 - Enemies & Aliens 18
 - Weapons & Gear 19
 - Cosmetics & Visuals 20
 - Audio & Sound 21

Installation

Game Prep

This guide targets **XCOM 2: War of the Chosen** on Steam.

1. Install **XCOM 2** and the **War of the Chosen** expansion on Steam.
2. Launch the game once, all the way to the main menu, so Steam and the game finish their first-time setup.
3. Confirm the version. The last official patch is **Build 8270065** (24 February 2022; branch update 28 March 2022). No further official content patches exist.

Note: This guide's mods come from the **Steam Workshop**, by far the largest mod community for XCOM 2. Every mod card in the modlist chapters links its Workshop page. Subscribe there; nothing else is needed to get a mod into your game.

Alternative Mod Launcher (AML)

The **Alternative Mod Launcher** (AML) is a community-standard replacement for the official game launcher, for XCOM 2 and XCOM Chimera Squad. This guide uses AML because it is far more capable and reliable than the official launcher for managing a large mod set.

What AML gives you, from its official README:

1. Replaces the official game launcher entirely.
2. Steam Workshop support in the launcher: mod details, tags, changelog, dependencies, unsubscribe.
3. Mod categories and profiles.
4. A configuration editor - change a mod's configs right in the launcher - and configuration saving to disk.
5. Search/filter options and editable mod descriptions.
6. Basic compatibility checks (duplicate IDs, class and screen-listener conflicts).
7. Cleans stale **ModOverride** entries from XComEngine.ini - the official launcher's known corruption problem.

Requirements (official README):

1. XCOM 2 (WotC) - the game this guide targets.
2. Steam installed and running.
3. Microsoft .NET Framework 4.7.2 or later.
4. 64-bit Windows.

Installing AML

1. Download the **latest stable release** from the Releases page: github.com/X2CommunityCore/xcom2-launcher/releases. Take the **zip archive** under the "Assets" section, below the release notes.
2. Extract **all files** from the zip into a folder of your choice with **write access** - the Desktop is the safest option. Avoid system folders such as c:\Program Files\ or c:\Windows.
3. There is no installer. Run XCOM2 Launcher.exe from the extracted folder.

Warning: If the archive contains no .exe, you downloaded the **source-only** archive - the wrong download. Grab the release zip under "Assets" instead.

Tip: settings.json next to the launcher holds your AML configuration. Back it up if you ever copy files between AML folders - overwriting it with an older copy loses your setup.

First Launch

1. The **Welcome Dialog** asks which game this copy of AML should manage. Select **XCOM 2 (WotC)**. This is a one-time selection that cannot be changed later - if you also want AML for XCOM Chimera Squad, use a second copy of AML in its own folder.
2. AML offers anonymous error reporting. It helps the developers find bugs; enabling it is recommended but optional.
3. AML tries to detect the game's installation directory automatically. If that fails, configure the path manually (see the official wiki's Troubleshooting page, linked below).
4. On startup AML automatically **searches for new mods** and **updates mod information** for everything it finds. This is the same as File -> Search for new mods and File -> Update mod information from the menu bar.

Steam Workshop Workflow

1. **Subscribe.** Open each mod card's Workshop link and click Subscribe on the mod's Workshop page. Steam downloads the subscription automatically - XCOM 2 has no separate "install mod" step.
2. **Refresh in AML.** In AML, use File -> Search for new mods to pick up new subscriptions, then File -> Update mod information to refresh metadata (AML also does both automatically at startup).
3. **Enable and order.** Enable mods with their checkboxes and arrange load order as the mod cards direct. Categories and profiles keep the list organized.
4. **Import previous state (optional).** Tools -> Import active mods re-enables everything that was active the last time XCOM was launched, whether from the official launcher or another AML copy.
5. **Launch.** Start the game **from AML**. AML replaces the official launcher, so the game boots directly with your chosen load.

Tip: Because AML replaces the official launcher, it sidesteps the launcher's known habit of writing stale ModOverride entries into XComEngine.ini and dropping mods from your load. AML even cleans up entries the official launcher already wrote.

Warning: Steam must be installed **and running** for AML to see Workshop mods. If the game updates, re-check Build 8270065 and re-verify your mods before playing.

Updating AML

1. Download the new release zip and extract it **over the existing AML folder**, overwriting all files.
2. When copying between folders instead of extracting a fresh archive, do not overwrite the new folder's settings.json with an older copy.
3. Config compatibility follows the **major version**: same major version = compatible; switching to a new major version may require re-configuring.

Verify

1. Start the game through AML.
2. In the main menu, open the mod list (the "Mods" button) and confirm the mods you enabled in AML are present and active - it is the authoritative view of what is loaded.
3. Play the opening mission(s) and confirm the mods behave the way the guide describes.

Note: Official AML resources: [repository](#), [Installation](#), [Getting started](#), [Troubleshooting](#). AML is GPLv3 open source; the AML logo is based on the XCOM 2 logo (Firaxis property).

Overview

What This Guide Is

XCOM fell. XCOM rose. **The 3rd Coming** is the name for the third time the resistance answers the call - a curated XCOM 2: War of the Chosen experience built on the final, stable game build (8270065, February 2022), managed with the community-standard Alternative Mod Launcher, and stocked from the Steam Workshop.

The guide is organized by category. Each category chapter explains what its mods do to the game, and every mod appears as a **mod card**: a clickable Workshop link plus the facts that matter for playing with it - what it depends on, what it changes, and how to configure it.

New to XCOM 2, or back after years? The **How to Play** chapter explains the two layers of the game - the Avenger strategy layer and the tactical missions - the classes, the Chosen, and how to survive your first campaign. The **Vanilla Strategy** chapter then gives concrete, wiki-grounded recommendations for building order, squad composition, and research priorities.

Ground Rules

1. **The user supplies every mod.** On 2026-08-12 the user supplied the [WOTC] Core Collection (Steam Workshop, 75 mods) as the baseline; every card in this guide is transcribed from that collection page. The project does not add, validate, filter, or research mods.
2. Each card documents exactly what the user supplied: **name + URL** and the collection's own **description**. A field the user did not supply (**dependencies, system / mechanic impact**) stays out of the card.
3. Decisions and open questions live in the project's `STATUS.md`; conflicts and future ideas live outside this PDF.

How to Read a Mod Card

Every card carries the same four fields:

1. **Name** - the mod's name; clickable and linked to its Workshop page.
2. **Dependencies** - what the mod needs to work, exactly as the user stated them: other mods, the base game, or War of the Chosen features.
3. **Impact** - the system / mechanic the mod touches and what it changes about how the game plays.
4. **Notes** - anything else that matters, transcribed from the collection page: load-order position, configuration steps, or quirks.

As cards are added, each one states exactly this information and nothing more. Fields the user did not supply stay out of the card.

The Categories

1. **Core & Framework** - foundational systems that other mods build on.
2. **Quality of Life** - convenience and automation that reduce busywork.
3. **UI & HUD** - interface, screens, and information display.
4. **Classes & Skills** - soldier classes, abilities, and skill trees.
5. **Enemies & Aliens** - the opposition: behavior, roster, and threat.
6. **Weapons & Gear** - items, equipment, and loadout options.
7. **Cosmetics & Visuals** - appearance of soldiers, environments, and effects.
8. **Audio & Sound** - music, voice, and sound design.

The category list is a draft, open to adjustment by the user.

How to Play

The Two Layers

XCOM 2: War of the Chosen plays on two alternating layers:

1. **Strategy layer** - you command the Avenger (a flying alien ship turned mobile base) on the global map, the **geoscape**. You build rooms, research alien tech, manage resources, scan sites, run covert actions, and decide which missions to accept. Time here moves in days; every decision shapes the tactical fights ahead.
2. **Tactical layer** - you command a squad of soldiers on the ground, turn by turn, in missions unlocked from the geoscape. Tactical victories earn soldiers, resources, and research, which feed back into the strategy layer.

The campaign has a hard global clock: the **Avatar Project** slowly completes. If its meter fills, the game is lost. You buy time by raiding alien facilities and completing story missions - and you should spend that time growing your squad and technology before the final assault.

The Strategy Layer (Avenger & Geoscape)

The Avenger. Build and staff rooms by assigning **engineers** and **scientists**:

1. **Guerrilla Tactics School (GTS)** - train rookies into classes and increase squad size. Build this early.
2. **Advanced Warfare Center / Infirmary** - reduces wound recovery time (WOTC).
3. **Proving Ground** - build experimental items, upgrades, and armor.
4. **Resistance Ring** - unlock and run **Covert Actions** (WOTC).
5. **Training Center** - spend **Ability Points** on extra soldier abilities (WOTC).
6. **Psi Lab** - train **Psi Operatives**, unlocked later in the campaign.
7. **Shadow Chamber** - predicts enemy forces on missions and unlocks the final story missions.
8. **Workshop, Laboratory, Power Relay, Comms** - more engineering, research, power, and contact slots.

Resources. Four main currencies: **Supplies** (monthly income from resistance contacts; funds most purchases), **Intel** (spent on scanning, revealing the map, and black-market deals), **Alloys** and **Elerium Cores** (advanced armor, weapons, and upgrades). WOTC adds **Ability Points** for the Training Center.

Research. Spend scientists on autopsies and projects. **Breakthroughs and Inspirations** (WOTC) offer one-time research bonuses that nudge your progression. Research weapons and armor tiers: conventional, magnetic, plasma.

Dark Events. Each month ADVENT plans a **Dark Event** - a nasty global effect. A corresponding guerrilla-op mission lets you counter one; the rest fire anyway. **Chosen Dark Events** are handled by mods in this guide's Enemies category.

Contacts & income. Scan the geoscape to contact new resistance regions (more monthly supplies) and reveal sites. Scanning takes time - and the Avatar clock never stops.

Tip: The strategy layer is a juggling act, not a race. Accept missions that earn **Supplies** and **Intel** consistently, keep research running, and never let the Avatar Project hit zero without a facility raid queued up.

The Tactical Layer (Missions)

Every soldier starts each turn with **two action points**. Movement within the "blue" half-zone leaves one action to shoot or use an ability; dashing into the "yellow" zone uses both. **Concealment** is key early - a concealed squad can scout, position, and ambush before the enemy reacts. Most hostile actions (shooting, hacking, grenades) **reveal** the squad.

Cover decides who lives. Low (half) cover grants +20 Defense; high (full) cover grants +40. Flanking an enemy cancels their cover bonus entirely - a flanked soldier is a dead soldier. Most destructible cover can be blown away with explosives (this is where Grenadiers earn their keep).

Overwatch lets a soldier fire a reaction shot at the first enemy that moves in their line of sight. Overwatch traps - ending the turn in cover with everyone on Overwatch - punish enemies that break concealment or dash. **Gotcha Again** and **Less Overwatch Lock Ups** (UI & HUD / Core categories) make these setups reliable.

The basics of every firefight:

1. Never dash into unexplored fog - you reveal, they shoot first.
2. Fight for high ground: +20 Aim and line-of-sight advantages.
3. Kill or disable active pods before revealing more. One pod at a time is a fair fight; three pods is a funeral.
4. When a soldier drops to zero HP they **bleed out** - stabilize them (medikits, a Specialist's Medical Protocol) or they die.
5. Timed missions (most guerrilla ops) force aggressive play; untimed ones (retaliation, some story missions) reward patience.

Soldiers & Classes

Soldiers start as **Rookies** and gain ranks through missions: Squaddie, Corporal, Sergeant, Lieutenant, Captain, Major, Colonel - and **Brigadier** in WOTC, reachable via the Training Center with Ability Points. Each promotion grants new abilities; class choice is locked at Squaddie.

The four base classes:

1. **Ranger** - shotgun and sword. Scout and close-range killer. Signature abilities: **Phantom** (stays concealed after the squad is revealed), **Run and Gun** (acts after dashing), **Slash**.
2. **Grenadier** - cannon and grenade launcher. Destroys cover and shreds armor. Signature abilities: **Shredder**, **Suppression** (pins enemies), **Salvo** (fires a heavy weapon without spending an action).
3. **Sharpshooter** - sniper rifle and pistol. **Squadsight** lets them shoot at what allies see; **Death From Above** refunds an action on high-ground kills; a **Gunslinger** build dominates mid-range with pistols.
4. **Specialist** - assault rifle and GREMLIN drone. Hacker and medic: **Medical Protocol** (remote heal/stabilize), **Combat Protocol** (armor-bypassing drone damage), **Haywire Protocol** (hack and take control of enemy robots).

WOTC hero classes (one per faction, powerful and unique):

1. **Reaper** - stealth infiltrator. Scouting, claymore traps, and guaranteed-damage shots that don't reveal. Their **Banish** ability (modded back in by the Cinematic Rapid Fire mod) shreds single targets.
2. **Skirmisher** - ex-ADVENT rebel. Extreme mobility, multi-action turns, and a grappling hook. **Justice** yanks enemies out of cover.
3. **Templar** - psionic melee warrior. Generates **Focus** in combat, parries incoming attacks, and spends focus on devastating psi-blade strikes.

Psi Operatives (Psi Lab, mid-to-late campaign) learn psionic powers instead of class abilities - no aim checks, just raw psi. **SPARKs** (Shen's Last Gift DLC) are heavy combat robots: no fatigue, no bonds, but expensive to build and repair.

Ability Points, Bonds & Fatigue (WOTC)

WOTC's soldier progression layer:

1. **Ability Points (AP)** - earned from promotions, bonds, and some covert actions. Spent at the **Training Center** to buy abilities from other classes or promote past Colonel to Brigadier.
2. **Bonds** - pairs of soldiers who fight together build a bond over time, unlocking passive buffs and bond abilities (each can assist the other). Bonded pairs are worth keeping on the same squad.
3. **Fatigue** - soldiers become **Tired** after missions and need rest; deploying a tired soldier risks **Shaken** (a negative trait). Rotate your roster - a bench of rested soldiers wins campaigns.

Note: The mods in the Classes & Skills category (Reliable Ever Vigilant, Ability Interaction Fixes, More Psionic Units, and others) repair and refine these systems - check each card's Notes for exactly what it touches.

The Chosen

The Chosen are WOTC's three boss enemies - the **Assassin**, the **Hunter**, and the **Warlock** - each with unique strengths and weaknesses randomized per campaign. They are the expansion's main antagonists and hunt your soldiers across missions and regions.

1. **The Assassin** - stealth and close combat. Enters concealment, blinds your soldiers, strikes with her sword, then escapes back into hiding. Hit-and-run terror.
2. **The Hunter** - long-range specialist. Keeps his distance, fires a two-turn **Tracking Shot**, summons ADVENT reinforcements, and flanks with his grappling hook.
3. **The Warlock** - psionic master. Chain-dazes, mind-controls, teleports allies, and summons **Spectral Zombies** and a **Spectral Army** when threatened.

How they escalate: killing a Chosen on a mission only wounds them - they resurrect at their Citadel and return. Each Chosen gains **knowledge** of XCOM (from appearances and interrogating captured soldiers) and uses it for **sabotage**: cutting your income, injuring staff, destroying inventory, delaying research. At maximum knowledge they **assault the Avenger**; losing that defense ends the game.

How to end them for good: each Chosen is permanently killed by raiding their **Citadel** (Stronghold Assault), unlocked by completing a 3-part series of covert actions for their rival faction - part 1 needs a Sergeant, part 2 a Lieutenant, part 3 a Major. The assault is two-stage: fight to the Ascension Chamber, then destroy the **Sarcophagus** that fuels their resurrection (the Chosen revives mid-fight until the Sarcophagus falls). Victory grants their unique weapons (e.g. the Assassin's **Arashi** and **Katana**, the Hunter's **Darklance** and **Darkclaw**, the Warlock's **Disruptor Rifle**).

Tip: Check the Chosen's weaknesses before engaging - they always have an **Adversary** weakness against one faction (Reaper, Skirmisher, or Templar). Bring that faction's hero class and you deal bonus damage all mission.

The Lost & New Threats

WOTC adds three new threat types:

1. **The Lost** - mutated husks of the first invasion's victims, in swarms. Weak individually; dangerous in numbers. Headshot kills don't cost an action, so one soldier can clear many; explosions attract more swarms, fire hurts them badly, and they're immune to mind-affecting psi.
2. **The Spectre** - a stealthy alien that creates **dark copies** of your own soldiers from their shadows. Kill the Spectre or the copy; the copied soldier is held until then.
3. **ADVENT Purifier** and **ADVENT Priest** - the Purifier lobbs incendiary grenades (see the Purifier Grenades Fix mod), the Priest is psionically charged with stasis and mind games.

SITREPs (WOTC) are per-mission modifiers that change the fight - e.g. **The Lost World** (Lost on every mission), **Between the Eyes** (Lost are always one-shot), **High Explosives** (more explosives), or **Marksman** (more Sharpshooters). Check the pre-mission briefing and adapt your loadout.

First-Campaign Tips

1. Build the **GTS** first and prioritize the squad-size upgrade - five and six soldiers beat four, every time.
2. Run a balanced squad: a Grenadier for cover destruction, a Specialist for hacking and healing, a Ranger for scouting, a Sharpshooter for long-range support.
3. Use **concealment** aggressively: scout the pod, set up the overwatch trap, then break concealment with a grenade.
4. Don't neglect **Research** - armor and weapon tiers matter more than any single ability.
5. Keep **Intel** in reserve for emergencies (revealing the Blacksite or a facility raid) and spend the rest on contacts and scanning.
6. WOTC's **covert actions** and **resistance orders** are a second economy - run them every cycle, they cost nothing but time.
7. Losing soldiers is part of the game. Recruit more rookies than you think you need, and level a bench before you need it.

Vanilla Strategy

Suggested Building Order

The **Resistance Ring** first, the **Guerrilla Tactics School** second - that is the community consensus for WOTC, and it is what this guide recommends.

1. **Resistance Ring (1st)**. Unlocks **Covert Actions**, the most efficient early source of supplies, soldiers (including faction heroes), engineers, scientists, and even Avatar Project stall. Its benefits snowball from month one.
2. **Guerrilla Tactics School (2nd)**. Its headline upgrade is **Squad Size I** (4 -> 5 soldiers), the single most powerful upgrade in the game, followed by **Squad Size II** (5 -> 6). It also trains rookies into a class of your choice and sells army-wide upgrades (**Vulture**, **Wet Work**, **Integrated Warfare**, **Stay With Me**). Construction: 85 Supplies, 3 Power, 14 days. Because Squad Size I requires a Sergeant, starting with the Ring lets your soldiers earn that rank while the GTS builds.
3. **Flexible 3rd-4th: Proving Ground** (Plasma Grenades, experimental ammo, Mimic Beacons), **Training Center** (spend Ability Points, promote to Brigadier), or a **Power Relay** (expansion needs energy).
4. **As needed: Infirmary** early if injuries are piling up; **Psi Lab** once you have a stable squad and spare time; **Shadow Chamber** when the story demands it (it also pauses normal research while running its projects).

Warning: Never demolish the GTS - you lose every purchased army-wide upgrade with it. It has no engineer slot, so don't try to feed it Workshop adjacency bonuses.

Tip: Your bottleneck in WOTC is almost never research speed - it is Supplies and Engineers. Prefer buildings with direct tactical or strategic output over labs early.

Suggested Squad Composition

A balanced 6-soldier squad covers five roles. The community-standard "foundation" squad:

1. **2 Grenadiers** - armor shredding and cover destruction, the kings of the battlefield.
2. **1-2 Rangers** - close-range flanks, melee, and scouting (**Phantom** scouts stay concealed).
3. **1-2 Sharpshooters** - long-range firepower (**Squadsight**), or the pistol **Gunslinger** build for mobility.
4. **1 Specialist** - heals, hacks, **Haywire Protocol** for enemy robots, and mission objective hacking.
5. **1 flex slot** - a faction hero (Reaper for best-in-class scouting, Templar for melee power, Skirmisher for versatility) or a Psi Operative late game.

Adjust by mission type: timed missions favor mobility (Rangers, Skirmishers); Lost missions favor Sharpshooters with **Serial**; Chosen fights want armor shredding and burst damage.

Tip: Fatigue and injuries mean a single perfect squad loses campaigns. Aim for two deep "A-teams" - roughly 10-12 leveled soldiers - and rotate. Bonded pairs (see How to Play) should deploy together.

Research Strategy

The guiding rule: **firepower first, survivability second, utility third**. Research priorities in order:

1. **Modular Weapons** -> **Magnetic Weapons** as soon as available. Magnetic Weapons (about 6,500 research points on standard difficulty) is the campaign's key offensive breakpoint - you want it before ADVENT MECs become common. Unlocks the Magnetic Rifle, Shard Gun, and Mag Pistol; prerequisite for Gauss Weapons.
2. **Hybrid Materials** -> **Plated Armor**. Keeps your leveled soldiers alive through the mid-game.

3. **High-value autopsies** (need the corpse): **Sectoid Autopsy** (unlocks Psionics and Mindshields), **Viper Autopsy** (Battlefield Medicine), **Faceless Autopsy** (Mimic Beacon - one of the best items in the game), **ADVENT MEC Breakdown** (GREMLIN Mark II, unlocks Elerium research).
4. **Resistance Communications / Resistance Radio** - more contacts mean more monthly Supplies and more missions. Take these when income starts limiting you.
5. **Mid-game: Elerium** -> **Powered Armor** and the **Plasma Rifle** line (Storm Gun, Beam Cannon, Plasma Lance), **Gauss Weapons** as the second weapon tier.
6. **Shadow Chamber projects** when available (Blacksite Vial, Codex Brain, Encrypted Codex Data, Psionic Gate, Avatar Autopsy) - these advance the story and unlock the final missions; they pause standard research while running.

Note: WOTC adds **Breakthroughs and Inspirations**: random one-off bonuses that appear as you research. Take good ones when they arrive (e.g. cheaper/faster Magnetic Weapons), even if they shift your order slightly.

Tip: Autopsies get **faster with each additional corpse** of that enemy - most can eventually complete instantly. Don't autopsy your only body if a bigger research goal is queued.

The Modlist

Every mod in this guide appears as a **mod card**: a clickable Workshop link plus the facts that matter — dependencies, system / mechanic impact, other notes. The cards are transcribed from the user-supplied baseline, the [WOTC] Core Collection (75 mods); a field the user did not supply stays out of the card.

Core & Framework

Foundational systems other mods build on: engine-level fixes, framework libraries, and utilities that sit underneath the rest of the load. Cards in this category usually load first and are required by other categories' mods - check each card's Dependencies field.

Engine & Framework

X2WOTCCommunityHighlander v1.31.0

Notes: Highlander replaces a big portion of the game's code in order to make it more moddable and mod-compatible, as well as fix a lot of bugs. As implied by the name, only one Highlander mod can be used at a time.

[WotC] Mod Config Menu

Notes: This mod (MCM) is a shared settings menu. Some mods require this mod in order for you to use the in-game configuration menus.

[WOTC] Core Collection Meta Mod

Notes: This meta mod contains various compatibility patches, configuration and bug fixes for the mods in the Core Collection and the game itself. Other than Highlander, Core Collection Meta Mod is the closest thing we have to a 'community patch mod'.

Stability & Performance

[WOTC] Less Overwatch Lock Ups!

Notes: 'Less Overwatch Lock Ups!' is a bugfix mod, to hopefully cut down on 'soft locks' during complex overwatch/reaction fire situations, and also when a soldier is revealed by enemy movement. A 'soft lock' is when the game doesn't crash as such, but is stuck.

Visibility Condition Bandaids For Rapid Fire And Friends

Notes: In high population tactical missions, abilities with followup shots can result in the game lagging whenever the unit with them moves due to the game evaluating it's use against every single target on the mission.

Quality of Life

Convenience and automation that remove busywork: faster actions, smarter defaults, and information that should have been visible anyway. The stated goal is fewer clicks and fewer surprises - not easier battles. Check each card's Impact field for exactly what it changes.

Camera & Controls

Free Camera Rotation

Notes: Sets default rotation angle to 45 degrees. Enables free camera rotation while holding down Q and E keys (in analog mode, see hotkeys).

Clean Camera Angles Fix

Notes: For use with mods that alter the camera rotation to be 45 degrees instead of the default 90 (i.e Free Camera Rotation, LW2).

[WotC] Better Grappling!

Notes: Have you ever had that annoyance of grappling points highlighting but not being able to select them with the mouse? This is particularly prevalent in the final mission, but there are occurrences on other maps.

[WOTC] Fixed Sniper Hotkeys

Notes: This is a WOTC port of ADVENT Avenger's Fixed Sniper Hotkeys mod, fixing the incompatibilities with Evac All of the original mod.

Action Convenience

Overwatch All/Others WotC

Notes: Adds the ability to put all/other units with action points on Overwatch. This mod will save you a lot of time.

[WOTC] One squad on new Avenger defense

Notes: Changes the chosen defense mission to use 1 squad of 10 instead of 2x5. This is much more convenient when you have robojumper's Squad Select that can display more than 6 soldiers at once.

Evac All - WotC

Notes: The game is not receiving updates, nor is the mod. When they suddenly stop working for people it's inevitably a conflict/configuration issue on the user.

[WOTC] Mission Launch Auto Save

Notes: This simple mod creates an Auto Save on the Avenger whenever you click 'Launch' in Squad Select, using the name of the Operation as the name of the save file. This can be useful if your game tends to crash when loading into a mission.

[WOTC] Instant Color Menus

Notes: Makes color selection menus load much faster. This feature is taken from Stop Wasting My Time - WotC, all credits go to their original authors. I just wanted this one feature without other things done by that mod.

Loot & Economy

[WOTC] Loot Post Mover

Notes: The aim of this mod is to split the loot drop posts from the centre of the drop zone to the fore and aft edges, so that should you get a Psi/Focus Loot in the same spot as a Vulture/Timed Loot, both are easily visible.

[WOTC] Sell Heavy Weapons

Notes: Every item in the game, whether it be a weapon, an armor, or a utility item, has a price. The only thing that keeps XCOM from selling their entire stock to the Black Market is this set of restrictions.

Recovery

[WOTC] Reliable Wounds

Notes: This mod makes wound/repair times depend on wound severity, like MachDelta's Wound Recalibration. A soldier with a lighter wound will never take longer to heal than a soldier with a heavier wound.

UI & HUD

Interface, screens, and information display: what the game shows you and how you interact with it - the geoscape, the tactical HUD, soldier loadout screens, and mission briefings. Pure presentation unless a card's Impact says otherwise.

Squad & Roster Screens

WotC: robojumper's Squad Select

Notes: My personal take on a Squad Select Screen! Completely built from the ground up! Features: User Interface for more than 6 soldiers. How many? There's no limit! Scroll or Drag&Drop. More intuitive with built-in overview!

[WOTC] Show All Class Counts

Notes: Displays how many soldiers of each class do you have at the top of the Armory interface, including rookies, faction hero classes and SPARKs.

[WOTC] Detailed Soldier Lists Redux

Notes: This is my REDUX of -bg-'s amazing Detailed Soldier List. I had been sitting on this mod redux for well over a year waiting on some contact from -bg- with no response given.

[WOTC] Extended Personnel Info Redux

Notes: This mod is my personal redux of Extended Personnel Info by Astral Descend. Made and released with permission. This mod adds useful info such as soldier bond details, skills and loadout to personnel screens.

[WOTC] Show Current PCS

Notes: This is a simple mod that adds a box to display the currently equipped PCS on the PCS selection screen.

[WOTC] Stats on New Promotion Screen

Notes: Adds the soldier stats to the new promotion screen! Compatible with New Promotion Screen by Default (obviously), RPG Overhaul and any other class mod that uses Brigadier rank.

[WOTC] Community Promotion Screen

Notes: Community Promotion Screen is an expanded and improved version of the New Promotion Screen by Default. It replaces the standard soldier promotion screen with a modified version of the 'Faction Hero' promotion screen that was added in War of the Chosen.

Tactical HUD & Unit Info

WOTC - Extended Information!

Notes: For Mac/Linux Users: We've been informed that you may be experiencing performances issues after the last update. But without the support of a proper development tool on MacOS/Linux we can't tackle it down.

(WOTC) UI Mod for Defense/Mobility/Psi

Notes: Mods the UI to show some useful (at least to me) information. If you have equipment or an ability that boosts or penalizes your (normally hidden) Defense stat, it will appear.

[WOTC] Show Health Values

Notes: Shows the value of HP next to the cover icon, no more counting sectopod's HP. You may customize the mod by changing XComTacticalHP.ini.

[WOTC] Cost-Based Ability Colors

Notes: This is an updated version of Cost-Based Ability Colors for WOTC. All credit for the original mod and concept goes to infectedm and you should go rate it if you haven't already.

[WOTC] Passive Icons Core Collection Edition

Notes: This was a 'cloned version' of my Passive Icons mod, stripping out any config options and gameplay changes. This version has pretty much been rewritten, cleaned and optimized by Iridar for inclusion into the Core Collection.

(WOTC) Domination Icon

Notes: Have you ever had a squad with a few Psi Ops throwing around quite a bit of Insanity and Domination, and you forget which of your mind-controlled aliens are your friends forever (or at least the rest of the mission)?

[WOTC] Lost Lure Status Icon

Notes: Simple mod to tweak the Ultrasonic Lure to show which enemies are under the affect of the Lure. The status effect is shown now in two ways: Configurable Unit Flag icon to tell at a glance if they are under the effect.

[WOTC] Spectral Zombie Warning Signs

Notes: Very simple mod that patches in a little bit of helper text for the Chosen Warlock's Spectral Zombies. Originally, when they prime for self-destruct they just glow at you. Now, when they prime for self-destruct, they will be flagged.

Evac Now

Notes: This mod renders the evac zone target in yellow instead of blue if there are any soldiers who cannot reach the selected area this turn. It doesn't prevent you from placing the evac zone, it only appears in a different color.

Yet Another F1

Notes: This mod is compatible with War of the Chosen. The Alternative Mod Launcher may be required to enable it for WotC. Adds an XCOM EU/EW/LW style unit information screen to the game. Stats. Equipment. Equipment Stats. Abilities, Passives, Buffs, Debuffs!

Geoscape & Management

Upcoming Events [WotC]

Notes: Upcoming Events in Hours updated for WotC. This is a rough update of Upcoming Events in Hours for War of The Chosen. Above a threshold of hours set in XComEventHours.ini (default 48), days will be listed (rounded up).

[WOTC] Hours Instead of Days

Notes: Adds mission remaining times on the sites list at the bottom of the geoscape. Also displays scan time remaining in hours below a certain threshold. (Default is 48 hours, configurable in XComGame.ini)

[WOTC] Accurate Situation Report

Notes: Did you know that the SitRep details screen in WOTC, which players use to preview the SitReps they will face on the upcoming mission, is utterly broken for missions with more than one SitRep?

[WOTC] Standardised Resources Bar

Notes: The aim of this mod is to re-organise, sort and standardise the resource bar across all screens, showing resources that make sense for the screen. The entire event is now driven by configs.

Blackmarket Usage

Notes: Displays possible usage of items on the blackmarket sell screen. No more wondering whether you still need Advent Trooper Corpses. Data is gathered dynamically, so modded items, costs etc should show up as well.

[WOTC] Item Stats in Engineering

Notes: A small quality of life mod that lets you view item's stats on the Build Items screen in Engineering. Especially helpful if you use a lot of mods that add new items. To view item stats, click the small 'Info' button at the bottom of the screen.

WOTC Nice Mission Debriefing

Notes: A follow-up to Mission Award Variety, Nice Mission Debriefing for War of the Chosen shows extended stats and awards for your soldiers at the end of a mission.

[WOTC] Full Shadow Report

Notes: This mod is heavily inspired by WOTC Show Enemies and Terrain on Mission Planning by Sebkulu. It is essentially a 'new' mod, so no permission was sought for the posting.

Menus, Lists & Interaction

[WOTC] New Target Icons

Notes: Adds more target icons for regular, WOTC and modded enemies - 30 new icons for the targets designed by me. I tried to match them as close to original icons as I only could.

[WOTC] Better Armory Item Stats

Notes: This mod improves the stats display of weapons, utility items and upgrades in the Armoury, including adding display of Critical Damage, Armor Pierce and Shred for all appropriate weapons.

Smooth Scrolling

Notes: Makes scrolling smooth. Everywhere. Overrides: UIScrollbar. Incompatible with my Capped Scrolling Speed. You should switch to this one, it has that functionality included.

[WotC] Gotcha Again

Notes: This mod improves on the Line of Sight indicators that are shown when previewing moves in the tactical game. This version is specifically for use with War of the Chosen.

WotC: Color Coded Bonds

Notes: Adds custom color codes to soldier bonds in most places. Due to restrictions in Firaxis' UI code, that doesn't work everywhere. It does work everywhere where it's important.

[WOTC] Coloured PCS Icons

Notes: This is a simple little event listener that listens to a CHL event for changing the icon of PCS' in the 'card' slot and Ability Summary. This mod changes a few icons but mainly adds 'colour', see the screenshots.

[WotC] No Drop Down Lists With Controller Support

Notes: An update of LeaderEnemyBoss's mod with controller support added. Designed primarily for use with Long War of the Chosen; however, it should work with War of the Chosen as well.

[WOTC] No Drop Down Lists: Remove Traits

Notes: This is an extension of No Drop Down Lists for the WOTC Infirmary Remove Trait Slot!

Classes & Skills

Soldier classes, abilities, and skill trees: how your operatives grow and what they can do in a fight. These cards carry the heaviest mechanic impact - read each card's Impact field before enabling, and check Dependencies for class-framework requirements.

Ability Fixes

Avenger Defense Bondmates Fix

Notes: Fixes soldiers not having bondmate abilities if their partner spawned as reinforcements on Avenger Defense. Checks and fixes both bondmates at the point the second one is added to the map.

[WOTC] Reliable Ever Vigilant

Notes: ALL CREDITS FOR THIS MOD GO TO -bg-. I HAVE MERELY COMPILED AND FIXED THE MOD FOR WOTC.

[WOTC] Ability Interaction Fixes

Notes: This is a War of the Chosen mod. 'Ability Interaction Fixes' primarily fixes several 'Ability Interactions' which are in some way bugged.

[WotC] Scanning Protocol Fix

Notes: Scanning Protocol Fix fixes the highlighted effect of Scanning Protocol and Battlescanners still being applied even if you can see the enemy. Scanning Protocol will no longer fill the battlefield with ugly red blobs!

Class Mechanics

[WOTC] SPARK Repair Fix

Notes: 'Send the BIT to a damaged robotic ally and repair it. Advanced BITs can repair slightly more.' 'Upgrading your BIT will lead to more HP repaired.' 'The upgraded plated model improves the damage and healing capabilities of the BIT.'

[WOTC] More Psionic Units

Notes: This mod makes the following combatants count as Psionic units: The Assassin, The Hunter, The Warlock, Spectral Lancers, Spectral Zombies, Psi Zombies, Templars, Templar Ghosts, Templar Disciples - If you have Additional Mission Types Redux installed.

WotC: "Increase Combat Intelligence" for everyone

Notes: There are covert actions that allow you to improve combat intelligence for soldiers... except for hero classes, who ironically need them the most.

Enemies & Aliens

The opposition: alien behavior, roster, and threat level. Cards here change what you fight and how it fights back. Check each card's Impact field for difficulty and pacing changes, and Notes for any load-order requirements relative to class or gear mods.

Enemy Behavior Fixes

Tower Detection Fix [WOTC]

Notes: Scanning towers lose their detection radius when destroyed. WARNING: Will not work retroactively for mid-tactical saves.

Spectre Vanish Fix

Notes: Now Spectre reveals himself when shooting. On the XCOM2 wiki you can read that Spectre is being revealed when using any non-movement action. Which was not true, but with this mod it becomes a reality.

Turrets Are Cover [WOTC]

Notes: Turrets provide full cover, even when dead. Does not change any other stats and does not require Shen's Last Gift DLC. Note there is a bug in the base game that grants the cover bonus to targets standing next to the turret.

[WOTC] Surgical SitRep Fix

Notes: Fixes a bug with the 'Surgical' SitRep (The one where you can only bring 3 Soldiers). The SitRep is supposed to reduce podsizes to 2.

The Chosen

Chosen Dark Events Fix

Notes: Dark Events related to the Chosen will no longer fire if you killed them all. The Loyalty Among Thieves events already do this, this is just me finishing it up. Due to how Dark Events work, this will most likely require a new campaign to take effect.

[WOTC] End of Mission Quotes Fix

Notes: When you finish a mission, the Chosen encounter screen is supposed to display a quote by the Chosen. However, only the Assassin has text for this, so when you defeat the Warlock/Hunter no quote is given.

Enemy Equipment

[WOTC] Purifier Grenades Fix

Notes: I have released a newer version of this mod: Incendiary Grenade Damage Fix. Looks like the guys at Firaxis were too lazy to create a new grenade for the Advent Purifier so they decided to nerf our own grenades instead. This mod rectifies that.

Weapons & Gear

Items, equipment, and loadout options: new weapons, armor, and utilities for the squad. Check each card's Impact field for balance changes, and Notes for where the new gear appears (proving ground, engineering, loot, or starting kit).

Weapon & Upgrade Fixes

[WotC] Weapon Fixes

Notes: This mod fixes a few issues with weapons and their upgrades, especially if you use mods which allow upgrades for (auto)pistols. (eg Primary Secondaries, Pistol Overhaul, Autopistol Overhaul)

Remove Weapon Upgrades

Notes: Allow you to remove weapon upgrades and PCS instead of just replacing them when you are allowed to reuse them (such as Interchangeable Upgrades breakthrough), so you don't need all the placeholder upgrades/PCS to move your weapon upgrades/PCS around.

Improved Rocket Targeting

Notes: Improves Rocket Launcher Targeting in conjunction with recent changes done by the X2WotCCCommunityHighlander (although it's not a requirement).

Armor Fixes

[WOTC] R.A.G.E. Armor Tech Fix

Notes: A simple fix to a minor bug: R.A.G.E. Armor Tech category is set to Plated when it should be Powered. This mod simply changes it to Powered. This is useful if you have mods that add/alter effects based on the Armor Tech category.

More Effective Blast Padding

Notes: Makes explosions from cars and other destructible objects (think gas tanks) be affected by blast padding. Should work in any situation except when loading into a tactical mission (you will need to complete the mission before it'll take effect).

Cosmetics & Visuals

Appearance: soldier cosmetics, environment visuals, and effects. These cards change how the game **looks**, not how it plays - unless a card's Impact explicitly says otherwise.

Soldier Appearance

WOTC - Configurable Headshots

Notes: This small mod generates visually more pleasing soldier portrait photos. For some strange reason Firaxis tinkered with the way soldier portrait photos ('headshots') are shot in WOTC.

[WOTC] Visible Utility Items by Iridar

Notes: This small and purely visual mod will make grenades and other utility items visible at all times in the Armory, and, with some caveats, in Tactical.

Effects & Presentation

Post Process Status Effects

Notes: Adds post-process visual effects for when a soldier is affected by Fire, Acid, Poison or Disorientation so you immediately notice that.

[WOTC] Cinematic Rapid Fire (and other abilities)

Notes: Gives Rapid Fire, and it's ugly sister Chain Shot, their cinematic camera back! Also, with WotC, shows the reaper Banish ability the love too.

SQUID BE GONE!

Notes: There is a mystery bug around for a very long time. Its hilarious, its scary, it comes and it goes and there was no cure to be found!

Audio & Sound

Music, voice, and sound design: the audio layer of the campaign. Pure presentation unless a card's Impact says otherwise.

Quieter Warlock Skills

Notes: Gives the warlock adjusted animations that use quieter sectoid noises instead of the eardrum-destroying garbage he usually does. Impacts mind scorch, summon zombies, mind control.
