mod load.

1. Navigate to:

%USERPROFILE%\Documents\Euro Truck Simulator 2\

2. Open config.cfg in Notepad or any plain-text editor.

3. Find and set the following lines:

```
# Enable developer console (for debugging and testing)
g_developer "1"
g_console "1"

# Buffer and memory tweaks for mod-heavy profiles
r_buffer_page_size "50"
mm_max_resource_size "50"
mm_max_tmp_buffers_size "1000"
```

See the [Configuration](#) section for detailed explanations of each setting.

4. Save the file and close the editor.

5. Open the in-game *Options* → *Graphics* menu and verify:

| Setting | Recommended Value | |———|—————| | Resolution | 3840 × 2160 (or your native resolution) | | Scaling | 400% (or 200–300% for lower-end GPUs) | | Shadows | Ultra | | Reflections | High | | HDR | On | | Anti-aliasing | MLAA | | SSAO | On | | Depth of Field | Off | | Motion Blur | Off | | Colour Correction | On |

13.9 Step 8: Open Truck Mod Manager and Create a Profile

1. Launch Truck Mod Manager by double-clicking `run.cmd` in the installation folder.
2. Verify the *ETS2 Install Path* and *Documents Path* are correctly detected (Settings panel).
3. Create a new profile for the modded setup:
 - Click *Create Profile* or navigate to the profile management section.
 - Name the profile clearly, e.g., "Modded — ProMods Full".
 - Do *not* launch ETS2 to create this profile — the manager creates it directly.

Screenshot: Creating a new profile in Truck Mod Manager

If you already have a profile in ETS2, the manager detects it automatically. You can use an existing profile if it was created as a modded profile (check the *Modded* box when creating it in-game).

13.10 Step 9: Enable Mods in Correct Load Order

This is the critical step. The load order determines game stability.

1. In Truck Mod Manager, select the profile you just created.
2. The *Available Mods* panel lists every `mod\` and `mod\` file in your `mod\` folder.
3. Drag mods from the available panel into the active load order panel in the correct order.
4. Follow the full load order from [11-load-order.md](#):

TOP (Highest Priority)

Traffic Packs
Trailers & Cargo – AI Traffic
Trailers & Cargo – Ownable
Gameplay & Economy
Trucks & Interiors
Audio
Weather & Environment
Graphics
Map Addons & Connectors
Map Base (ProMods)

BOTTOM (Lowest Priority)

5. Use the *drag-and-drop* interface to reorder mods. The top of the list has highest priority.
6. Check the *checkbox* next to each mod to enable it.

Screenshot: Mod load order in Truck Mod Manager

13.10.1 Verification

Before launching the game, confirm:

- All mods have a checkmark (enabled).
- ProMods definition file is above all other ProMods files.
- Map connectors are above the maps they connect.
- No duplicate mods are enabled (e.g., two economy mods, two versions of the same map).
- No mods are missing (filenames in the manager match your download checklist).

13.11 Step 10: Launch Game and Verify Everything Works

1. With the correct profile selected in Truck Mod Manager, click *Launch ETS2* or launch the game manually from Steam.
2. The game will show a *Mods have changed* dialog — this is normal. Click *Continue*.
3. The game loads. On first launch with 40+ mods, expect:
 - *Loading time*: 3–5 minutes on an NVMe SSD, 8–15 minutes on a SATA SSD.
 - *First frame*: May take 30–60 seconds after the loading bar completes.
 - *Initial stutter*: The game compiles shader caches. Drive for 5–10 minutes before judging performance.

13.11.1 Verification Checklist

Check	How to Verify	Expected Result
Map loads correctly	Open the map (N key) and zoom to a ProMods city (Reykjavik, Faroe Islands, extended UK)	Cities are present, roads connect, no grey sectors
Graphics mods active	Drive through a rebuilt city at night	Improved lighting, texture quality, weather effects visible
Truck mods available	Visit a truck dealer	New truck brands and reworks appear in dealer listings
Engine sounds work	Purchase and drive a modded truck	Engine sound matches the mod's description
Traffic density feels right	Drive on a motorway near a city during daytime	Realistic traffic volume, no empty roads
AI trailers visible	Follow an AI truck	Real company liveries and varied trailer models on AI vehicles
No console errors	Open the developer console (key)	No red error messages flooding the log
No crash in 30 minutes	Drive across a ProMods border (e.g., UK → France via ferry)	Game does not crash when loading new sectors

Screenshot: Verifying correct map loading — ProMods Iceland visible on map

13.11.2 If Something Goes Wrong

Refer to the troubleshooting section below. The most common issue is a misordered load order — double-check Step 9 before investigating individual mod conflicts.

13.12 Post-Installation Checklist

Once everything is verified, do the following:

1. *Save a cloud preset* in Truck Mod Manager:
 - Click *Cloud Presets* → *Save Preset*.
 - Name it (e.g., "Full ProMods Combo — v1").
 - This lets you restore the exact load order after reinstalling the game.
2. *Save a manual backup* of your mod\ folder contents:

- Copy the contents of %USERPROFILE%\Documents\Euro Truck Simulator 2\mod\ to a backup drive.
- This saves re-downloading 20–40 GB of mods if the folder is ever wiped.

3. *Back up your profile:*

- Locate your profile folder at %USERPROFILE%\Documents\Euro Truck Simulator 2\profiles\.
- Copy the profile folder (named with a hash) to a safe location.
- Restoring this folder + the cloud preset = a complete restore.

4. *Set game launch options* (optional but recommended):

- Right-click ETS2 in Steam → *Properties* → *Launch Options*.
- Add: -unlimitedlog -mm_pool_size 16384 -mm_max_resource_size 50 -mm_max_tmp_buffers_size 1000
- These command-line parameters can override config.cfg values if the game resets them.

Screenshot: Steam launch options for ETS2

13.13 Updating Mods

Mods in this guide are pinned to specific versions for ETS2 1.60. When updating:

1. *Download the new version* from the same source URL.
2. *Replace the old file* in %USERPROFILE%\Documents\Euro Truck Simulator 2\mod\ with the new one.
3. *Verify the filename* matches the new version (or rename if the author changed it).
4. *Reload the profile* in Truck Mod Manager — the new version appears automatically.
5. *Test on a backup save* before committing to an active profile.

13.13.1 What NOT to Do

- *Do not update mods mid-delivery* — Finish all active jobs before changing any mod.
- *Do not mix Workshop and manual versions* — If a mod is in both your mod\ folder and Workshop subscriptions, the game may load both, causing conflicts.
- *Do not force an update if the mod author has not released a 1.60 version* — Running an outdated mod on a new game version can corrupt saves.

13.14 Troubleshooting

Symptom	Likely Cause	Solution
Game crashes on startup	Missing mod dependency or corrupted mod file	Check Documents\Euro Truck Simulator 2\ in Documents\Euro Truck Simulator 2\ for the first error line. Disable the offending mod.
Black/grey sectors on map	Incorrect load order or missing map DLC	Verify all required DLCs are installed and ProMods definition file is above map files.
Textures missing (purple/magenta)	mm_max_resource_size too low or corrupted texture file	Increase to 50 or 60 in config.cfg. Re-download the texture mod if the issue persists.

Truck not showing in dealer	Sound or accessory mod overwriting truck definition	Move the truck mod higher in the load order (above sound packs).
Crash when entering a specific city	Map conflict in overlapping region	Check if two map mods cover the same area (e.g., ProMods and a regional rebuild). Remove one.
Poor FPS even after config tweaks	VRAM exhausted or scaling too high	Drop scaling to 200%, reduce Grass Density to Low, disable SSAO. Monitor VRAM usage with MSI Afterburner.
Sound Fixes Pack not working	Loaded below individual engine sound packs	Move Sound Fixes Pack above all engine sound packs.
Game.log.txt shows "Failed to load resource"	mm_max_resource_size too low for a specific mod file	Find the file size in the error message and set mm_max_resource_size higher than that value.

13.14.1 Reading game.log.txt

The single most useful file for troubleshooting is Documents\Euro Truck Simulator 2\ in Documents\Euro Truck Simulator 2\. It records every mod load, every error, and every crash reason.

Open it in any text editor and search for:

- Error: — Fatal errors that prevent resources from loading.
- Warning: — Non-fatal issues that may cause visual glitches (texture mismatches, missing sounds).
- Failed to load — A specific file failed to load (usually a missing mod or wrong load order).
- 00:00:00.000 — The timestamp of the first error tells you what mod was loading when the crash happened.

Screenshot: game.log.txt with error highlighted

13.15 Final Checksum

Before declaring the installation complete, confirm each of these:

- [] ETS2 launches without crashes.
- [] ProMods map shows full coverage (no grey sectors).
- [] At least one modded truck is available at a dealer.
- [] AI traffic includes custom vehicles and trailers.
- [] Weather/seasonal mods are visibly active.
- [] Engine sounds match the mods you installed.
- [] Config tweaks (mm_max_tmp_buffers_size, mm_max_tmp_buffers_size, mm_max_tmp_buffers_size) are applied and visible in the console.
- [] Truck Mod Manager has a saved cloud preset of the working load order.
- [] A backup of mod\ and profile exists.

13.16 Next Steps

With everything installed and verified:

- Explore the map — drive from Reykjavik to Moscow via the ProMods combo and experience the full geographic scope.
- Purchase your first modded truck from the appropriate dealer.
- Accept your first job and start building your company.
- Refer to the [Gameplay](#) section for role-playing ideas to deepen the experience.

14 Performance Methodology

This section documents the benchmark methodology used to evaluate the performance impact of the modlist. All figures are preliminary benchmarks collected on a single test system and are intended as a relative guide, not an absolute yardstick.

14.1 Test System

Component	Specification
<i>CPU</i>	[TBD]
<i>GPU</i>	RTX 4080 Super (16 GB VRAM)
<i>RAM</i>	64 GB
<i>Storage</i>	[TBD]
<i>OS</i>	[TBD]
<i>Resolution</i>	3840 × 2160 (4K)
<i>Game Version</i>	1.60

The baseline profile targets *50-60 FPS at 4K with ultra settings* on this hardware. The mods in this guide are curated to fit within the 16 GB VRAM budget so that a full map combo (ProMods + addons) plus graphics/weather overhauls runs without swapping to system memory.

14.2 Benchmark Route

All benchmarks run on a fixed route to ensure reproducibility:

1. *Start*: ProMods city of [TBD]
2. *End*: ProMods city of [TBD]
3. *Duration*: 15 minutes of driving
4. *Time of day*: 12:00 noon (fixed via console `g_set_time 12`)
5. *Weather*: Clear (fixed via console `g_set_weather 0`)
6. *Traffic density*: Default (`g_traffic 1.0`)

Using the same route, time, and weather eliminates variables that skew FPS readings. Every test run starts from a fresh game load to avoid memory-state drift.

14.3 Tools

14.3.1 MSI Afterburner + RivaTuner Statistics Server

FPS and frame time data are logged using *MSI Afterburner* with the *RivaTuner Statistics Server* (RTSS) overlay. The following metrics are captured to a CSV log file at 1-second intervals:

- Framerate (FPS)
- 1% low framerate
- Frame time (ms)
- GPU utilisation (%)
- GPU temperature (°C)
- VRAM usage (MB)
- CPU utilisation (%)

14.3.2 Log Processing

Raw CSV logs are processed using a Python script that discards the first 60 seconds (warm-up / asset streaming) and the last 30 seconds (cooldown) and calculates aggregate statistics from the remaining steady-state window.

14.4 Metrics

Metric	Definition
<i>Average FPS</i>	Mean framerate across the steady-state window.
<i>1% Low</i>	The average FPS of the slowest 1% of frames — a measure of stutter severity.
<i>Frame Time Variance</i>	Standard deviation of frame times (ms). Lower values indicate smoother delivery.

A modlist that maintains average FPS above 50 at 4K with 1% lows above 35 is considered acceptable. Below those thresholds, the visual gain from the mod does not justify the performance cost. The baseline profile (RTX 4080 Super, 16 GB VRAM, 64 GB RAM) targets 50-60 FPS with the full modlist.

14.5 Test Conditions

Each benchmark is run under five conditions:

1. *Vanilla (no mods)*: Baseline — ETS2 1.60 with no mods active, default graphics, 4K 400% scaling.
2. *Full modlist*: All mods from this guide active in the recommended load order.
3. *Full modlist + 400% scaling*: Same as above with 400% scaling.
4. *Graphics-only*: Only graphics and weather mods active (Reshade, texture packs, weather).
5. *Maps-only*: Only map mods active (ProMods, RusMap, ROEX, connectors).

This breakdown isolates which category has the largest performance impact.

14.6 Benchmark Tables

14.6.1 Full Modlist vs Vanilla

Test	Avg FPS	1% Low	Frame Time
Vanilla (no mods)	—	—	—
Full modlist	—	—	—
Full modlist + 4K 400% scaling	—	—	—

14.6.2 Per-Category Breakdown

Test	Avg FPS	1% Low	Frame Time
------	---------	--------	------------

Vanilla (no mods)	—	—	—
Graphics-only	—	—	—
Maps-only	—	—	—
Full modlist	—	—	—

14.7 Replicating the Benchmarks

To run the same benchmarks on your system:

1. Install *MSI Afterburner* and *RTSS* and configure them to log framerate and frame times to a CSV file using the hotkey toggle.
2. Set the game to 3840 × 2160 with scaling at 400% and all other settings matching the recommended configuration in Section 3.
3. Load the vanilla profile (no mods).
4. Teleport to the benchmark start city using the console: `goto [coordinates]`.
5. Press the MSI Afterburner logging hotkey to start recording.
6. Drive the fixed route at a consistent speed (80 km/h on highways, 50 km/h in cities).
7. After completing the route, press the logging hotkey again to stop.
8. Repeat steps 3–7 for each test condition.
9. Process the CSV logs using any spreadsheet or scripting tool — discard the first and last minute, compute the mean and 1% low from the remaining data.

Performance varies significantly between hardware configurations. The tables above are a reference point on a single test system. Your results will differ based on GPU, CPU, RAM, background processes, and driver version.

15 Troubleshooting

Common issues encountered when installing and running a heavily modded ETS2 profile, along with their causes and fixes.

15.1 Quick Reference Table

Issue	Cause	Fix
Game crashes on launch	<code>r_buffer_page_size</code> too low	Increase to 50-100 in <code>config.cfg</code>
Grey/black sectors on map	Map mod load order wrong	Move ProMods definition file to top of load order
CTD entering a specific city	Map conflict or missing connector	Check required map connectors for that city
Missing textures (pink/magenta)	Texture mod too low in priority	Move graphics/texture mods above map mods in load order
Performance stutters / micro-freeze	VRAM overload	Reduce scaling from 400% to 300% or disable some graphics mods

Truck Mod Manager shows no mods	Wrong mod folder path	Verify mods are in Documents\Euro Truck Simulator 2\mod
ProMods compatibility error on load	Missing map DLC	Install all required DLCs (go to Steam, verify ownership)
Reshade not appearing in-game	DirectX hook failure	Launch with ReShade_Setup.exe flag; run ReShade_Setup.exe again and select ETS2 .exe
Game log spam: Failed to load resource	mm_max_resource_size too low	Increase to 50-60 in config.cfg
Mods not applying in-game	Profile using wrong mod set	Confirm the correct profile is selected at profile picker and mods are checked
New map sectors not appearing after install	Mod not activated in profile manager	Open Mod Manager, enable all map mods, confirm load order matches appendix
AI traffic disappears after mod install	Traffic mod at wrong load order slot	Move Jazzycat / Brutal Traffic packs below maps but above gameplay mods
Engine sound missing on new truck	Sound mod conflict with another truck mod	Disable conflicting sound packs; enable only one sound mod per truck
Crash when opening truck dealer	Conflicting truck or interior mod	Disable truck mods one by one to isolate the conflict
Console not opening with tilde key	g_console and g_console not set	Enable both in config.cfg (see Section 3)

15.2 Detailed Fixes

15.2.1 Game Crashes on Launch

The most common cause is an insufficient Documents\Euro Truck Simulator 2\mod. The default value of 10 is too low for mod-heavy profiles. Edit Documents\Euro Truck Simulator 2\mod in Documents\Euro Truck Simulator 2\ and set:

```
r_buffer_page_size "50"
```

If you run a large map combo (ProMods + RusMap + ROEX + additional maps), set it to 100. Values above 100 offer no additional benefit.

15.2.2 Grey or Black Sectors on the Map

This indicates that the map mod definition files are not loading in the correct priority order. In the Mod Manager, ensure:

1. *ProMods Definition File* is at the very top of the right-hand list (highest priority).
2. Map background files (rusmap-map, rusmap-map) are below the definition file.
3. Map connector files are below all map mods.

Refer to the load order appendix for the exact sequence.

15.2.3 Missing Textures (Pink/Magenta)

Pink textures mean the game cannot load a texture file. This usually happens when a graphics or texture mod is placed below a map mod in load order (lower priority), and the map mod's sector references the texture but a higher-priority mod has overwritten it with an incompatible version.

Fix: Move all standalone texture packs (highway signs, building textures, road textures) above map mods in the load order. The rule of thumb: graphics mods load first, maps second, gameplay third.

15.2.4 Performance Stutters

Heavy mod profiles at 4K can exhaust VRAM quickly. MSI Afterburner overlay will show VRAM usage near 100% when stuttering occurs. Mitigation steps in order:

1. Reduce scaling from 400% to 300%.
2. Lower Grass Density from High to Medium.
3. Disable the most demanding graphics mods (4K tree packs, high-res building textures).
4. Reduce Mirror Resolution in game settings.

15.2.5 Truck Mod Manager Shows No Mods

The Mod Manager reads from Documents\Euro Truck Simulator 2\mod\. If the folder does not exist or mods were placed elsewhere (e.g., the Steam Workshop folder), the manager will appear empty.

Fix: Verify the path exists. Create it if missing. Move all .scs files into this folder. Ensure the files are not nested inside subdirectories — the Mod Manager reads flat .scs files only.

15.2.6 ProMods Compatibility Error

ProMods checks for specific DLCs at startup. The error message lists which DLC is missing. Common missing DLCs:

- *Iberia* (required for ProMods 2.70+)
- *Road to the Black Sea*
- *Beyond the Baltic Sea*
- *Scandinavia*
- *France*
- *Italy*
- *Going East!*

Fix: Purchase and install the missing DLCs through Steam. After installation, re-download the ProMods definition file (the definition file generation page detects your installed DLCs and creates a compatible version).

15.2.7 Reshade Not Appearing

Reshade may fail to hook into the ETS2 executable if launched with DirectX 11 or if the installation was interrupted.

Fix: Add eurotrucks2.exe to the game's launch options in Steam (Properties → General → Launch Options). If Reshade still does not appear, run eurotrucks2.exe again, select eurotrucks2.exe, re-select the preset file, and confirm the DirectX 10/11/12 option during setup.

15.2.8 Failed to Load Resource Warnings

The game log (Failed to load resource) contains Failed to load resource lines when a texture or model file exceeds the engine's per-file size limit.

Fix: Increase config.cfg in config.cfg:

```
mm_max_resource_size "60"
```

If errors persist for files larger than 60 MB, increase to 80. Monitor the game log after each change.

15.3 Reading the Game Log

The game log (Documents\Euro Truck Simulator 2\game.log.txt) is the primary diagnostic tool. Key patterns to search for:

Pattern	Meaning
00:00:00.000 : [mods] Active	Mod loaded successfully.
00:00:00.000 : [mods] Cannot find /`	A mod archive is corrupted or missing a required file.
00:00:00.000 : [dx11] Failed to create vertex buffer	VRAM exhausted or buffer size settings too low.
/	A unit definition (truck, trailer, cargo) failed to parse — usually a mod conflict.
00:00:00.000 : <ERROR> [fs] Failed to open file	A referenced file is missing from a mod or the base game.
00:00:00.000 : <ERROR> [traffic] Error parsing traffic rule	AI traffic mod conflict.

Search the log for WARNING and WARNING lines. A clean log from a vanilla profile has fewer than five errors. A modded profile will have some errors by nature — look for recurring or severe errors rather than chasing every warning.

15.4 Safe Mode Launch

If the game refuses to start due to a mod conflict, launch with all mods disabled:

1. Right-click ETS2 in Steam → Properties → General → Launch Options.
 2. Add -force_mods (this disables the mod check without removing files).
 3. Launch the game and enter the Mod Manager.
 4. Disable all mods, then re-enable them one group at a time to isolate the culprit.
 5. Remove -force_mods from launch options once resolved.
-

15.5 When All Else Fails

If you cannot resolve a crash or graphical issue:

1. *Clean profile:* Create a new profile in the profile picker with no mods. If it works, add mods one category at a time.
2. *Verify game files:* Steam → Properties → Installed Files → Verify Integrity of Game Files.
3. *Reinstall mods:* Delete all mods from Documents\Euro Truck Simulator 2\mod and re-download them fresh.
4. *Ask the community:* Post your game.log.txt (use a pastebin service) on the [SCS Forum](#) or the [ProMods forum](#) for expert troubleshooting.

16 Missing Mods

A catalogue of mods that do not yet exist (to the author's knowledge) but would meaningfully enhance the ETS2 experience. These range from technically feasible with existing tools to aspirational concepts that would require engine-level changes.

16.1 Mod Idea: Dynamic GPS with Real Landmarks

Concept: The in-game GPS navigation display shows only route lines and generic markers. This mod would replace the GPS map with a dynamic display that renders real landmarks — visible buildings, unique bridges, toll booths, and scenic viewpoints — as the player passes them. The GPS would show a simplified elevation profile of the upcoming terrain.

Why it doesn't exist (yet): The GPS rendering pipeline is hard-coded into the ETS2 engine and not exposed to modders via SCS's tools. Adding dynamic landmark rendering would require either reverse-engineering the GPS UI component (fragile across game versions) or a significant SDK extension from SCS.

Design sketch:

- Hook into the camera position and heading data from the game's API.
- Maintain a JSON database of landmark positions (latitude, longitude, name, type) keyed to map sectors.
- Render 2D silhouettes or simplified icons on the GPS screen using an overlay (external overlay application drawing over the game window).
- Elevation profile from sector heightmap data.

Role-Playing Value: Makes navigation feel real. Instead of following an abstract blue line, the player sees recognisable landmarks and can navigate by them — closer to how real truckers use GPS.

Priority: Medium

16.2 Mod Idea: Truck Maintenance & Repair Simulation

Concept: Adds depth to the existing damage/repair system. Trucks would accumulate wear on individual components (engine, transmission, brakes, tyres, suspension, electrical) based on mileage, load weight, terrain, and driving habits. Components have service intervals; skipping maintenance increases breakdown risk and degrades performance. Players would visit dedicated repair shops for diagnostics, order parts with delivery times, and schedule service.

Why it doesn't exist (yet): The game's damage model is shallow — a single HP value for the whole truck. Overhauling it to track per-component wear would require extensive reverse-engineering of the vehicle simulation layer. The UI for a parts catalogue, service scheduler, and diagnostic screen would be a substantial standalone project.

Design sketch:

- Use the game's accessory/part slots to represent components with hidden wear variables stored in the save file (via SII hooks).
- Wear rate formulas: each km multiplies base wear by load factor (heavy = more), terrain factor (off-road = more), driver behaviour (hard braking = brake wear).
- Trigger dashboard warning lights when service is due.
- Spawn repair-service jobs in the job market with parts-delivery cargo tasks.

Role-Playing Value: Transforms the truck from an invincible machine into something that needs care. Builds attachment to the vehicle and adds a meaningful money sink to the economy loop.

Priority: High

16.3 Mod Idea: Realistic Parking Tickets & Fines

Concept: The base game fines the player for running red lights, speeding, and collisions but ignores parking violations. This mod would add realistic parking enforcement: fines for blocking loading zones, parking on sidewalks, double parking, parking in bus lanes, and exceeding time limits at rest stops. Police vehicles would patrol rest areas and city zones, scanning for violations.

Why it doesn't exist (yet): Requires detection of the truck's position relative to fine-grained map zones (loading zone, bus lane, sidewalk) that the game does not natively tag. The map data from SCS includes road types but not curb markings or parking restriction metadata.

Design sketch:

- Define restricted zones as invisible polygons overlaid on map sectors.
- Track elapsed time when the truck is stationary in a restricted zone.
- Trigger fine event when the engine is off and the parking brake is set within a restricted zone beyond the allowed period.
- Police AI scan at predefined intervals; spawn a fine notification overlay.

Role-Playing Value: Encourages careful parking behaviour. Adds consequence to the "park anywhere" habit most players develop, pushing the simulation toward realism.

Priority: Low

16.4 Mod Idea: Personal Assistant / Radio Chatter

Concept: A cabin AI assistant that provides contextual audio and information during the drive: upcoming rest stop announcements, fuel prices ahead, traffic alerts from citizen-band (CB) radio simulation, weather warnings, and company dispatch messages. The assistant would be configurable per driver — voice style, talkativeness, information priority.

Why it doesn't exist (yet): Requires a complex event-driven audio system that monitors game state (position, time, weather, fuel level, job status) and triggers appropriate voice lines. Creating the voice assets alone is a multi-hundred-line script project. Integration with the game's audio engine for spatial mixing (sounds coming from the CB speaker vs. the dashboard) adds further complexity.

Design sketch:

- External application reads game state from the telemetry SDK (SCS provides a native telemetry DLL).
- A state machine decides what information to announce based on priority queue: urgent (low fuel, damage) > route (upcoming turn, rest stop) > ambient (weather, traffic).
- Voice lines generated via text-to-speech or pre-recorded samples organised by category.
- Output routed to a virtual audio device that the game's audio engine can spatialise.

Role-Playing Value: Solves the lonely-highway problem. A voice in the cabin creates the feeling of being connected to a dispatcher and a trucking community, even in single-player.

Priority: Medium

16.5 Mod Idea: Fuel Station Brand Loyalty Programs

Concept: Each fuel station brand (Shell, BP, Esso, Total, Lukoil, Aral) tracks the player's total fuel purchased. Reaching spend thresholds unlocks discounts (every 10th litre free, 5% discount at Gold tier, free truck wash at Platinum). Stations of the same brand display the player's loyalty tier on the pump screen. Competing brands offer sign-up bonuses to steal loyalty.

Why it doesn't exist (yet): The game does not track per-station-brand purchase history. Adding this requires a persistent data store keyed by brand ID that the save system must maintain across sessions. The UI for loyalty screens is not part of the standard display system.

Design sketch:

- Assign each fuel station prefab to a brand group via a data patch on the map sector files.
- Store loyalty points in the player profile save (extend the save schema via SII file editing).
- Apply discount as a price multiplier at the pump UI hook.
- Display tier progress on the company browser as a new tab.

Role-Playing Value: Adds a layer of economic strategy to refuelling. Players make route decisions based on brand preference rather than picking the nearest pump. Builds a sense of progression outside of jobs and garages.

Priority: Low

16.6 Mod Idea: Loading / Unloading Cargo Animations

Concept: Current cargo loading and unloading is instantaneous — the player reverses to the dock, presses Enter, and the cargo vanishes/appears. This mod would add timed, animated sequences: fork-lifts moving pallets, pump hoses connecting for liquid cargo, conveyor belts for bulk goods, and security checks for high-value cargo. Duration depends on cargo type and quantity.

Why it doesn't exist (yet): Animating cargo handling requires scripting events that interact with both the player's truck (trailer doors opening) and the delivery prefab (dock equipment). The game's animation system is designed for vehicle and character animation, not cargo-object manipulation, so each cargo type would need custom model work.

Design sketch:

- Define animation templates per cargo category (palletised, liquid, bulk, vehicle, container).
- Trigger the sequence when the player confirms delivery: lock the truck in place, play the timed animation, update the cargo state in stages.
- Use camera interpolation to allow the player to watch or skip the sequence.
- Store animation state in the job data to handle save-load mid-animation.

Role-Playing Value: Turns the moment of delivery from a button press into a reward sequence. Watching the cargo unload reinforces the reality of the haul — you see what you carried.

Priority: High

16.7 Mod Idea: Customs & Border Crossing Simulation

Concept: When crossing between non-Schengen countries in the ProMods / map combo areas (e.g., UK ↔ France, Turkey ↔ Bulgaria, Ukraine ↔ Poland), the player must stop at a customs checkpoint. A border guard inspects the truck (cargo documents, truck registration, driver ID, cab inspection). The

process varies by country pair — some are quick (EU internal), others are thorough (non-EU borders). Random inspection events add uncertainty. Missing documents result in fines or denied entry.

Why it doesn't exist (yet): Requires custom prefabs (customs booths with animated barriers, inspection bays) placed at every border crossing on every map mod in the combo. The game does not natively distinguish border-crossing roads from regular roads, so each crossing site must be hand-placed. Coordination with map mod authors is necessary for crossing points that span mod boundaries.

Design sketch:

- Define border zones as trigger regions at known crossing points (maintained as a JSON map of coordinates by country pair).
- On entry, trigger a GUI overlay: "You are approaching a border checkpoint. Have your documents ready."
- Spawn an inspection sequence: stop at booth, present documents (simulated inventory check), possible cab inspection (opens the interior camera).
- Apply time penalty (5-15 minutes of game time) for standard crossings; longer for inspections.
- Random events: document check fails (generate a fine), cargo inspection finds undeclared goods (heavy fine, impound), random vehicle search (time penalty only).

Role-Playing Value: The current game treats all border crossings as seamless. Adding border formality enforces the geography of Europe and turns country-to-country travel into a meaningful event. Especially valuable for ProMods users who drive through Eastern Europe and the Middle East.

Priority: Medium

16.8 Mod Idea: Dynamic Cargo Damage from Road Conditions

Concept: Cargo damaged based on road quality, driving behaviour, and weather, tracked per pallet/crate. Poor road surfaces in Eastern European map mods, harsh braking, sharp cornering, and heavy rain all apply damage. At delivery, the player sees a condition report — damaged cargo pays less. Specialised cargo (glass, electronics, pharmaceuticals) is more sensitive. Players can invest in better suspension, air-ride trailers, and cushioning materials to reduce damage rates.

Why it doesn't exist (yet): The game tracks cargo as a single unit with no internal damage state. Adding per-cargo-type fragility values and road-quality metadata to every map sector would be a massive data-modelling task. The cargo market UI would need new columns for fragility ratings.

Design sketch:

- Assign a fragility multiplier to each cargo definition (SII edit).
- Calculate road quality per sector from the road mesh roughness data (extracted from map tiles).
- Every physics tick, compute damage = fragility × road roughness × speed × lateral acceleration, accumulate per cargo item.
- On delivery, display damage report and apply penalty to payout.

Role-Playing Value: Makes cargo selection a strategic choice: high-paying fragile loads are a risk on rough routes. Raises the stakes for careful driving beyond the existing "no collisions" bonus.

Priority: Medium

16.9 Mod Idea: Truck Stop & Rest Area Variety Pack

Concept: The base game and most map mods use a small number of rest area prefabs repeated across the map. This mod would add dozens of unique rest stop designs: small roadside pull-offs

with a single bench, medium truck stops with fast food and showers, large travel centres with repair bays, fuel stations with dedicated truck lanes, scenic viewpoints with picnic areas, and weigh station / inspection site rest zones. Each tier offers different services (shower, food, repair, fuel discount).

Why it doesn't exist (yet): Creating 30+ unique prefabs is a significant modelling, texturing, and placement effort. Each rest stop must be hand-placed in the map editor, and the map sectors across multiple map mods (ProMods, RusMap, ROEX) would need coordination to avoid overlaps.

Design sketch:

- Define a prefab library of rest stop types with service capabilities.
- Place them at realistic intervals (every 50-100 km on highways, every 200 km on motorways outside cities).
- Service availability shown on the rest stop info card when pulling in: fuel, repair, food, shower, Wi-Fi, parking fee.
- Higher-tier travel centres offer better rest recovery rates.

Role-Playing Value: Breaks the monotony of identical rest areas. Each stop becomes a deliberate choice based on what the driver needs — fuel, rest, repairs — rather than a random pull-over.

Priority: Medium

16.10 Mod Idea: Tow Truck & Roadside Assistance

Concept: When the truck is immobilised (engine damage, fuel exhaustion, major collision), instead of auto-recovering to a service station the player calls roadside assistance. A tow truck arrives (real-time delay based on proximity to the nearest service centre), hooks up, and tows the truck to the nearest repair facility. Cost depends on distance and cargo type. Players with a high repair skill or premium roadside membership get faster response times and discounts.

Why it doesn't exist (yet): Requires a complex state machine that takes control of the player's truck away and attaches it to a tow-truck AI vehicle pathing to the nearest repair prefab. The auto-recovery system is deeply embedded — replacing it without breaking the existing save integrity logic is challenging.

Design sketch:

- Hook into the damage-state detection when the truck speed drops to 0 and engine damage exceeds 80%.
- Disable auto-recovery; display a roadside assistance UI with cost estimate.
- Spawn a tow-truck AI vehicle at the nearest service centre and path it to the player's location.
- Attach the player's truck to the tow truck via the articulation joint system.
- Camera switches to cinematic view of the tow or stays in cabin; player waits in accelerated game time.
- Deliver to the nearest repair prefab; calculate tow cost (base + per-km + cargo surcharge).

Role-Playing Value: Breaks the immersion-breaking "poof, you're at a garage" auto-recovery. Every breakdown becomes a memorable story event. Encourages preventive maintenance and careful driving.

Priority: Low

16.11 Mod Idea: Co-Driver / Relief Driver System

Concept: Players can hire a co-driver who rides in the passenger seat on long hauls. The co-driver takes over driving when the player needs rest (simulating real team-trucking operations). Co-drivers have skill levels (driving, navigation, fuel efficiency, safety rating) that improve over time. They can also handle drop-off/pick-up paperwork, reducing rest-stop delays. Visual presence in the passenger seat with idle animations.

Why it doesn't exist (yet): The AI driver system exists only for owned trucks (garage management) and does not control the player's truck. Giving the AI control of the player's current vehicle while the player watches from the passenger seat requires a significant extension of the AI driving model, including the ability to handle the player's specific truck configuration.

Design sketch:

- Extend the garage driver system: assign a driver to the "co-driver" slot on the player's truck.
- Co-driver gains experience per km driven with the player.
- At rest stops, option to switch seats: co-driver takes the wheel, player rests in sleeper (accelerated time).
- Co-driver skill affects fuel efficiency, damage avoidance, and rest-stop speed.
- Visual model in passenger seat with basic idle animations.

Role-Playing Value: Simulates team driving, which is common in long-haul real-world trucking. Adds a management layer to the in-cab experience and creates attachment to specific driver characters.

Priority: Low
