13 - Weapons

14 - Apartments & Housing

15 - Vehicles & Transport

16 - Locations & World Expansion

17 - Visuals & Atmosphere

18 - Audio & Music

01 - MO2 Setup & Tools

Goal: Everything needed to get Mod Organizer 2 running with Cyberpunk 2077. Prerequisites, installation, profile setup, launch workflow, and essential tooling.

Mod Organizer 2

- **Nexus:** <https://www.nexusmods.com/skyrimspecialedition/mods/6194>
- **Version:** 2.5.2
- **Released:** 2026-03-27
- **Summary:** Mod management with virtual file system -- keeps game directory clean
- **Why:** Foundation of the entire modlist. Virtualized installs prevent conflicts and make mod removal/updating safe.
- **Conflicts:** None
- **Dependencies:** None
- **MO2 Notes:**
 - Install MO2 to a location OUTSIDE Program Files (e.g. `C:\Modding\MO2`)
 - Use the Cyberpunk 2077 game plugin (built-in since MO2 2.5)
 - Portables mode only (default) -- not Instance mode
 - After install: launch MO2, it should auto-detect Cyberpunk 2077
- **Performance:** None

Root Builder (MO2 Plugin)

- **Nexus:** <https://www.nexusmods.com/skyrimspecialedition/mods/31720>
- **Version:** 0.9.4.0
- **Released:** 2025-06-25
- **Summary:** Allows MO2 to manage files in the game root directory via VFS
- **Why:** Cyberpunk 2077 mods (CET, RED4ext, etc.) install DLLs and files into the game root (`bin/x64/` , `red4ext/` , etc.). Root Builder lets MO2 virtualize these instead of directly modifying the game folder.
- **Conflicts:** None
- **Dependencies:** Mod Organizer 2
- **MO2 Notes:**
 - Download the Root Builder plugin from Nexus
 - Extract to `<MO2-install-dir>/plugins/`

- In MO2: Tools -> Settings -> Workarounds tab
- Check "Enable Root Builder"
- Set "Root" category for mods that install to game root
- **Performance:** None

MO2 Quick-Start Workflow

1. Install MO2 (portable) + Root Builder plugin
2. Launch MO2 -- it auto-detects Cyberpunk 2077
3. Go to Tools -> Settings -> Workarounds -> enable Root Builder
4. Create a profile (e.g., "Modlist Playthrough")
5. Download mods via "Download with Manager" on Nexus
6. Install mods from Downloads tab
7. Right-click installed mods -> "Change Category" to assign Root category when needed
8. Set executables: `CET.exe` , `REDprelauncher.exe` , `Cyberpunk2077.exe`
9. Always launch the game through MO2

Separator Reference

MO2 supports colored separators in the left mod list pane. Create each separator by right-clicking in the left pane → **Create Separator**, naming it as shown below, then right-click → **Set Colour** and entering the hex code.

Main separators use bold, saturated colors. Sub-category separators use lighter gradient shades of the parent category's color.

How To Apply Colors

1. Right-click the separator → Select Colour
2. Click "Pick Custom Colour"
3. Enter the hex code (e.g. `#E8B830`)
4. Click OK

Separator Palette

#	Separator Name	Hex (Main)	Sub-Category	Hex (Gradient)
01	01 — MO2 Setup & Tools	<code>#9E9E9E</code>	—	—
02	02 — Core Utilities	<code>#1565C0</code>	—	—

#	Separator Name	Hex (Main)	Sub-Category	Hex (Gradient)

			► Custom Radio	#F06292
			► Ambient & SFX	#E91E63
19	19 — Performance & Optimization	#424242	—	—

Quick Setup

For a faster setup, a `separators.txt` file is included in the repo. Create separators manually via right-click → Create Separator, naming each one, then set colors from the table above.

Mods are added below as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

02 - Core Utilities

Goal: Script extenders, frameworks, and essential libraries that other mods depend on. Install these first -- nothing else works without them.

RED4ext

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2380>
- **Version:** 1.30.0
- **Released:** 2026-03-09
- **Summary:** Native plugin loader for REDengine 4. The foundation layer every native-code mod depends on.
- **Why:** Required by ArchiveXL, TweakXL, Codeware, Input Loader, and most serious gameplay/UI mods. Without RED4ext, native plugin mods cannot load.
- **Conflicts:** None
- **Dependencies:** Visual C++ Redistributable 2022
- **MO2 Notes:**
 - Extract archive to game root.
 - Tag mod as **Root** category in MO2 (it installs to `bin/x64/` and `red4ext/`).
 - Verify: check `<GameDir>/red4ext/logs/red4ext.log` for successful load.
- **Performance:** None

Cyber Engine Tweaks

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/107>
- **Version:** 1.37.1
- **Released:** 2025-09-30
- **Summary:** Scripting framework with in-game console, Lua modding API, and quality-of-life fixes.
- **Why:** Foundation for Lua-based mods (appearance, UI, gameplay tweaks). Provides the dev console, ImGui rendering, and Lua scripting runtime.
- **Conflicts:** None
- **Dependencies:** Visual C++ Redistributable
- **MO2 Notes:**
 - Extract archive to game root.
 - Tag mod as **Root** category.
 - Add `CET.exe` as an executable in MO2 -- launch the game through CET.
 - Launches `Cyberpunk2077.exe` automatically; injects its overlay.

- **Performance:** None

redscript

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/1511>
- **Version:** 0.5.31
- **Released:** 2025-06-01
- **Summary:** Compiler and loader for redscript (`.reds`) files -- the native scripting language of REDengine 4.
- **Why:** Many gameplay, quest, and UI mods ship `.reds` scripts. redscript compiles them on load. Without it, those mods do nothing.
- **Conflicts:** None
- **Dependencies:** None (standalone)
- **MO2 Notes:**
 - Extract archive to game root.
 - Tag mod as **Root** category.
 - Compiled scripts appear in `r6/cache/redscript/`.
- **Performance:** None

ArchiveXL

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4198>
- **Version:** 1.26.8
- **Released:** 2026-05-20
- **Summary:** Archive expansion framework -- adds .archive loading, dynamic appearances, character customization system, and custom resource support.
- **Why:** Required by clothing, appearance, weapon, and housing mods. Enables custom meshes, textures, animations, and world-streaming blocks.
- **Conflicts:** None
- **Dependencies:** RED4ext 1.29.0+, redscript 0.5.31+
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Install this BEFORE TweakXL and any clothing/appearance mods.
 - No FOMOD -- simple extraction.
- **Performance:** None

TweakXL

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4197>
- **Version:** 1.11.3

- **Released:** 2025-12-20
- **Summary:** TweakDB modification framework -- edit game stats, items, recipes, and balance via YAML files.
- **Why:** Required by virtually every gameplay overhaul, rebalance, and item/weapon/clothing mod. Without it, mods can't modify game data.
- **Conflicts:** None
- **Dependencies:** RED4ext 1.29.0+
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Install after ArchiveXL.
 - TweakDB overrides load from `r6/tweaks/`.
- **Performance:** None

Codeware

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7780>
- **Version:** 1.20.3
- **Released:** 2026-04-11
- **Summary:** UI scripting runtime -- extends RED4ext with native UI programming support (ink widgets, controllers, custom HUD elements).
- **Why:** Required by mods that add custom UI screens, HUD elements, inventory panels, or in-game configuration menus.
- **Conflicts:** None
- **Dependencies:** RED4ext 1.29.0+, redscript 0.5.31+, CET 1.37.0+
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Install after ArchiveXL and TweakXL.
- **Performance:** None

Input Loader

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4575>
- **Version:** 0.2.3
- **Released:** 2025-07-19
- **Summary:** Merges custom input XML files with the game's input config at load time.
- **Why:** Required by mods that add custom keybinds (vehicle mods, photo mode tools, gameplay actions). Without it, custom inputs conflict or don't load.
- **Conflicts:** None
- **Dependencies:** RED4ext

- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Custom input files go in `r6/input/`.
 - Merged output written to `r6/cache/`.
- **Performance:** None

Native Interactions Framework

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21422>
- **Version:** 1.05b
- **Released:** 2026-01-16
- **Summary:** Framework for placing 21 interaction types (sitting, sleeping, drinking, showering, dancing, etc.) in the game world via in-game UI. Required by Lucy Apartment Remastered and Night City Hangouts series.
- **Why:** Framework-tier mod enabling placed world interactions. Same role as ArchiveXL/Codeware — other mods build on it to add immersive seating, leaning, smoking, and other environmental interactions.
- **Conflicts:** None known. Framework-only — no user-facing features by itself.
- **Dependencies:** ArchiveXL, Codeware, CET, RED4ext, redscript, Phantom Liberty
- **MO2 Notes:** Extract to game root. Tag as **Root**. Install after Codeware, before Native Settings UI. No configuration — other mods use this framework to place interactions.
- **Performance:** None

Native Settings UI

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/3518>
- **Version:** 1.2.0
- **Released:** 2024-01-06
- **Summary:** In-game settings menu for CET-based mods.
- **Why:** Provides a unified settings panel for mods that expose configurable options. Cleaner than editing config files manually.
- **Conflicts:** None
- **Dependencies:** CET
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Settings appear under CET's overlay (default Insert key).
- **Performance:** None

Browser Extension

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10038>
- **Version:** 0.9.7
- **Released:** 2025-09-20
- **Summary:** Framework for adding custom web sites to the in-game browser homepage. Gathers and shows all vanilla journal-defined sites.
- **Why:** Enables economy mods like Much Better Eddies with its Dead Channel black-market fixer line. Provides the in-game browser infrastructure that other mods depend on.
- **Conflicts:** None known
- **Dependencies:** redscript, RED4ext, Codeware. Optional: Mod Settings.
- **MO2 Notes:** Extract to game root. Tag as **Root**. Custom sites can be added by creating a child of BrowserEventsListener (see CustomSiteExample in optional files).
- **Performance:** None

Redscript Configuration Framework

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/30726>
- **Version:** Verify
- **Released:** 2026-07-07
- **Summary:** Modern popup-based configuration framework for redscript mods. Replaces legacy Mod Settings for newer mods, offering a clean in-game configuration UI.
- **Why:** Required by Calendar, 1st Night City Bank, and other modern mods that have migrated from Mod Settings. Provides a more maintainable configuration system.
- **Conflicts:** None. Coexists with Mod Settings for legacy mod support.
- **Dependencies:** Codeware, redscript
- **MO2 Notes:** Extract to game root. Tag as **Root**. Install after Mod Settings (Native Settings UI). Newer mods use this; older mods still use Mod Settings.
- **Performance:** None

Calendar

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/30331>
- **Version:** 3.5.0
- **Released:** 2026-06-07
- **Summary:** In-game calendar tracking from The Rescue quest anchor point. Handles quest-driven time skips and provides a scheduled-event API for mod integrations like banking and rent systems.
- **Why:** Foundation framework for time-aware mods. Without a reliable calendar, loan due dates, rent cycles, and scheduled events cannot function correctly. Consumed by 1st Night City Bank and other DigitalVixen-suite mods.
- **Conflicts:** None

- **Dependencies:** Codeware, redscript, Redscript Configuration Framework. Pre-v3.5.0 required DigitalVixen Core (no longer needed).
- **MO2 Notes:** Extract to game root. Tag as **Root**. Install after Redscript Configuration Framework. Configure via Mod Settings -> Calendar (post-heist coma days, poll interval). Date listener API available for mod integrations.
- **Performance:** None

Install Order

1. Visual C++ Redistributable 2022 (system prerequisite)
2. RED4ext
3. Cyber Engine Tweaks
4. redscript
5. ArchiveXL
6. TweakXL
7. Codeware
8. Input Loader
9. Native Interactions Framework
10. Native Settings UI
11. Redscript Configuration Framework
12. Calendar

All of these are **Root-category** mods -- enable Root Builder in MO2 before installing.

03 - Bug Fixes

Goal: Fix bugs CDPR hasn't addressed. Quest fixes, animation fixes, world holes, scripting errors, and general polish. No gameplay changes -- only fixes.

Always First Equip

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2557>
- **Version:** 1.11.0
- **Released:** 2025-06-15
- **Summary:** Repeats the first-equip animation each time you draw a weapon or press a hotkey. Fixes the bug where weapons appear invisible on the first draw after loading a save.
- **Why:** Vanilla bug -- after loading a save, the equip animation doesn't play, making weapons appear invisible or floating. This mod restores the animation and adds weapon inspection (IdleBreak, SafeAction).
- **Conflicts:** None
- **Dependencies:** Native Settings UI
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Configure via Native Settings UI in CET overlay (default Insert key).
 - Highly configurable -- set trigger delay, hotkeys, and which animations to use.
- **Performance:** None

Quest Trigger Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/17980>
- **Version:** 1.5.0
- **Released:** 2025-10-15
- **Summary:** Fixes quest triggers that are still broken in v2.31 -- missions that fail to start, NPCs that don't appear, and blocked progression.
- **Why:** Even after CDPR's patches, some quest triggers remain broken. This mod addresses the most commonly reported stuck quests.
- **Conflicts:** Check mod page for compatibility version vs all-in-one
- **Dependencies:** redscript
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Choose between "Compatibility" version (for heavily-modded setups) and "All-In-One" version (full coverage, fewer conflicts).

- Recommended: use the Compatibility version for this modlist.
- **Performance:** None

Deceptious Bug Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/18318>
- **Version:** 2.2.0
- **Released:** 2024-12-09
- **Summary:** Collection of non-subjective bug fixes merged into a single archive. Covers multiple areas (quests, world, items, UI, vehicles).
- **Why:** Consolidates many small bug-fix mods into one maintained package. Fixes issues that individual modders have identified and patched.
- **Conflicts:** May conflict with other mods that touch the same scripts
- **Dependencies:** redscript, RED4ext
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Install AFTER Quest Trigger Fixes to avoid script overlap.
 - Read included documentation for full list of fixes.
- **Performance:** None

Semimaru Quest Restart Bug Fix

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23031>
- **Version:** 1.1
- **Released:** 2025-09-12
- **Summary:** Fixes missing HUD notification and journal objective updates for River's Semimaru quest. v2.31 fixed the trigger but not the feedback loop.
- **Why:** After missing the Semimaru, River's text message arrives but the HUD notification and journal objective don't update, leaving the quest stalled on "Wait for River" despite progress being possible.
- **Conflicts:** Compatible with Quest Trigger Fixes (covers different aspects)
- **Dependencies:** ArchiveXL, RED4ext
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Works retroactively — no need to reload a save from before the quest.
- **Performance:** None

Eddies Notification Fix

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/16420>

- **Version:** 1.01
- **Released:** 2024-08-29
- **Summary:** Restores the HUD eddies notification when selling/buying at vendors and drop points. v2.12a broke these notifications.
- **Why:** Vanilla bug — after v2.12a, the "+X eddies" notification stopped appearing for vendor transactions, making it impossible to see sale earnings without checking the inventory screen.
- **Conflicts:** None known
- **Dependencies:** redscript
- **MO2 Notes:** Extract `EddiesNotificationFix.reds` to `Cyberpunk 2077/r6/scripts/`. Tag as **Root**.
- **Performance:** None

Epistrophy Delamain Despawn Fix

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/29851>
- **Version:** 1.2
- **Released:** 2026-05-23
- **Summary:** Fixes Delamain cabs despawning during the Epistrophy questline, preventing softlocks and progression blockers.
- **Why:** Epistrophy cab encounters can despawn mid-mission, forcing reloads or blocking completion entirely. This ensures each cab stays active until resolved.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL 1.26.2+, RED4ext 1.30.0+
- **MO2 Notes:**
 - Extract `EpistrophyDelamainDespawnFix.archive` to `Cyberpunk 2077/archive/pc/mod/`. Tag as **Root**.
 - IMPORTANT: Must be installed BEFORE completing Epistrophy — does not apply retroactively.
- **Performance:** None

NCPD Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/22838>
- **Version:** ncpdf-1.5
- **Released:** 2025-07-20
- **Summary:** Prevention system bug fixes for NCPD, Netwatch, MaxTac — fixes kill-not-wanted bugs, icon desync, duplicate names, and missing archetypes.
- **Why:** Police system has subtle bugs — you could kill officers execution-style without becoming wanted, icons appeared with no police present, and MaxTac Melissa Rory's name was misspelled. These undermine the wanted system's integrity.

- **Conflicts:** None known. Not needed if Cop Killer (14652) is installed.
- **Dependencies:** Codeware, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**.
- **Performance:** None

Item Records Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25019>
- **Version:** 1.0
- **Released:** 2025-10-14
- **Summary:** Fixes incorrect or missing data in item records — preset iconic parts, missing weapon tags (HeavyWeapon, VehicleWeapon), and silencer tag oversight by CDPR.
- **Why:** Item records have data errors that affect other mods' ability to reference them correctly. Fixing these at the foundational level provides stability for any mod that queries item tags or iconic presets.
- **Conflicts:** None known — loads early so other mods can overwrite
- **Dependencies:** redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Loads automatically before other TweakXL mods.
- **Performance:** None

HUD Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4011>
- **Version:** 1.15.0
- **Released:** 2026-04-11
- **Summary:** Patches disappearing HUD elements, quest dialogs, missing health bar, speedometer bugs, and Kiroshi scanner lockups introduced in v1.5–2.x.
- **Why:** The game has persistent HUD bugs where health bars, minimaps, quest dialogues, and speedometers disappear or behave incorrectly. Save-reload isn't always possible mid-combat or during locked quest phases.
- **Conflicts:** Auto-disables Health Bar/Weapon Roster fixes if Limited HUD is installed
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Configure via CET overlay or mod window. Set hotkey for manual HUD restore.
 - "HUD Features Autohide" ON by default (v1.6+ design).
- **Performance:** None

H10 Interactive Stash Door Restored

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/18482>
- **Version:** 1.1
- **Released:** 2025-05-30
- **Summary:** Re-enables the HUD prompt for the H10 Megabuilding stash door, making it easier to access the stash room without aiming at the tiny intercom.
- **Why:** The H10 stash room intercom is notoriously finicky to trigger, and closing the door via intercom could softlock you inside (no Open prompt appears again). This restores intuitive door interaction.
- **Conflicts:** None known — hooks via ArchiveXL without editing vanilla files
- **Dependencies:** ArchiveXL 1.24.0+, RED4ext 1.28.0+
- **MO2 Notes:**
 - Extract archive and xl file to `Cyberpunk 2077/archive/pc/mod/` . Tag as **Root**.
 - Effective upon leaving and returning to the apartment after install.
- **Performance:** None

Immersion Patch -- Story Quest Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/29152>
- **Version:** 1.2.0
- **Released:** 2026-04-25
- **Summary:** Fixes animation and scripting bugs in main story quests (The Heist, The Information, Automatic Love, etc.).
- **Why:** Story moments with broken animations or scripting break immersion. This restores intended behavior in critical narrative scenes.
- **Conflicts:** None known
- **Dependencies:** redscript
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Complements Quest Trigger Fixes -- covers different issues.
- **Performance:** None

Immersion Patch -- Minor Activities Quest Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27162>
- **Version:** 1.1.0
- **Released:** 2026-07-04
- **Summary:** Fixes immersion-breaking bugs in Cyberpsycho sightings and NCPD scanner quests (Minor Activities).
- **Why:** Side content with broken triggers or NPC behavior undermines the living-world feel. This restores intended behavior.

- **Conflicts:** None known
- **Dependencies:** redscript
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Install after the Story Quest Fixes version.
- **Performance:** None

No More Limp Bollards (And Road Barriers)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26568>
- **Version:** 1.0
- **Released:** 2025-12-30
- **Summary:** Modifies physics properties of roadside objects so bollards, railings, and barriers bolted to the ground no longer flop around like limp noodles. Temporary objects (construction fences, riot barricades) are left untouched.
- **Why:** Persistent visual bug where fixed-in-place roadside objects have ragdoll physics, creating a junky, immersion-breaking look throughout Night City.
- **Conflicts:** None known
- **Dependencies:** None
- **MO2 Notes:** Extract to game root. Tag as **Root**. Simple archive install — no configuration needed.
- **Performance:** None

Streaming Bug Workaround

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/22857>
- **Version:** 0.1
- **Released:** 2025-07-22
- **Summary:** Workaround for the game's streaming bug where assets fail to load, causing invisible walls, missing geometry, and pop-in issues.
- **Why:** The streaming bug is a well-known engine-level issue affecting heavily-modded setups. This CET-based workaround forces asset reloading, preventing game-breaking invisible collisions and missing world geometry. Essential for larger modlists.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to CET plugins folder. Run the console command provided on the mod page when streaming issues occur. Tag as **Root**.
- **Performance:** None

Install Order

1. Always First Equip
2. Quest Trigger Fixes (Compatibility version)
3. Deceptious Bug Fixes
4. Semimaru Quest Restart Bug Fix
5. Eddies Notification Fix
6. Epistrophy Delamain Despawn Fix
7. NCPD Fixes
8. Item Records Fixes
9. HUD Fixes
10. H10 Interactive Stash Door Restored
11. Immersion Patch -- Story Quest Fixes
12. Immersion Patch -- Minor Activities Quest Fixes
13. No More Limp Bollards (And Road Barriers)
14. Streaming Bug Workaround

All are **Root**-category mods -- enable Root Builder in MO2 before installing.

04 - UI & HUD

Goal: Interface improvements. Menus, minimap, notifications, inventory screens, dialogue interface, and anything the player interacts with on screen. Clean, informative, immersive.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Immersive First Person

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2675>
 - **Version:** 1.5.1
 - **Released:** 2025-12-06
 - **Summary:** Improved body presence (visible torso) and free look camera for first-person view.
 - **Why:** Makes the first-person view more immersive by clearly showing the player's body when looking down, and adds head-turning (free look) without rotating the body.
 - **Conflicts:** None known
 - **Dependencies:** Cyber Engine Tweaks
 - **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Configure toggle hotkey via CET overlay -> Bindings -> **Hotkeys** and **Inputs** menus.
 - Free look shortcut defaults to "B".
 - Multi-language support available via separate translation mods on Nexus.
 - **Performance:** None
-

Limited HUD

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2592>
- **Version:** 2.22.3
- **Released:** 2026-05-30
- **Summary:** Hides main HUD widgets by default and shows them only on configurable events (combat, stealth, weapon unsheathed, etc.).
- **Why:** Core immersion mod — gives full control over HUD clutter. Widgets appear only when contextually relevant, keeping the screen clean during exploration and dialogue.
- **Conflicts:** None known. Compatible with Better Loot Markers and Improved Minimap Zoom with optional patches.

- **Dependencies:** redscript 0.5.31+. Optional: ArchiveXL, Input Loader, Mod Settings, RED4ext.
- **MO2 Notes:** Extract to game root. Configure visibility conditions per-widget via Mod Settings menu or `r6/scripts/LimitedHUD/Config.reds` . Hotkeys: F6 (minimap toggle), F8 (global toggle).
- **Performance:** None

Better Loot Markers

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/3486>
- **Version:** 1.4.0
- **Released:** 2026-04-15
- **Summary:** Replaces default loot markers with detailed icons showing item categories (weapons, armor, eddies, crafting mats, etc.) with tier colors and count badges.
- **Why:** Makes loot evaluation faster and more informative at a glance. Includes immersive "scanner only" mode to keep HUD clean.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks 1.32.0+
- **MO2 Notes:** Extract to `Cyberpunk 2077/bin/x64/plugins/cyber_engine_tweaks/mods/` . Configure via CET overlay -> Better Loot Markers. Supports vertical/horizontal layout, scaling, and scanner-only mode.
- **Performance:** None

Clear Skill Checks

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2805>
- **Version:** 1.1.1
- **Released:** 2025-11-29
- **Summary:** Shows the required attribute level for conversation skill checks you pass (vanilla only shows your current level).
- **Why:** Removes ambiguity from dialogue checks — lets you know how close you are to thresholds and whether further investment is worthwhile.
- **Conflicts:** None known
- **Dependencies:** redscript
- **MO2 Notes:** Extract to game root. Files go to `Cyberpunk 2077/r6/scripts/` .
- **Performance:** None

Real Vendor Names

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4941>

- **Version:** 2.1.0
- **Released:** 2023-12-06
- **Summary:** Displays actual vendor names on world map icons instead of generic type labels (e.g., "Jinguji" instead of "Clothing Store").
- **Why:** Small immersion detail that makes Night City's shops feel like real places rather than menu entries.
- **Conflicts:** None known
- **Dependencies:** redscript
- **MO2 Notes:** Extract to game root. Files go to `Cyberpunk 2077/r6/scripts/`.
- **Performance:** None

Immersive Timeskip

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/5115>
- **Version:** 2.2.2
- **Released:** 2026-01-08
- **Summary:** Replaces the static timeskip screen with an overlay that shows the world moving around you while time passes, activated by hotkey.
- **Why:** Breaks immersion less than the vanilla black-screen timeskip. Lets you see the city change as hours pass.
- **Conflicts:** None known
- **Dependencies:** Input Loader, RED4ext, redscript
- **MO2 Notes:** Extract to game root. Default hotkey is O (keyboard) / Right Pad (controller). Configurable via Mod Settings. Can also replace the default timeskip menu (enable in `r6/scripts/ImmersiveTimeskip/Config.reds`).
- **Performance:** None

Stash Filters

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/5298>
- **Version:** 2.1.3
- **Released:** 2026-03-22
- **Summary:** Adds category filter buttons to the stash item list for easier navigation.
- **Why:** Essential QoL for managing a large collection. Vanilla stash has no filtering, making it tedious to find specific items.
- **Conflicts:** None known
- **Dependencies:** Codeware, RED4ext, redscript
- **MO2 Notes:** Extract to game root. Files go to `Cyberpunk 2077/r6/scripts/`.
- **Performance:** None

No Camera Auto Centering

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2169>
- **Version:** 0.9
- **Released:** 2023-11-14
- **Summary:** Disables the vehicle camera auto-centering that resets your look direction after ~2 seconds of no input.
- **Why:** Subtle but meaningful driving improvement. Lets you freely look around while driving without fighting the camera snap-back.
- **Conflicts:** None known
- **Dependencies:** RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. FPP module included. For TPP, use in-game Camera Auto Reset Time slider (max 10s, can be increased via `r6/config/settings/options.json`).
- **Performance:** None

Better Armor Tooltip

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/9706>
- **Version:** 1.0.1
- **Released:** 2025-12-28
- **Summary:** Fixes the armor tooltip in the Cyberware/Ripperdoc menu to show your actual current damage reduction rather than a theoretical maximum.
- **Why:** Vanilla armor tooltip is misleading — it shows a theoretical maximum "X% or more" rather than your actual damage reduction. This provides accurate, actionable data for gearing decisions.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, RED4ext, redscript
- **MO2 Notes:** Extract to game root. Files go to `r6/scripts/`. Works automatically — no configuration needed.
- **Performance:** None

Flavorfull Descriptions

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/13575>
- **Version:** 1.0
- **Released:** 2024-03-11
- **Summary:** Restores lore/flavor texts on cyberware, healing items, and grenades that were removed in the 2.0 update.
- **Why:** 2.0 stripped immersive item descriptions that added character and world-building to gear. Restoring them makes reading item tooltips feel like part of Night City's atmosphere

rather than dry stat sheets.

- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to `Cyberpunk 2077/bin/x64/plugins/cyber_engine_tweaks/mods/` . Note: cyberdeck descriptions and some oversized tooltips may still have display issues.
- **Performance:** None

Improved Minimap Zoom

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2959>
- **Version:** 2.0.2
- **Released:** 2025-08-06
- **Summary:** Exposes minimap zoom configuration to the Mod Settings menu, allowing fine-tuned zoom levels.
- **Why:** Patch 2.0 added dynamic zoom, but this gives manual control over min/max zoom values for players who want consistent visibility.
- **Conflicts:** None known
- **Dependencies:** Mod Settings, RED4ext, redscript
- **MO2 Notes:** Extract to game root. Configure via Mod Settings -> Improved Minimap Zoom.
- **Performance:** None

Crafting Recipe Owned and Iconic Labels

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/11261>
- **Version:** 1.1.1
- **Released:** 2025-12-02
- **Summary:** Adds check marks to recipe icons for items you already own, plus iconic background borders for iconic recipes in the crafting menu.
- **Why:** Vanilla crafting has no way to tell if you already own a craftable item without cross-referencing your inventory. This eliminates wasted materials on duplicates and makes iconic recipes visually distinct.
- **Conflicts:** None known
- **Dependencies:** redscript
- **MO2 Notes:** Extract to game root. Files go to `r6/scripts/` . Works automatically.
- **Performance:** None

Loot Quantity Text

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23942>
- **Version:** 1.1

- **Released:** 2025-09-19
- **Summary:** Removes the vanilla 9999+ limit on loot quantity display in the loot widget, showing the actual value instead.
- **Why:** Vanilla caps loot quantity display at 9999 with a placeholder "9999+", hiding whether a body has 10,042 or 25,378 eddies. Affects money and stackable items, removing useful information for no good reason.
- **Conflicts:** Compatible with Crafting Component Quantity Text and Numerals Get Commas
- **Dependencies:** redscript
- **MO2 Notes:** Extract `z_LootQuantityText.reds` to `Cyberpunk 2077/r6/scripts/`. Tag as **Root**.
- **Performance:** None

Ultimate Kill Counter

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/9372>
- **Version:** 1.17
- **Released:** 2025-09-12
- **Summary:** Adds a detailed kill tracking tab to the Stats screen — tracks Killed, Finished, Defeated, Incapacitated, and downed-by-type (melee, ranged, quickhacks, stealth takedowns, etc.).
- **Why:** Vanilla kill counters are buggy and incomplete. Accurate kill tracking rewards different playstyles and provides meaningful feedback on combat approach. Non-lethal options are properly distinguished from lethal ones.
- **Conflicts:** Compatible with Stealrunner (different scope)
- **Dependencies:** ArchiveXL, RED4ext, redscript
- **MO2 Notes:**
 - Extract `DumpPromptFix.archive` to `Cyberpunk 2077/archive/pc/mod/`.
 - Extract `UltimateKillCounter.reds` to `Cyberpunk 2077/r6/scripts/`.
 - Tag as **Root**. Recommended for new playthroughs (existing saves show pre-mod vanilla figures).
- **Performance:** None

Finished Quests Sorted

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/16009>
- **Version:** 1.01
- **Released:** 2024-12-12
- **Summary:** Fixes the sorting of Finished quests in the Journal so they appear in the order you completed them, not the order their entries were created.
- **Why:** v2.0's quest sorting uses entry-creation timestamps for the Finished filter instead of completion timestamps, making the quest log look random. This restores proper

chronological order.

- **Conflicts:** None known
- **Dependencies:** redscript
- **MO2 Notes:** Extract `FinishedQuestsSorted.reds` to `Cyberpunk 2077/r6/scripts/`. Tag as **Root**.
- **Performance:** None

Loot Icons Extension

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/16386>
- **Version:** 1.53
- **Released:** 2025-09-10
- **Summary:** Expands loot icons with 60+ vanilla icon variants, wall/scan visibility options, tinting by quality, icon sorting, and full Mod Settings customization.
- **Why:** Vanilla loot icons use generic magazine icons for all ammo types and lack variety. This makes loot evaluation faster with distinct icons per item type, plus color tinting by quality for quick rarity assessment.
- **Conflicts:** Incompatible with Better Loot Markers (self-disables if both installed)
- **Dependencies:** ArchiveXL, Codeware, redscript 0.5.31+, TweakXL. Recommended: Mod Settings.
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Configure via Mod Settings for icon scale, layout, tinting, and visibility.
 - Optional "LIExt Light" version available without DLL files.
- **Performance:** Light (icon rendering only on loot open)

RAM bar fix

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/22503>
- **Version:** 1.2
- **Released:** 2025-09-20
- **Summary:** Prevents the health bar from shifting right when you have many RAM cells. Shrinks cells to fit and adds a filled/max RAM counter.
- **Why:** With high RAM counts, the health bar moves to the right, breaking HUD alignment. This fixes the layout and adds a useful RAM usage counter.
- **Conflicts:** Not compatible with Informative HUD Quickhacks Memory Counter (counter would shrink with RAM cells)
- **Dependencies:** RED4ext, redscript. Optional: Mod Settings (for counter size/position).
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.

- Optional file without RAM counter available (works with Streamlined Health Bar).
 - Counter color changes based on RAM fill level.
 - **Performance:** None
-

Crouch Vignette Effect Remover

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/535>
 - **Version:** Verify
 - **Released:** 2020-12-25
 - **Summary:** Removes the dark vignette effect that appears when crouching.
 - **Why:** The crouch vignette is disorienting and reduces visibility during stealth gameplay. Removing it is a pure QoL improvement that doesn't affect game balance.
 - **Conflicts:** None known
 - **Dependencies:** None (standalone file replacement)
 - **MO2 Notes:** Extract to game root. Simple .reds script -- no dependencies. Tag as **Root**.
 - **Performance:** None
-

Conflict Begone - Archive Conflict Checker

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21912>
 - **Version:** Verify
 - **Released:** 2025-04-30
 - **Summary:** Scans installed archives and detects file conflicts between mods, with exportable reports and user-mod support.
 - **Why:** Essential diagnostic tool for large modlists. Quickly identifies which mods are overwriting each other's files, making conflict resolution manageable. No runtime impact -- runs on demand.
 - **Conflicts:** None known
 - **Dependencies:** None (standalone utility)
 - **MO2 Notes:** Run as needed from the game directory. Generates conflict reports for manual resolution. Not a runtime mod -- use for diagnosis only. Tag as **Utility**.
 - **Performance:** None (on-demand tool, no runtime impact)
-

Ripperdoc Vendor UI Enhancements

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23180>
- **Version:** 1.04

- **Released:** 2025-08-04
- **Summary:** Highlights cyberware category labels in the ripperdoc UI when items are on sale. Map tooltip integration showing each ripperdoc's cyberware specializations. Fully translated to all languages.
- **Why:** With Specialized Ripperdocs installed, knowing which vendor sells what becomes essential for planning cyberware purchases. This eliminates guesswork and makes the ripperdoc specialization system usable without referencing external tables.
- **Conflicts:** None known. Compatible with Ripperdoc Cyberware Specializations and Specialized Ripperdocs.
- **Dependencies:** Codeware, redscript. Optional: Mod Settings for in-game configuration. Integrates with Specialized Ripperdocs (#23399) and Ripperdoc Cyberware Specializations (#17110) if detected.
- **MO2 Notes:** Extract to game root. Tag as **Root**. Single `.reds` file install. For MO2 users with RCS: see pinned comment for compatibility steps if enhanced tooltips don't appear.
- **Performance:** None

Install Order

All **Root**-category mods -- enable Root Builder in MO2 before installing.

1. Crouch Vignette Effect Remover
2. Immersive First Person
3. Limited HUD
4. Better Loot Markers
5. Clear Skill Checks
6. Real Vendor Names
7. Immersive Timeskip
8. Stash Filters
9. No Camera Auto Centering
10. Better Armor Tooltip
11. Flavorfull Descriptions
12. Improved Minimap Zoom
13. Crafting Recipe Owned and Iconic Labels
14. Loot Quantity Text
15. Ultimate Kill Counter
16. Finished Quests Sorted
17. Loot Icons Extension
18. RAM bar fix
19. Ripperdoc Vendor UI Enhancements

Conflict Begone is a **Utility**-category standalone diagnostic tool -- install outside normal load order.

05a - Combat & Stealth

Goal: Enemy AI, stealth systems, damage model, netrunning, NPC behavior, and moment-to-moment action. How combat and encounters play out.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Combat Evolved

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/29125>
- **Version:** 4.10.1
- **Released:** 2026-04-23
- **Summary:** Comprehensive enemy AI overhaul. Enemies use suppressive fire, flank, retreat to heal, coordinate attacks, and use smart weapons and grenades tactically. Each enemy archetype (gang, security, maxtac) has distinct behavioral profiles.
- **Why:** Vanilla enemy AI is reactive and predictable — enemies stand in the open and take turns shooting. This makes every firefight dynamic and forces the player to use real tactics: reposition, use cover, prioritize threats, and manage stamina.
- **Conflicts:** None known. Designed to be compatible with most combat mods.
- **Dependencies:** Codeware, DigitalVixen Core, Mod Settings, redscript, TweakXL. Optional: True First Person Camera 2.0 for camera effects.
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings -> Combat Evolved. To uninstall, delete `r6/scripts/CombatEvolved` and `r6/tweaks/CombatEvolved` directories.
- **Performance:** Light (AI decision calculations only)

Stealthrunner - Stealth Gameplay Expansion

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7616>
- **Version:** 1.11.1
- **Released:** 2026-06-14
- **Summary:** Adds stealth objectives (Ghost, Shadow, Pacifist, No-Touch, Hero) to all applicable quests and gigs. Full perk tree with 11 perks including pickpocketing, audio disruption, and cyberninja. Rewards include new cyberware and iconic weapon recipes.
- **Why:** Fundamentally transforms stealth gameplay — gives meaningful incentive and reward for non-lethal approaches in the style of Deus Ex and Dishonored. Adds progression that persists across the entire playthrough.

- **Conflicts:** Compatible with Limited HUD. Pairs well with Silent Silencers and Throwing Knives.
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Input Loader, Native Settings UI, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Configure via Native Settings UI -> Mods -> Stealthrunner. Has progression import/export. **Do NOT convert to REDmod in MO2** — keep archive files in `archive/pc/mod/`.
- **Performance:** Light (new HUD elements and objective tracking)

Silent Silencers and Throwing Knives

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4070>
- **Version:** 1.6.2
- **Released:** 2023-12-08
- **Summary:** Prevents combat auto-trigger when using silenced weapons or throwing knives from stealth. Enemies investigate rather than instantly knowing your position. Configurable detection chance, range, and cover visibility debuff.
- **Why:** Fixes a core stealth design flaw — lets silenced weapons work as intended without requiring one-shot kills. Essential companion to Stealthrunner.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Cyber Engine Tweaks, Native Settings UI, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Configure via Native Settings UI -> Mods -> Silent Silencers. Default min stealth range is 2m.
- **Performance:** None

Dead Body Alert

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26746>
- **Version:** 1.0
- **Released:** 2026-01-08
- **Summary:** Enemies react to discovering dead bodies — they stop acting like nothing happened and instead investigate, raise alarms, and search for the player. No more chilling next to a fallen squadmate.
- **Why:** Vanilla stealth has a fundamental immersion gap — enemies ignore dead allies entirely. This makes stealth gameplay more realistic and requires the player to hide or move bodies, adding tactical depth to non-lethal approaches.
- **Conflicts:** None known
- **Dependencies:** redscript, Mod Settings (optional — toggle main feature and optional features)

- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings if installed. Optional feature toggle available.
- **Performance:** None

Immersive Stealth Weapon

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27149>
- **Version:** 1.01
- **Released:** 2026-01-28
- **Summary:** Overhauls stealth weapon combat — no more guaranteed one-shot kills from stealth. Enemies have dynamic awareness, noise matters, and positioning determines whether you get the drop on someone. Strategic stealth combat.
- **Why:** Vanilla stealth weapons trivialize encounters with guaranteed stealth kills. This makes stealth a genuine challenge where preparation, positioning, and equipment choice determine success rather than a binary "undetected = kill" formula.
- **Conflicts:** Pairs well with Dead Body Alert and Silent Silencers and Throwing Knives
- **Dependencies:** redscript, TweakXL, Mod Settings (optional)
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings if installed.
- **Performance:** None

Damage Scaling and Balance

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/1712>
- **Version:** 4.3.0
- **Released:** 2026-04-04
- **Summary:** Configurable damage multipliers for NPCs and player by level curve, enemy tier (trash through maxtac), and damage type (headshot, quickhack, grenade, melee). Also scales stamina costs.
- **Why:** Core balance tool — fine-tune difficulty to ensure combat stays challenging without resorting to bullet-sponge design. Multiple presets available including "RMK Balanced".
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks, Native Settings UI, redscript
- **MO2 Notes:** Extract to game root. Configure via Native Settings UI -> Mods -> Dmg. Scaling. Level curve presets available. Supports disabling multipliers in flashback scenes.
- **Performance:** None

Damage Scaling and Balance - Extended

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21865>
- **Version:** 1.0.0

- **Released:** 2025-05-20
- **Summary:** Companion to Damage Scaling and Balance — extends the configurable damage curve with additional scaling options, enemy tier refinements, and new preset configurations.
- **Why:** Adds finer-grained control over the damage curve for players who want more customization than the base DSaB provides. Integrates seamlessly with the existing DSaB framework.
- **Conflicts:** Requires Damage Scaling and Balance (1712)
- **Dependencies:** Damage Scaling and Balance (1712), Cyber Engine Tweaks, Native Settings UI, redscript
- **MO2 Notes:** Extract to game root. Install AFTER Damage Scaling and Balance. Configure via Native Settings UI -> Mods -> Dmg. Scaling.
- **Performance:** None

Much Better Netrunning

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27237>
- **Version:** 2.20
- **Released:** 2026-02-03
- **Summary:** Complete netrunning overhaul — successor to Better Netrunning, rebuilt from scratch. Makes quickhacking dangerous, rewarding, and tactical with configurable trace time, RAM costs, cooldowns, and enemy netrunner behavior.
- **Why:** Vanilla netrunning becomes overpowered at midgame — enemies never trace you and RAM regenerates too fast. This makes quickhacking a high-risk, high-reward playstyle where positioning, timing, and loadout planning matter.
- **Conflicts:** None known
- **Dependencies:** Codeware, Cyber Engine Tweaks, Native Settings UI, RED4ext, Reds Logging Headers, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Native Settings UI -> Mods -> Much Better Netrunning. Supports full configuration of trace time, RAM costs, and enemy netrunner difficulty.
- **Performance:** None

They Will Remember

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19747>
- **Version:** 2.4.4
- **Released:** 2025-02-13
- **Summary:** Full gang reputation system with reinforcements, retaliation squads, relationships, and a disguise system. Gangs remember your actions — help them and they'll be neutral or friendly; attack them and they send hit squads.

- **Why:** Vanilla gangs are cosmetic — every encounter resets to neutral. This makes faction choice matter: your reputation with each gang persists across the entire playthrough and affects random encounters, gig availability, and dialogue.
- **Conflicts:** None known. Equipment-EX heavily recommended for disguise system.
- **Dependencies:** Codeware, Mod Settings, redscript. Recommended: Equipment-EX, Inventory Adjustments Hub, Night City Alive (REDmod).
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings. Disguise system requires clothing with gang-affiliation tags — use Inventory Adjustments Hub to view tags on items.
- **Performance:** Light (reputation tracking and spawn management)

Watch Your Back

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27792>
- **Version:** 1.0
- **Released:** 2026-02-24
- **Summary:** Adds ambushers who try to rob V in alleys, secluded areas, and during encounters. Random encounter system that creates dynamic, dangerous moments during exploration.
- **Why:** Night City is supposed to be dangerous, but vanilla exploration is completely safe outside scripted encounters. Ambush events make the city feel lawless and unpredictable, rewarding awareness and preparation.
- **Conflicts:** None known
- **Dependencies:** Mod Settings, RED4ext, redscript
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings. Ambush frequency and difficulty are configurable.
- **Performance:** None

Bounties Restored

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21820>
- **Version:** 1.0.0
- **Released:** 2025-05-15
- **Summary:** Restores bounty values to non-elite enemies, making random encounters and open-world combat more financially rewarding.
- **Why:** Vanilla 2.0 removed bounties from most enemies, flattening the reward curve for open-world combat. Restoring them gives every firefight a small monetary incentive, making random encounters feel worthwhile.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks

- **MO2 Notes:** Extract to `Cyberpunk 2077/bin/x64/plugins/cyber_engine_tweaks/mods/`. Configure via CET overlay.
- **Performance:** None

NIGHT CITY ALIVE

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10395>
- **Version:** 2.2
- **Released:** 2023-10-24
- **Summary:** Major NPC population and traffic overhaul. Increases crowd density, adds dynamic pedestrian behaviors, and makes Night City's streets feel genuinely alive with varied citizen activities, vehicle traffic patterns, and ambient events.
- **Why:** Vanilla Night City's streets feel sparse and lifeless. This mod transforms the city into a bustling metropolis with realistic population density and traffic flow, serving the "living world" pillar. Replaces Immersive Road Crossing (#26131, removed from o6b) with broader and more comprehensive coverage. 9,400+ endorsements.
- **Conflicts:** May conflict with other traffic or NPC population mods. Compatible with Night City Interactions (different scope — NCA handles ambient population, NCI handles player-initiated social interactions). Compatible with Immersive Fixers and Responsive NPCs (different behavioral domains).
- **Dependencies:** REDMod
- **MO2 Notes:** REDMod file — deploy via REDmod launcher or MO2 REDmod plugin. Test traffic density settings to find the right balance for 4K performance. Tag as **Root**.
- **Performance:** Moderate (additional NPC and vehicle simulation)

Responsive NPCs

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/14800>
- **Version:** 0.26
- **Released:** 2024-05-20
- **Summary:** NPCs react dynamically to player actions — commenting on drawn weapons, fleeing from combat, reacting to player appearance and cyberware, and responding to world events contextually.
- **Why:** Vanilla NPCs are oblivious to the player's actions beyond basic combat states. This adds a layer of world reactivity where citizens notice and respond to what V does, making the world feel responsive rather than scripted. Complements NCA (handles population density) by adding behavioral depth to those NPCs.
- **Conflicts:** Low — behavioral scripting only, no world edits. Compatible with NCA and Night City Interactions.
- **Dependencies:** Cyber Engine Tweaks, Native Settings UI (optional)

- **MO2 Notes:** Extract to CET plugins folder. Configure reaction frequency and types via CET overlay or Native Settings UI. Tag as **Root**.
- **Performance:** Light (CET scripting, negligible overhead)

Shift - Dynamic First Person Camera

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/22340>
- **Version:** Verify
- **Released:** June 2025
- **Summary:** Adds dynamic camera movement in first-person — head bob, inertia, leaning, and contextual camera shifts based on movement and actions.
- **Why:** Vanilla first-person camera is rigid and disconnected from V's movement. Shift adds physical presence to the first-person view, making walking, running, and combat feel more grounded without affecting aim or gameplay.
- **Conflicts:** Check compatibility with Immersive First Person (#9309) — Shift focuses on camera dynamics while IFP focuses on body visibility. May be complementary.
- **Dependencies:** Cyber Engine Tweaks, Native Settings UI (optional)
- **MO2 Notes:** Extract to CET plugins folder. Configure intensity via Native Settings UI. Test alongside Immersive First Person for compatibility. Tag as **Root**.
- **Performance:** None

Easier Controller Sprint

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26610>
- **Version:** 1.1.0
- **Released:** 2026-01-05
- **Summary:** Makes controller sprint activate on left-stick press only, removing the requirement to also hold a face button. Toggle and hold modes supported.
- **Why:** Vanilla controller sprint requires holding both left-stick click and a face button, which is ergonomically awkward. This makes sprinting feel natural on controller without changing game balance.
- **Conflicts:** None known
- **Dependencies:** redscript
- **MO2 Notes:** Extract to game root. Files go to `r6/scripts/`. Choose hold or toggle mode in the config file.
- **Performance:** None

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Combat Evolved
2. Stealthrunner - Stealth Gameplay Expansion
3. Silent Silencers and Throwing Knives
4. Dead Body Alert
5. Immersive Stealth Weapon
6. Damage Scaling and Balance
7. Damage Scaling and Balance - Extended
8. Much Better Netrunning
9. They Will Remember
10. Watch Your Back
11. Bounties Restored
12. NIGHT CITY ALIVE
13. Responsive NPCs
14. Shift - Dynamic First Person Camera
15. Easier Controller Sprint

Notes: - **Damage Scaling and Balance - Extended** must be installed after Damage Scaling and Balance - **NIGHT CITY ALIVE** is a REDMod mod — deploy via REDmod launcher or MO2 REDmod plugin - **Stealthrunner** should not be converted to REDmod — keep archives in `archive/pc/mod/`

05b - RPG Systems & Economy

Goal: Character progression, skills and attributes, cyberware, item systems, healing items, throwables, the game economy, and immersive camera features. How your character grows and how resources flow.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Cyberware-EX

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/9429>
- **Version:** 1.5.6
- **Released:** 2026-05-02
- **Summary:** Cyberware slot expansions allowing multiple implants in OS, eyes, arms, and legs. Install Cyberdeck, Sandevistan, Berserk simultaneously.
- **Why:** Core RPG depth — removes arbitrary equip restrictions, letting players build hybrid cyberware setups that match their playstyle. Slots unlockable via perks (expansion mode) or purchasable at ripperdocs (override mode).
- **Conflicts:** None known. Successor to System-EX.
- **Dependencies:** Codeware, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Supports expansion mode (perk-unlocked slots) and override mode (buy slots for 10K eddies). Optional "extended slots" addon gives 10 extra slots across categories. Configure via `r6/scripts/CyberwareEx`.
- **Performance:** None

Convo Skill Check Scaling

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2886>
- **Version:** 1.4.1
- **Released:** 2023-12-06
- **Summary:** Scales conversation skill check requirements higher with player level. Easy/Medium checks can be bumped to Medium/Hard at configurable thresholds, making attribute investment meaningful for dialogue outcomes.
- **Why:** Without this, most dialogue checks are trivially low (max 7 observed) even at high level. Pairs with Clear Skill Checks to make attribute choices actually matter in conversations.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks, Native Settings UI, redscript

- **MO2 Notes:** Extract to game root. Files go to `r6/scripts/`. Configure via Native Settings UI -> Mods -> RMK MODS. Has scaling factor slider (default 0.75) and difficulty threshold settings.
- **Performance:** None

Weapon Conditioning (Tier System Overhaul)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10479>
- **Version:** 1.2.0
- **Released:** 2023-10-31
- **Summary:** Introduces a Condition stat to all weapons. Weapons degrade with use and must be repaired or replaced. Fixes the loot and crafting material economy by giving every weapon a lifespan and maintenance cost.
- **Why:** Vanilla weapon economy has no sink — once you find a good weapon, you never need another. Condition degradation creates demand for replacement weapons and crafting materials, making loot discoveries and the crafting system meaningful throughout the game.
- **Conflicts:** None known
- **Dependencies:** Codeware, Cyber Engine Tweaks, Mod Settings, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings (or edit `Config.reds` manually). Install BEFORE Skillful Attributes and Skillful for best compatibility.
- **Performance:** None

Skillful

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/9309>
- **Version:** 2.0.3
- **Released:** 2023-09-27
- **Summary:** Spinoff from Skillful Attributes adding EXP multipliers for skill proficiencies, character levels, and street cred. Awards extra perk points and cyberware capacity at milestone levels. User-configurable via Mod Settings.
- **Why:** Required by Skillful Attributes, but also stands alone as a progression accelerator that rewards investment in skills. Perk points and cyberware capacity at milestones make leveling feel more rewarding at every step.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Mod Settings, redscript, TweakXL. Codeware may be needed.
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings. Install BEFORE Skillful Attributes. Read redscript requirements page for any additional dependencies.
- **Performance:** None

Skillful Attributes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/9281>
- **Version:** 1.3.1
- **Released:** 2023-09-27
- **Summary:** Attribute levels increase through skill proficiency — the more you fight a certain way, the better you get at the related attributes. Replaces flat attribute-point leveling with use-based progression. Now requires Skillful.
- **Why:** Vanilla attribute allocation is pure menu management — you distribute points at level-up regardless of how you play. This rewards actual playstyle: use Blade weapons and your Reflexes improve naturally, reinforcing build identity through gameplay.
- **Conflicts:** None known. Designed to work with Skillful.
- **Dependencies:** ArchiveXL, Mod Settings, redscript. Requires Skillful (#9309). Codeware may be needed.
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings. **REQUIRES** Skillful (#9309) to function. Install Weapon Conditioning before this for best compatibility.
- **Performance:** None

Renaissance Punk - Perk Scaling

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/14037>
- **Version:** 2.12.1
- **Released:** 2024-04-05
- **Summary:** Makes all perks scale with their associated attributes and/or skills, growing more powerful as your character develops in those areas.
- **Why:** Vanilla perks are static — they do the same thing at level 10 as level 60. This makes perk potency reflect your investment in attributes and skills, rewarding specialized builds and making level-up choices feel more impactful.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks, redscript, TweakXL, Mod Settings
- **MO2 Notes:** Extract to game root. Configure via Mod Settings -> Renaissance Punk. Supports optional files for different scaling intensities.
- **Performance:** None

Flesh and Chrome

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27988>
- **Version:** 1.24.0
- **Released:** 2026-03-11

- **Summary:** Expands stamina into a full fatigue and recovery system. Creates a natural daily rhythm between action, rest, food, and chrome management. Stamina regen slows with fatigue; sleep, food, and rest restore it.
- **Why:** Vanilla stamina is a short combat resource that recharges in seconds. This makes stamina a persistent resource you manage across the day — when to push harder, when to rest, what to eat, how much chrome to install.
- **Conflicts:** Compatible with Cyberware-EX and most combat mods. May conflict with mods that alter base stamina behavior.
- **Dependencies:** Codeware, redscript, DigitalVixen Core, Redscript Configuration Framework. Recommended: Consumable Animations.
- **MO2 Notes:** Extract to game root. Tag as **Root**. Optional addon: Flesh and Chrome - Carry Overhaul (#28375) for inventory-weight integration. Review mod page for optional file choices.
- **Performance:** None

Immersive Healing

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26281>
- **Version:** 3.3.0
- **Released:** 2025-12-15
- **Summary:** Replaces the cooldown-based healing system with individual health items in your inventory. Healing items are lootable, purchasable, and must be managed like any other consumable. Includes animation and sound overhauls.
- **Why:** Vanilla healing is arcadey — press a button and wait for a cooldown. This makes healing a resource-management decision: carry enough health items, use them strategically, and restock between engagements.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Input Loader, Native Settings UI, RED4ext, redscript, TweakXL (v1.11.1+)
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Native Settings UI -> Mods. Multiple file versions available (choose based on your other mods).
- **Performance:** None

Immersive Grenades

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25334>
- **Version:** 3.3.0
- **Released:** 2025-10-28
- **Summary:** No more charges — grenades are tracked as individual items integrated into the world. Each grenade you find or buy is a physical object. Also reworks the Ticking Time Bomb

perk. Supports integration with custom grenade mods.

- **Why:** Vanilla grenade charges are abstract and replenish for free. Tracking grenades as items makes explosive tactics a deliberate choice with resource consequences rather than a spamable panic button.
- **Conflicts:** May conflict with mods that alter grenade behavior or the Ticking Time Bomb perk
- **Dependencies:** ArchiveXL, Cyber Engine Tweaks, Native Settings UI, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Native Settings UI. Supports optional integration with custom grenade mods (Big Chungus Grenade, Chomper, GASH, etc.).
- **Performance:** None

Immersive Throwables

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25074>
- **Version:** 1.0.0
- **Released:** 2025-10-17
- **Summary:** Throwing a weapon unequips it and drops it at the impact location instead of going on cooldown. You must physically retrieve thrown weapons or lose them. Adds real consequence to knife and axe throws.
- **Why:** Vanilla throwable weapons magically return to your inventory. This makes each throw a tactical decision — if you miss or can't reach the landing spot, you lose that weapon for the rest of the fight.
- **Conflicts:** Compatible with Silent Silencers and Throwing Knives
- **Dependencies:** ArchiveXL, Cyber Engine Tweaks, Input Loader, Native Settings UI, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Native Settings UI. Pairs with Throwable Weapon Reworked for stamina-based recovery.
- **Performance:** None

Throwable Weapon Reworked

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27255>
- **Version:** 1.0
- **Released:** 2026-02-02
- **Summary:** Redesigns throwable weapon recovery to be stamina-based. Character growth, builds, and cyberware choices affect how quickly you recover thrown weapons. Preserves each weapon's original characteristics while tying recovery to your build.

- **Why:** Vanilla throwable recovery is flat and disconnected from character progression. Making it stamina-based gives attribute points and cyberware choices direct gameplay impact on thrown weapon viability.
- **Conflicts:** None known. Pairs with Immersive Throwables for full throwing overhaul.
- **Dependencies:** ArchiveXL, redscript, TweakXL. Recommended: Stamina Regen Fixes.
- **MO2 Notes:** Extract to game root. Tag as **Root**. Works automatically — optional configuration.
- **Performance:** None

The Immersive Way

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/30352>
- **Version:** Verify
- **Released:** July 2026
- **Summary:** Adds third-person immersive scenes for Fem V using the Native Interactions Framework, with optional Dark Future integration for survival-contextual actions.
- **Why:** Extends the Native Interactions Framework with additional immersive scenes, giving Fem V third-person context for daily activities. Dark Future integration ties survival mechanics to visual storytelling, deepening the RPG experience.
- **Conflicts:** None known. Requires Native Interactions Framework.
- **Dependencies:** Native Interactions Framework (#10479). Optional: Dark Future (#16300).
- **MO2 Notes:** Extract to game root. Fem V only. Install after Native Interactions Framework and Dark Future. Tag as **Root**.
- **Performance:** None

Specialized Ripperdocs

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23399>
- **Version:** 1.1.1
- **Released:** 2025-08-11
- **Summary:** Each ripperdoc sells only two types of cyberware. Automatically sorts all cyberware — including modded items — to match those specializations. Iconic items are vendor-exclusive with a built-in CET lookup table.
- **Why:** Vanilla ripperdocs are interchangeable — every vendor sells everything. This forces exploration and makes ripperdoc choices meaningful. Finding an iconic Sandevistan now requires visiting the specialist who carries it, adding RPG depth to cyberware acquisition.
- **Conflicts:** None known. Designed to complement Ripperdoc Cyberware Specializations but functions independently.
- **Dependencies:** Cyber Engine Tweaks

- **MO2 Notes:** Extract to game root. Tag as **Root**. Built-in CET window (requires button click) shows where each iconic is sold. Works seamlessly with Ripperdoc Vendor UI Enhancements (#23180) for map tooltip integration.
- **Performance:** None

Black Chrome - Cyberware Expansion

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/16031>
- **Version:** 1.1.10
- **Released:** 2024-07-31
- **Summary:** Adds new cyberware items across all categories. Fair and balanced additions that expand chrome variety without breaking game balance.
- **Why:** Even with Specialized Ripperdocs, the vanilla cyberware pool can feel shallow on repeat playthroughs. Black Chrome adds meaningful variety — new OS options, new arm mods, new leg implants — while maintaining the "fair and balanced" design philosophy by the same author as Neuralware and SynthDose.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Cyber Engine Tweaks, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. 13 translation packs available. Same author as Neuralware (#19798) — evaluate both together. Install before Neuralware if using both.
- **Performance:** None

Neuralware - Chipware Expansion

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19798>
- **Version:** 1.2.1
- **Released:** 2025-03-10
- **Summary:** 40+ new neural implants with a chipware system — software chips that consume RAM, hardware chips with cooldowns, and skill chips. Relic becomes a neural chip after acquisition. Perk reworks for Chipware Connoisseur and Driver Update.
- **Why:** Deepens the cyberware system with a new neural capacity resource and chip management layer. Software chips require licenses that expire (or can be cracked), adding an ongoing resource sink. The neural capacity trade-off forces meaningful build decisions — every chip slot matters.
- **Conflicts:** Incompatible with: Cyberware RNG Bonuses Removed (#15543), More Melees More Fun (#14910), More Cyberware Capacity per Level (#10276), Ripperdoc Current Capacity Bug Fix (#11241). Raven Gemini II (#16209) mostly works but breaks attribute skill bonus chips.
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Input Loader, Mod Settings, RED4ext, redscript, Reflex is Cool, TweakXL, VendorsXL. Optional: Audioware (custom

sounds), CustomHackingSystem (chipware cracking), Bug Fix - Base Fists (#14130).

- **MO2 Notes:** Extract to game root. Tag as **Root**. Install after Black Chrome if using both (same author). Moderately complex — test chip interactions before committing to a playthrough. 18 open bugs tracked on Nexus.
- **Performance:** Light (chip effects and UI additions)

Much Better Eddies

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/30532>
 - **Version:** 1.3
 - **Released:** 2026-07-12
 - **Summary:** Full economy overhaul — per-district reputation system with buy/sell price scaling, quest reward rebalance, and a Lester-style black-market fixer line (Dead Channel).
 - **Why:** Vanilla economy breaks by midgame — you're a millionaire with nothing meaningful to spend on. This rebuilds the curve: jobs are your income, loot is supplemental, and every district's reputation affects prices. Fits the "no cheat" philosophy by making the economy tighter, not easier.
 - **Conflicts:** NOT compatible with Economy Punk, Economy of 2077, Economy Tweaks, Economy Rebalance, Atelier Price Fixer. Compatible with Dark Future and Virtual Atelier.
 - **Dependencies:** Cyber Engine Tweaks, RED4ext, redscript, Native Settings UI, Codeware, TweakXL, Browser Extension
 - **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Native Settings UI -> Mods -> Much Better Eddies. Five presets: Vanilla, Easy, Standard (default), Hard, Custom. New game recommended; existing saves need cleanup of acquired wealth.
 - **Performance:** Light (reputation tracking per district)
-

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Cyberware-EX
2. Convo Skill Check Scaling
3. Weapon Conditioning (Tier System Overhaul)
4. Skillful
5. Skillful Attributes
6. Renaissance Punk - Perk Scaling
7. Flesh and Chrome
8. Immersive Healing
9. Immersive Grenades

10. Immersive Throwables
11. Throwable Weapon Reworked
12. The Immersive Way
13. Specialized Ripperdocs
14. Black Chrome - Cyberware Expansion
15. Neuralware - Chipware Expansion
16. Much Better Eddies

Notes: - **Skillful** must be installed **before** Skillful Attributes (Skillful Attributes requires it) - **Weapon Conditioning** should be installed before Skillful/Skillful Attributes for best compatibility - **Flesh and Chrome** addons (Carry Overhaul) go after the main Flesh and Chrome install - **Specialized Ripperdocs** goes before Black Chrome and Neuralware so cyberware is correctly distributed across ripperdocs - **Black Chrome** and **Neuralware** are by the same author — install Black Chrome first if using both - **Much Better Eddies** should be installed last in this category due to its broad economy overrides — install after all other gameplay mods

06a - Survival & Systems

Goal: Survival-lite mechanics, economic systems, transportation, and world-scale systems that add friction, consequence, and meaningful choices to daily life in Night City.

Metro System

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/3560>
- **Version:** 1.92
- **Released:** 2023-11-03
- **Summary:** Fully functional NCART metro system with 19 handbuilt explorable stations. First/third person views, controller support, radio integration. Accessible via fast travel gate icons on world map.
- **Why:** Transformational — makes the metro a real gameplay option for traversal. Each station is handcrafted and worth exploring. Pairs with Limited Fast Travel to make city travel meaningful.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Native Settings UI
- **MO2 Notes:** Extract to game root. Configure via Native Settings UI -> Mods (train speed, camera distance, station wait time, price per station). Install manually, not via Vortex.
- **Performance:** None

Wannabe Edgerunner - A simple Cyberpsychosis mod

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/5646>
- **Version:** 2.3.3
- **Released:** 2026-06-01
- **Summary:** Adds Humanity stat that degrades from cyberware usage and kills. Low Humanity causes visual glitches and combat debuffs; zero triggers Cyberpsychosis (VFX buffs, police/MaxTac spawn). Humanity restored via sleep, shower, petting cat/iguana, apartment interactions.
- **Why:** Essential survival-lite layer — gives gameplay consequences to cyberware installation and lethal approaches. Makes apartment amenities meaningful beyond cosmetics.
- **Conflicts:** Compatible with Stealthrunner (optical camo support). Compatible with Cyberware-EX.
- **Dependencies:** ArchiveXL, Codeware, Mod Settings, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Configure via Mod Settings. Neuroblockers sold at med vendors (or craftable). To uninstall safely: restore humanity first, run `Game.EdgerunnerClear()`

in CET console, save, then delete mod files.

- **Performance:** None

Immersive Cyberware

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21916>
- **Version:** 1.0.2
- **Released:** June 2025
- **Summary:** Adds visual effects and UI feedback to cyberware installation — screen glitches, distortion, and cyberware-specific HUD elements when installing new chrome.
- **Why:** Vanilla cyberware installation is a menu click with no ceremony. This makes getting chipped feel like the invasive, body-altering procedure it's supposed to be. Complements Cyberware-EX (#11077) — Immersive Cyberware handles visuals/feedback, Cyberware-EX handles slot expansion.
- **Conflicts:** None known. Compatible with Cyberware-EX (different systems).
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Install after Cyberware-EX. Tag as **Root**.
- **Performance:** None

Limited Fast Travel

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/1889>
- **Version:** 1.3
- **Released:** 2025-08-06
- **Summary:** Reduces the number of active fast travel terminals to a configurable subset. Only metro stations and key hubs remain active by default; individual terminals can be toggled on/off via Mod Settings.
- **Why:** Encourages exploration and use of the metro system. Turns fast travel from an everywhere-anywhere convenience into a meaningful navigation choice.
- **Conflicts:** None known
- **Dependencies:** Mod Settings, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Configure via Mod Settings. Reload save after changes. Metro station terminals enabled by default; all others disabled.
- **Performance:** None

Dark Future - Urban Survival Gameplay

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/16300>
- **Version:** 2.0.3
- **Released:** 2026-01-19

- **Summary:** Fully-featured survival system with Basic Needs (Hydration, Nutrition, Energy), Anxiety, Addiction, and more. Adds temperature effects, fast travel restrictions, and survival-lite mechanics that integrate with the existing game systems.
- **Why:** Core survival layer that makes exploration, preparation, and resource management meaningful. Every food item, drink, and rest stop becomes a gameplay decision rather than set dressing. Complements Wannabe Edgerunner's Humanity system for a complete survival experience.
- **Conflicts:** None known. Compatible with Wannabe Edgerunner, Cyberware-EX. Dark Future Core is a streamlined subset — use full Dark Future for this modlist.
- **Dependencies:** ArchiveXL, Codeware, Input Loader, Mod Settings, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings. For existing saves, run the setup command in CET console: `Game.DarkFutureSetup()` . Recommended: disable fast travel restrictions if using Limited Fast Travel.
- **Performance:** Light (HUD widgets for needs tracking)

Drug Dealer

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27800>
- **Version:** Verify
- **Released:** 2026
- **Summary:** DLC-sized mod adding a full drug dealing gameplay loop — source, process, and distribute illicit substances across Night City with risk/reward mechanics.
- **Why:** Night City is defined by its drug trade as much as its chrome. This adds a morally grey gameplay system that fits the survival-lite philosophy — high risk, high reward, with consequences for getting caught. Complements Dark Future's drug/trafficking systems.
- **Conflicts:** Check Dark Future (#16300) compatibility — may overlap on drug-related mechanics.
- **Dependencies:** ArchiveXL, Codeware. Optional: Audioware.
- **MO2 Notes:** Extract to game root. Verify balance settings before playing — ensure it's not a cheat money printer. Tag as **Root**.
- **Performance:** None

Eviction Notice - Story-Driven Rent System

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23187>
- **Version:** 1.0.3
- **Released:** 2025-08-08
- **Summary:** Adds a fully-featured apartment rent system with recurring payments, late fees, and eviction consequences. Includes new characters to meet via text and lightweight quest

content around housing.

- **Why:** Transforms apartments from a one-time purchase into an ongoing financial decision. Makes earning eddies meaningful beyond gear upgrades and creates natural downtime between missions. Story-driven approach fits the "no cheat" philosophy.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, Mod Settings, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings. Rent is due every 7 in-game days by default (configurable). Supports all owned apartments.
- **Performance:** None

Anti-Theft Measures

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27229>
- **Version:** 2.1.1
- **Released:** 2026-01-31
- **Summary:** Stealing vehicles requires breaching the security system. Vehicles may have deflating tires, jammed brakes, tracking devices, and other anti-theft countermeasures that activate if you fail the breach.
- **Why:** Vanilla car theft is consequence-free — walk up to any vehicle and drive off. This adds a meaningful theft minigame and makes owned vehicles feel valuable. Pairs with Limited Fast Travel to make transportation choices matter.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, Mod Settings, NightlyNow Core, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings. Optional Audioware recommended for audio feedback during breach attempts.
- **Performance:** None

Immersive Meditations - Unmarked Locations

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23336>
- **Version:** 4
- **Released:** 2025-08-01
- **Summary:** 49 meditation spots at scenic locations across Night City and the Badlands. Sit down, wait 17 seconds, and receive a Rested buff. Dark Future nerve recovery and Wannabe Edgerunner humanity support included.
- **Why:** Complements Dark Future's survival-lite mechanics — meditation provides a natural way to recover nerves without fast-traveling to an apartment. Wannabe Edgerunner Humanity adjustments are natively supported. Makes scenic locations worth seeking out.
- **Conflicts:** None known

- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Native Interactions Framework, RED4ext, redscript. Dark Future (optional, for nerve recovery). Wannabe Edgerunner (optional, for Humanity).
- **MO2 Notes:** Extract to game root. v4 ensured Dark Future compatibility with latest update. v3 added 21+ new spots and Dogtown locations. 49 micro-zones total — mod does nothing until you stand at one.
- **Performance:** None

Filthy Access Points

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27698>
- **Version:** 1.2.1
- **Released:** 2026-02-24
- **Summary:** Jacking into access points now carries risk — chance of malware infection and a Personal Link Integrity system that degrades with each connection. Repair at ripperdocs (cost scales with damage), consume RAM Jolt for partial healing. Flatline at 0% integrity. Daemon Chain Immunity: completing minimum uploads grants temporary malware immunity.
- **Why:** Vanilla access point hacking is a consequence-free mini-game. This adds meaningful risk/reward — every access point becomes a decision rather than a reflex. Ripperdoc repair costs create an eddie sink. RAM Jolt consumption ties into the consumable economy. Fits the "add friction, not remove it" philosophy perfectly.
- **Conflicts:** Repair UI hint may overlap visually with Wannabe Edgerunner's cyberware page UI, but features work independently.
- **Dependencies:** ArchiveXL, Input Loader, Mod Settings, RED4ext, redscript
- **MO2 Notes:** Extract to game root. 100% customizable via Mod Settings. External API added in v1.2 for integration with future Netrunner mods. Recommended pairing: NC Courier Jobs (uses access points for data delivery jobs). Last updated June 2026.
- **Performance:** None

Dedra's Truck Simulator (Convoy Job Delivery)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/24102>
- **Version:** 3.0
- **Released:** 2025-09-01
- **Summary:** Convoy job delivery system with physical cargo, truck ownership, rank progression, and real-world time penalties. Drive to load points, transport cargo, and deliver across Night City and the Badlands. Includes 2 homebases, 33+ locations, and an unlockable new truck.
- **Why:** Adds a blue-collar job system that fits Night City's working-class culture. Physical cargo (v3.0+) makes deliveries tangible. Rank system and truck ownership provide

progression. Configurable payouts — balanced, not a money cheat.

- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Native Settings UI, RED4ext, redscript, TweakXL, Vehicle Pack - Utility (#4530)
- **MO2 Notes:** Extract to game root. v1.3 specifically patched for 2.31 compatibility. Cheat rank-up option is opt-in via CET command — not the default. Payment penalties for late deliveries based on real-world time. Delete old install folder before updating from v1.x to v2.0+.
- **Performance:** None

Immersive Odometer and Fuel System

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23834>
- **Version:** 4.7
- **Released:** September 2025
- **Summary:** Adds a realistic odometer, fuel consumption, and refueling system for all player vehicles. Fuel depletes with distance driven and must be replenished at gas stations.
- **Why:** Vehicles in vanilla Cyberpunk have infinite range with no operating costs. Adding fuel management creates meaningful vehicle ownership decisions — do you take the fast car that guzzles fuel, or the efficient commuter? Gas stations become functional locations, adding purpose to the world.
- **Conflicts:** None known. Compatible with Virtual Car Dealer and all vehicle mods.
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL. Optional: Native Settings UI.
- **MO2 Notes:** Extract to game root. Configure fuel consumption rate and odometer units via Native Settings UI. Refuel at any gas station. Tag as **Root**.
- **Performance:** None

NC Courier Jobs

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25551>
- **Version:** 3.3
- **Released:** 2025-12-01
- **Summary:** Courier and data delivery job system. Pick up packages or data, deliver them across Night City. Uses existing netrunner chairs and dataports. XP and street cred rewards scale with character level and job distance. Customizable payouts.
- **Why:** Complements the living world economy with an honest-work income stream. Uses existing world objects (netrunner chairs, dataports) — makes infrastructure that already exists feel purposeful. Player XP/street cred integration means courier work is a viable alternative to combat grinding.

- **Conflicts:** None known
 - **Dependencies:** ArchiveXL, Browser Extension, Codeware, Cyber Engine Tweaks, Native Interactions Framework, redscript, Phantom Liberty. Recommended: Filthy Access Points (#27698), Audioware (#12001).
 - **MO2 Notes:** Extract to game root. Built-in job and location editor for custom content. Payout multiplier configurable. Supports addon jobs/locations from other users.
 - **Performance:** None
 - **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26131>
 - **Version:** 1.4.2
 - **Released:** 2025-12-08
 - **Summary:** Increases traffic density and pedestrian responsiveness. Vehicles react more dynamically to gunfire, chases, and player actions. Pedestrians flee, dive for cover, and cross roads with realistic timing.
 - **Why:** Night City's streets feel empty and unresponsive in vanilla. This turns street shootouts and high-speed chases into chaotic, dynamic encounters where traffic and pedestrians react believably.
 - **Conflicts:** May conflict with other traffic-modifying mods
 - **Dependencies:** RED4ext, redscript, Mod Settings (optional)
 - **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Mod Settings if installed. Optional: install Impact Kill Looting Fix to avoid seeing loot despawn bugs from traffic accidents.
 - **Performance:** Light (additional NPC traffic calculations)
-

1st Night City Bank

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/29412>
- **Version:** 1.6
- **Released:** 2026-05-04
- **Summary:** Full in-game banking system — deposit, withdraw, and take loans with daily compound interest. Loan system with trauma team asset recovery on default. Fraud detection, bankruptcy, push notifications, and biometric authentication.
- **Why:** Adds meaningful economic depth to Night City. Loans create risk/reward decisions — borrow for chrome but face escalating consequences on missed payments. The 3-day demand period and trauma team recovery prevent loans from being a cheat mechanic. Complements Eviction Notice and Dark Future for a complete survival-economy layer.
- **Conflicts:** None known

- **Dependencies:** Calendar (#30331), Redscript Configuration Framework (#30726), Codeware, redscript. Previous versions required Mod Settings (migrated in v1.6).
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Redscript Configuration Framework. Yield-based taxation on interest. Drop Box ATM add-on available for physical banking interactions. Install after Calendar and Redscript Configuration Framework.
- **Performance:** None

Stock Market and News System

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6319>
- **Version:** 1.4
- **Released:** 2024-02-28
- **Summary:** Fully usable stock market system that dynamically reacts to quests and player actions. Also adds a news system showing articles based on quest progress and player choices. 33 corporate stocks with prices that shift based on game events.
- **Why:** One of the most iconic missing features from the E3 demos — a living, breathing corporate economy that responds to your actions. Destroy a Militech convoy and their stock drops; help Arasaka and their value rises. Creates a new layer of consequence awareness where your choices affect the market. 7,000+ endorsements, by the creator of RadioExt.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to game root. Stock market accessible via computer terminal or phone browser. Prices update dynamically based on quest completion and world events. Compatible with E3 Smart Windows for visual apartment integration.
- **Performance:** None

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Metro System
2. Wannabe Edgerunner - A simple Cyberpsychosis mod
3. Immersive Cyberware
4. Limited Fast Travel
5. Dark Future - Urban Survival Gameplay
6. Drug Dealer
7. Eviction Notice - Story-Driven Rent System
8. 1st Night City Bank
9. Stock Market and News System
10. Anti-Theft Measures

11. Immersive Meditations - Unmarked Locations
12. Filthy Access Points
13. Dedra's Truck Simulator (Convoy Job Delivery)
14. Immersive Odometer and Fuel System
15. NC Courier Jobs

06b - World Interaction

Goal: Make Night City's venues and spaces feel alive. Bar interactions, environmental interactivity, world reactivity, and citizen behaviors that turn static backdrops into lived-in locations.

Night City Interactions - Core

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/5519>
- **Version:** 4.1.0
- **Released:** 2026-03-10
- **Summary:** Framework for social interactions at bars and venues across Night City. Includes Edgerunners Tour meta quest (find locales from the anime). Required for NCI district addons.
- **Why:** Core living world mod — adds meaningful social activities with romance partners outside of quests. The Edgerunners Tour gives structure to exploration.
- **Conflicts:** Low — edits a few vanilla quest phase and world sector files. Compatible with most mods.
- **Dependencies:** ArchiveXL, Codeware, Native Settings UI, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. On first install, travel to H10 apartment to trigger setup popup. Supports alcoholic/non-alcoholic toggle via Native Settings UI -> Mods. District addons (Watson, Westbrook, Heywood, etc.) are separate mod pages.
- **Performance:** None

Simple Flashlight

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2913>
- **Version:** 2.5
- **Released:** 2023-10-01
- **Summary:** Adds a toggleable flashlight for dark areas. Configurable beam size, intensity, and falloff. Keyboard hotkey via CET bindings; controller uses hold D-Pad Left.
- **Why:** Practical immersion tool — Cyberpunk 2077 has no built-in flashlight despite many dark interiors. Essential for exploration without relying on gamma settings.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks, Native Settings UI
- **MO2 Notes:** Extract to `Cyberpunk 2077/bin/x64/plugins/cyber_engine_tweaks/mods/flashlight/`. Set hotkey via CET overlay -> Bindings. Configure via Native Settings UI -> Mods.

- **Performance:** None

Sit Anywhere

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7299>
- **Version:** Verify
- **Released:** 2023-02-11
- **Summary:** Adds the ability to sit on ledges, benches, stairs, and other surfaces across Night City with a simple interaction key.
- **Why:** A small but impactful immersion feature — Night City is full of places to sit, but vanilla only lets you sit in a handful of scripted locations. Enables organic downtime moments during exploration and adds a photography tool.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to CET plugins folder. Bind a key via CET overlay -> Bindings. Tag as **Root**.
- **Performance:** None

Immersive Bartenders

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7203>
- **Version:** 2.0.3
- **Released:** 2025-07-19
- **Summary:** Adds animated drink-pouring interactions at all bartenders across Night City. Ordering a drink now shows the bartender actually making and serving it.
- **Why:** Vanilla bartenders are static vendor menus — you buy a drink and it appears in your inventory. This makes the city's bars feel alive with proper pour-and-serve animations for every bartender including Claire (Afterlife) and Mateo (Lizzie's).
- **Conflicts:** None known. Fully compatible with Night City Interactions.
- **Dependencies:** None (standalone)
- **MO2 Notes:** Extract to game root. Saves the drink cost and buff effects. Includes a fix for Claire's garage quest step. Available as REDmod version.
- **Performance:** None

Consumable Animations

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26762>
- **Version:** Verify
- **Released:** 2025-12-24

- **Summary:** Adds eating and drinking animations when consuming food and beverages, replacing the instant inventory consumption with visible character actions.
- **Why:** Vanilla food/drink consumption is an instant menu action with no visual feedback. This adds immersive eating and drinking animations, making consumables feel like part of the world rather than stat buffs.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to game root. Works with all vanilla consumables. Tag as **Root**.
- **Performance:** None

Pet Your Cat

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6198>
- **Version:** 2.5.0
- **Released:** 2026-02-13
- **Summary:** Lets you pet the cats in V's apartments. Dogs too (in Dogtown). Works with all Apartment Cats mods and vanilla cats.
- **Why:** Cats are scattered across apartments and even appear in quests, but vanilla has no pet interaction. This adds the ability to reach out and connect with the game's animal companions — a small but meaningful immersion detail.
- **Conflicts:** Compatible with all Apartment Cats mods
- **Dependencies:** None (standalone)
- **MO2 Notes:** Extract to game root. Approach any cat and press the interaction prompt. Works with Nali, Elmo, Suzi, and all vanilla cats.
- **Performance:** None

NCI - Watson

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/14804>
- **Summary:** Partner drinks at Tom's Diner, Lizzie's Bar, and Afterlife. Solo drink spots included.
- **MO2 Notes:** Extract to game root. Requires NCI Core.

NCI - Westbrook

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/14805>
- **Summary:** Partner drinks at Lele Park, Dark Matter, and Xiao Xiongma. Solo drink spots included.
- **MO2 Notes:** Extract to game root. Requires NCI Core.

NCI - Heywood

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/14806>
- **Summary:** Partner drinks at Chubby Buffalo's, Dicky Twister, El Pinche Pollo, and El Coyote Cojo.
- **MO2 Notes:** Extract to game root. Requires NCI Core.

NCI - Pacifica and Badlands

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15138>
- **Summary:** Partner drinks at both Nomad Camps and Sunset Motel. Solo spots included.
- **MO2 Notes:** Extract to game root. Requires NCI Core.

NCI - Santo Domingo

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19005>
- **Summary:** Partner drinks at Buryger, Red Dirt, Kenmore Diner, the Market, PieZ, and Capitan Caliente.
- **MO2 Notes:** Extract to game root. Requires NCI Core.

NCI - City Center

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21018>
- **Version:** 2.0.0
- **Released:** 2025-08-06
- **Summary:** Partner drinks at 7th Hell, Empathy, Memorial Park Patio, Port Cafe, and Downtown greenhouse. Plus 3 solo drinking spots. v2.0 overhauled all dialogs with drinks/leaving on the bar and conversations on the partner.
- **Why:** Completes the NCI district coverage — City Center is the only remaining district without its own addon. Partners: Judy, Panam, River, Kerry. Alcohol-free toggle supported.
- **Conflicts:** Gigs may temporarily block specific drinking spots until fully completed (e.g. An Inconvenient Killer blocks 7th Hell).
- **Dependencies:** Night City Interactions - Core (5519)
- **MO2 Notes:** Extract to game root. Requires NCI Core already installed. Popup confirms activation. Uninstall safely when not within ~50m of a City Center location.
- **Performance:** None

Night City Hangouts

These mods by The Digital Soul use the Native Interactions Framework to add interactive points (sit, lean, sleep, smoke) at key Night City venues. Each requires NIF and CET.

NCH - Lizzie's Bar

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21842>
- **Version:** 1.1
- **Released:** 2026-02-22
- **Summary:** Adds sit, lean, sleep, and smoke interactions throughout Lizzie's Bar. Works inside the Mox-operated BD club.
- **Why:** Modlist already includes Lizzie's Braindances — this adds physical interactivity to the same venue, making it a fully functional entertainment destination rather than a static backdrop.
- **Conflicts:** NPCs may occasionally block interactable areas when the bar is busy.
- **Dependencies:** Native Interactions Framework, CET. Recommends Lizzie's Braindances (already in modlist) and NCI Core (already in modlist).
- **MO2 Notes:** Extract to game root. Interactions placed via NIF in-game UI — no manual configuration needed.
- **Performance:** None

NCH - Jig Jig Street

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21730>
- **Version:** 2.0
- **Released:** 2026-02-22
- **Summary:** Adds sit, lean, sleep, and smoke interactions throughout Jig-Jig Street interiors and exteriors. v2.0 improved placement and interaction names.
- **Why:** Jig-Jig Street is Night City's red-light district but has no interactive elements in vanilla. Adding environmental interactions makes the area feel lived-in and explorable rather than a pass-through corridor.
- **Conflicts:** NPCs may block interactable areas at night when the district is most crowded.
- **Dependencies:** Native Interactions Framework, CET. Optional: Jig Jig Unleashed (16580) for tweaked version.
- **MO2 Notes:** Extract to game root. Two versions available: standard and tweaked (requires Jig Jig Unleashed).
- **Performance:** None

NCH - Aldecaldos Camps

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/24211>
- **Version:** 1.0
- **Released:** 2025-09-13

- **Summary:** Adds sit, lean, sleep, and smoke interactions to both Aldecaldo camps (pre- and post-move). Compatible with Night City Interactions.
- **Why:** The Aldecaldo camps are central to Panam's romance arc and the Nomad storyline. Adding interactivity makes these locations feel like lived-in communities rather than quest backdrops, complementing Panam Romanced Enhanced.
- **Conflicts:** NPCs may block interactable areas.
- **Dependencies:** Native Interactions Framework, CET. Recommends NCI Core (already in modlist).
- **MO2 Notes:** Extract to game root. Compatible with Night City Interactions — NCI handles camp visits separately.
- **Performance:** None

NCH - 7th Hell Club

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27752>
 - **Version:** 1.0
 - **Released:** 2026-02-22
 - **Summary:** Adds sit, lean, and smoke interactions to the 7th Hell Club — a small nightclub featured in character hangouts and NCI City Center partner drinks.
 - **Why:** 7th Hell is referenced by multiple mods already in the modlist (Dance Off, NCI City Center). Adding physical interactivity to this shared venue ties those systems together.
 - **Conflicts:** NPCs may block interactable areas, especially when the club is most crowded.
 - **Dependencies:** Native Interactions Framework, CET.
 - **MO2 Notes:** Extract to game root. Pairs well with Dance Off and NCI City Center for a complete 7th Hell experience.
 - **Performance:** None
-

Jacked In

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/27525>
- **Version:** 1.7.2a
- **Released:** 2026-02-13
- **Summary:** Netrunner chair minigame — activate netrunner chairs to breach systems with a risk/reward "Deep-Fry" mechanic. Consecutive successful breaches earn streak bonuses and netrunner XP. NCPD can trace failures. Optional Dark Future integration for nerve/energy penalties.
- **Why:** Netrunner chairs are scattered across apartments and modded locations as set dressing — this gives them actual gameplay purpose. The risk/reward system adds tension to every

hack: stack your streak for escalating rewards, but each breach brings you closer to a lethal trace. Complements the modlist's existing netrunner chair locations.

- **Conflicts:** None known
- **Dependencies:** Codeware, Mod Settings, redscript. Optional: Dark Future (#16300) for needs penalties. Supports modded chair locations (auto-detected).
- **MO2 Notes:** Extract to game root. Tag as **Root**. Highly configurable — adjust Deep-Fry risk accumulation, streak reset timing, NCPD trace difficulty, and chair usage thresholds. Seat switch bonus encourages moving between locations. Ice-baths reduce Deep-Fry gain. Tutorial available.
- **Performance:** None

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Night City Interactions - Core
2. Simple Flashlight
3. Sit Anywhere
4. Immersive Bartenders
5. Consumable Animations
6. Pet Your Cat
7. NCI - Watson
8. NCI - Westbrook
9. NCI - Heywood
10. NCI - Pacifica and Badlands
11. NCI - Santo Domingo
12. NCI - City Center
13. NCH - Lizzie's Bar
14. NCH - Jig Jig Street
15. NCH - Aldecaldos Camps
16. NCH - 7th Hell Club
17. Jacked In

06c - Leisure & Entertainment

Goal: Downtime activities. Gambling, arcade games, dancing, braintances, and amusement — things to do in Night City when you're not on a gig.

Gambling Props - Poker Chips and Playing Cards

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15229>
- **Version:** 1.0.0
- **Released:** 2024-07-01
- **Summary:** 3D model assets for poker chips and playing cards used by the Playable Roulette and Playable Blackjack gambling systems.
- **Why:** Required dependency for Playable Roulette and Playable Blackjack — provides the visual chip and card assets needed for the gambling UI animations.
- **Conflicts:** None known
- **Dependencies:** None (asset-only mod)
- **MO2 Notes:** Extract to game root. Install BEFORE Playable Roulette and Playable Blackjack. Asset-only — no configuration needed.
- **Performance:** None

Playable Roulette - Gambling System

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15450>
- **Version:** 1.1.3
- **Released:** 2026-06-13
- **Summary:** Adds fully playable roulette tables with animated wheel, ball physics, chip system, and immersive UI at locations including Ho-Oh Bar and Tyger Claws underground casino.
- **Why:** Night City has casinos and gambling dens that are purely decorative in vanilla. This makes them functional minigames, adding an immersive side activity and optional money sink that fits the "no cheat" philosophy (configurable bet limits).
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Gambling Props - Poker Chips and Playing Cards, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. Configure via CET overlay. Do NOT save/load during active play — chips will be lost. Install after Gambling Props. Phantom Liberty required for full sound effects.
- **Performance:** Light (CET-based UI only during play)

Perfect Vanilla - Playable Roulette Fix

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/29866>
- **Version:** 1
- **Released:** 2026-05-21
- **Summary:** Over a dozen bug fixes for Playable Roulette: fixes wheel disappearing on save load, speeds up chip animation, caps max bet at 1,000, disables save-scumming in casino, and silences repetitive dealer dialogue.
- **Why:** Playable Roulette has several persistent bugs (vanishing wheel, slow chip handling, repetitive NPC dialogue) that detract from the experience. This fix mod resolves them all while adding vanilla-friendly polish like round-end notifications.
- **Conflicts:** Requires Playable Roulette (15450). Overwrites some of its files — install after.
- **Dependencies:** Same as Playable Roulette. Files overwrite the base mod's.
- **MO2 Notes:** Extract to game root, overwrite Playable Roulette files. Install AFTER Playable Roulette. Max bet capped at 1,000 eddies per round to prevent money farming.
- **Performance:** None

Playable Blackjack - Gambling System

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19575>
- **Version:** 1.1.4
- **Released:** 2025-12-11
- **Summary:** Adds playable blackjack with animated card dealing, randomized shuffles, chip management, and a live hand calculator. Located at Ho-Oh Bar in Kabuki.
- **Why:** Complements Playable Roulette with a second casino game. Blackjack with proper card mechanics gives players another immersive gambling option in Night City, reinforcing the living-world feel.
- **Conflicts:** Known conflict with Immersive First Person — disable via CET before sitting at the table.
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Gambling Props - Poker Chips and Playing Cards, Native Settings UI, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. Configure via Native Settings UI -> Mods. Do NOT save/load during active play. Install after Gambling Props.
- **Performance:** Light (CET-based UI only during play)

Playable Arcade Machines

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4213>
- **Version:** 1.4
- **Released:** 2024-02-15

- **Summary:** Makes arcade machines throughout Night City playable — approach and interact to play classic-style minigames.
- **Why:** Arcade machines are decorative set-dressing in vanilla despite being scattered across bars and apartments. Making them playable adds a fun downtime activity that fits Night City's cyberpunk aesthetic.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to game root. Configure via CET overlay. Approach any arcade machine and interact to play.
- **Performance:** None

Lizzie's Braindances

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/11077>
- **Version:** 1.67.1
- **Released:** 2023-11-27
- **Summary:** Adds a braindance viewing menu to Lizzie's Bar with characters and location selection. Fully integrated into the native quest system.
- **Why:** Lizzie's Bar is iconic as a BD club but has no functional braindances in vanilla. This restores the intended purpose of the venue, making it a real entertainment destination with immersive BD viewing.
- **Conflicts:** None known — built in native quest system, no file conflicts
- **Dependencies:** None (standalone — uses native game quest system)
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Access menu in Lizzie's Bar main room. Select performer and location.
 - Beta stage — limited character selection, more in future updates.
- **Performance:** None

Dance Off

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10615>
- **Version:** 1.1.0
- **Released:** 2024-12-22
- **Summary:** Adds the option to dance with romance partners at club dance floors. Judy, Panam, River, Kerry, Jackie, Reed, Alex, Johnny, and So Mi are all potential dance partners across Totentanz, Riot, Empathy, 7th Hell, and Heavy Hearts Club.
- **Why:** Clubs have dance floors but no partner dancing. This adds a meaningful social activity that complements the existing bar/drinking systems and strengthens partner relationships outside of quests and apartment hangouts.

- **Conflicts:** None. Fully compatible with Immersive Bartenders (shared logic prevents animation issues).
- **Dependencies:** ArchiveXL, RED4ext. Phantom Liberty optional (for Heavy Hearts Club, Reed/Alex/So Mi).
- **MO2 Notes:** Extract to game root. File goes to `archive/pc/mod/`. Visit any club dance floor, choose "Dance with someone," and select a partner. Movement (WASD) ends the dance.
- **Performance:** None

Roller Coaster Enhanced

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/14617>
- **Version:** 1.1.3
- **Released:** 2026-03-31
- **Summary:** V can ride the Pacifica roller coaster with Songbird, Judy, Panam, or Kerry after repairing it. Partner messaging and waiting system with full date-style experience. Johnny returns for solo rides.
- **Why:** The Pacifica coaster is a memorable one-time quest moment. This makes it a repeatable activity with romance partners, adding a unique date option that rewards exploration. Updated for Tower/PL ending PONR.
- **Conflicts:** None known. River not supported (body type incompatible with coaster animations).
- **Dependencies:** ArchiveXL, Deception Quest Core, RED4ext. Phantom Liberty optional (for Songbird).
- **MO2 Notes:** Extract to game root. Activate by visiting H10 apartment once. Fix and ride the coaster first if not already repaired. Partner invites unlock after befriending/romancing them.
- **Performance:** None

Licks Club

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/28068>
- **Version:** 1.0
- **Released:** 2026-01-15
- **Summary:** Adds an adult entertainment club venue accessible in Night City, with atmospheric interior and ambient scenes fitting the city's decadent nightlife.
- **Why:** Night City's nightlife includes adult venues as part of its identity — the Afterlife, Lizzie's Bar, and Clouds are all core to the world. This adds another layer of the city's entertainment district, serving world authenticity.
- **Conflicts:** None known. Check compatibility with Night City Interactions and NCH addons.
- **Dependencies:** ArchiveXL, Codeware
- **MO2 Notes:** Extract to game root. May have PG/mature content toggle. Tag as **Root**.

- **Performance:** Light
-

Add-ons — NCI District Mods

These are companion mods for **Night City Interactions - Core** that add social drinking spots with romance partners in each district. Each requires NCI Core and is compatible with all others.

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Gambling Props - Poker Chips and Playing Cards
2. Playable Roulette - Gambling System
3. Perfect Vanilla - Playable Roulette Fix
4. Playable Blackjack - Gambling System
5. Playable Arcade Machines
6. Lizzie's Braindances
7. Dance Off
8. Roller Coaster Enhanced
9. Licks Club

07 - Quests & Stories

Goal: New quests, expanded storylines, additional gigs, and narrative content. Quality over quantity -- quests must feel like they belong in Night City.

Deceptious Quest Core

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7831>
- **Version:** 3.2.0
- **Released:** 2026-06-28
- **Summary:** Quest framework that hooks into V's H10 apartment. Required for many quest and romance mods (Romanced Enhanced series, Gone Away, etc.). No content alone.
- **Why:** Foundation for the entire deceptious quest ecosystem. Installing this enables all dependent quest mods to activate from a single trigger (enter H10 apartment).
- **Conflicts:** None known. 55+ mods use this framework.
- **Dependencies:** ArchiveXL, Codeware, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. Activate new quest mods by leaving/re-entering H10 apartment. Do not rename the archive file.
- **Performance:** None

Undermine Quest Series (UQS)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/17186>
- **Version:** 1.4a
- **Released:** 2025-08-11
- **Summary:** Quest framework for the Song So Mi romance story arc. Handles quest launching, localization, and shared logic across the Undermine quest series (Possibilities, The Ransom, Into the Depths, Romantic Hangout). No content alone.
- **Why:** Required by the Songbird romance quest chain. Same role as Deceptious Quest Core but for the Undermine ecosystem — enables plug-and-play quest activation without manual resets.
- **Conflicts:** None known.
- **Dependencies:** ArchiveXL, RED4ext, redscript, TweakXL, Phantom Liberty
- **MO2 Notes:** Extract to game root. Tag as **Root**. Install after Deceptious Quest Core. New quests auto-activate on install — no apartment visit needed.
- **Performance:** None

Cutscene Weapon Swapper

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/20743>
- **Version:** 1.4.1
- **Released:** 2025-04-20
- **Summary:** Replaces default placeholder weapons in cutscenes with your actual equipped weapon. Supports 12+ scenes including The Pickup, The Heist, Ghost Town, and Phantom Liberty.
- **Why:** Minor but persistent immersion breaker fixed — no more generic pistols in story moments where V should be holding their actual gear.
- **Conflicts:** None known
- **Dependencies:** Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Files go to `r6/scripts/`. Selects last used weapon first, then weapon slots, then inventory.
- **Performance:** None

Immersive Fixers

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15460>
- **Version:** 1.4.1
- **Released:** 2024-06-24
- **Summary:** Makes fixer introductions less abrupt and more immersive — no more cold-call phone rings the moment you enter a new district. Integrates fixer meetups into the natural flow of exploration.
- **Why:** Vanilla fixer introductions feel gamey — a phone rings and suddenly you know a fixer you've never met. This smooths the introduction into something that feels like it belongs in Night City's diegetic world.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Files go to `archive/pc/mod/`. Works automatically — no configuration needed.
- **Performance:** None

Aurore Romanced (Lady Marmalade)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/11097>
- **Version:** 1.2.6
- **Released:** 2026-05-08
- **Summary:** Adds a small quest to "romance" Aurore Cassel after the events at the Black Sapphire. Works for both Masc and Fem V (Fem V has better animation support).
- **Why:** Aurore is a memorable Phantom Liberty character with no follow-up in vanilla — she vanishes after the Black Sapphire mission. This provides a narrative "what if" that adds role-

playing depth to a pivotal PL encounter. By Deceptious (same author as Quest Core and Romanced Enhanced series).

- **Conflicts:** None known
- **Dependencies:** ArchiveXL, TweakXL, Deceptious Quest Core
- **MO2 Notes:** Extract to game root. Quest triggers after leaving Black Sapphire — use the hotel key Aurore slips you. Quest fails if not completed before tracking the twins' car to Dogtown. Resettable via Deceptious Quest Core Utilities. TweakXL yml goes in `r6/tweaks/`.
- **Performance:** None

The Kidnapping of Panam

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/17329>
- **Version:** 2.1.0
- **Released:** 2024-10-01
- **Summary:** Panam has gone missing. A cryptic message, a deadly ambush at the Sunset Motel, and a trail leading into Maelstrom territory. V races against time to rescue her from a chromed-up boss with a personal vendetta.
- **Why:** Adds a high-stakes narrative quest centered on Panam with full voice acting, holocalls, and horror elements. Supports both male and female V with different activation conditions. 1,100+ endorsements.
- **Conflicts:** None known. Compatible with Panam Romanced Enhanced.
- **Dependencies:** ArchiveXL, RED4ext, TweakXL, Phantom Liberty
- **MO2 Notes:** Extract to game root. For male V: requires first dating quest completed with no active dating quest. For female V: quest activates automatically with a 24-hour delay. NG+ compatible.
- **Performance:** None

High Stakes Quest

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/18023>
- **Version:** 1.3.2
- **Released:** 2024-12-01
- **Summary:** A vehicle-based quest featuring holocalls from Regina, a timed driving phase with autosaves, and a full narrative with Johnny dialogue. Vehicle durability tracking with popups.
- **Why:** Adds a driving-focused quest that uses Night City's vehicle mechanics as core gameplay rather than just transport. Video holocalls add production value. Multiple community translations available.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL, Phantom Liberty

- **MO2 Notes:** Extract to game root. Quest includes autosaves every 45 seconds during the drive phase. Uses AI-generated dialogue alongside vanilla Johnny lines. 9 other mods use this as a dependency.
- **Performance:** None

New Quest - Californication

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7833>
- **Version:** 3.1.2
- **Released:** 2025-08-18
- **Summary:** Adds a new quest for romanced Judy. Requires Judy staying in NC and positive conversation with Judy's Abuela.
- **Why:** Extends Judy's narrative after her romance arc concludes. Requires specific story conditions, making it a natural continuation rather than a disconnected side quest.
- **Conflicts:** None known
- **Dependencies:** Judy Romanced Enhanced (#4508), Deceptious Quest Core
- **MO2 Notes:** Extract to game root. Requires Judy romanced and staying in Night City (Star ending incompatible). Requires positive Abuela conversation outcome.
- **Performance:** None

New Quest - Encore

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/8413>
- **Version:** 3.2.1
- **Released:** 2023-05-27
- **Summary:** Adds a new quest for romanced Panam. Requires Panam Romanced.
- **Why:** Extends the Panam romance with additional narrative content beyond the base game and Romanced Enhanced schedule.
- **Conflicts:** None known
- **Dependencies:** Panam Romanced Enhanced (#4626), Deceptious Quest Core
- **MO2 Notes:** Extract to game root. Requires Panam romanced. **Compatibility note:** Last updated May 2023 (pre-2.0). Verify 2.31 compatibility before installing — test in isolation first.
- **Performance:** None

New Quest - Hot Fuzz

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7832>
- **Version:** 3.1.4
- **Released:** 2025-08-18

- **Summary:** Adds a new quest for romanced Judy with intimate narrative content. Requires Judy staying in NC and positive Abuela conversation.
- **Why:** Adult companion quest to Californication — adds relationship depth for Judy romancers who want more narrative content after the main romance arc.
- **Conflicts:** None known
- **Dependencies:** Judy Romanced Enhanced (#4508), Deceptious Quest Core
- **MO2 Notes:** Extract to game root. Same prerequisites as Californication. Install after Californication in load order.
- **Performance:** None

8ug8ear Romance

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6313>
- **Version:** 3.01
- **Released:** 2022-06-01
- **Summary:** 8ug8ear becomes a romanceable character. Receive messages, follow her quest, visit her apartment, and become intimate depending on choices.
- **Why:** 8ug8ear is an established character from the main story (rescued during the Sandra Dorsett mission). This gives her a proper narrative follow-up with branching intimacy choices.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. Requires completing the Sandra Dorsett rescue mission where you encounter 8ug8ear.
- **Performance:** None

Rita Wheeler Romanced

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/9191>
- **Version:** 3.3.1
- **Released:** 2025-08-18
- **Summary:** Adds a small romance/hookup quest with Rita Wheeler, the Mox bouncer at Lizzie's Bar. Includes intimacy scenes and dialogue.
- **Why:** Rita is a recognizable Night City character who's present throughout the game but has no interactivity beyond bar security. This gives her depth as a person rather than set dressing, fitting the modlist's goal of a living, decadent city where characters have agency.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. Quest becomes available after meeting Rita at Lizzie's Bar. Pairs with Rita Post-Romance Messages Addon in o8-Relationships & Romance for

ongoing contact.

- **Performance:** None

Arasoka Office Job - Counter-Intelligence Division

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/29054>
- **Version:** 1.2
- **Released:** 2026-05-01
- **Summary:** New questline involving Arasaka counter-intelligence work. Infiltrate corporate operations and uncover internal Arasaka secrets in a narrative-driven mission series.
- **Why:** Corporate intrigue is core to Cyberpunk's identity but the vanilla game focuses heavily on street-level stories. This quest adds the white-collar side of Night City — espionage, office politics, and corpo power plays — diversifying the quest portfolio.
- **Conflicts:** None known. Check compatibility with other quest mods that modify Arasaka-related world sectors.
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Test in isolation first to verify 2.31 compatibility.
- **Performance:** None

Taxi Work in Night City

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15624>
- **Version:** 0.4.6
- **Released:** 2024-07-01
- **Summary:** Adds a working taxi driver gameplay loop — pick up fares across Night City, navigate traffic, manage customer satisfaction, and earn eddies as a legitimate driver.
- **Why:** Adds a peaceful, immersive gameplay activity that contrasts with combat-heavy content. Taxi work lets players experience Night City from a different perspective — as a service worker navigating the streets — deepening the roleplay possibilities. Earns eddies through honest work, fitting the no-cheat philosophy.
- **Conflicts:** None known. Works alongside NC Courier Jobs and Dedra's Truck Simulator as part of the "working citizen" gameplay layer.
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. v0.4.6 is still in development — expect updates. Works with any vehicle, including modded vehicles.
- **Performance:** None

The Thin Blue Line

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/29274>

- **Version:** 1.0
 - **Released:** 2026-06-01
 - **Summary:** NCPD-focused gameplay mod adding police-related activities, interactions, and consequences. Walk the line between law enforcement and the streets.
 - **Why:** The NCPD is a major faction in Cyberpunk lore but vanilla interactions are limited to wanted levels. This mod expands police interactions into a gameplay system, adding moral choices and consequences that deepen the RPG experience.
 - **Conflicts:** Check compatibility with Immersive Fixers (#20808) — The Thin Blue Line handles NCPD/police, Immersive Fixers handles fixer-related behavior. Should be complementary but verify.
 - **Dependencies:** CET, ArchiveXL, Codeware
 - **MO2 Notes:** Extract to game root. Tag as **Root**. Tagged "Fair and balanced" — verify no cheat mechanics.
 - **Performance:** None
-

Song So Mi Romance Arc

These quests form a connected story arc by Undermine / Alyzandre, telling a post-Phantom Liberty romance with Songbird. They install as a sequential chain and require Undermine Quest Series (UQS) as their framework. All require sending Songbird to the moon in Phantom Liberty.

Possibilities

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/17185>
- **Version:** 1.6a
- **Released:** 2026-06-21
- **Summary:** First quest in the Song So Mi romance arc. Songbird survives and wants a meeting. PG content. New relationship texting system and full journal support.
- **Why:** Songbird's ending is one of the most emotionally impactful in Phantom Liberty but leaves her story unresolved. This series gives her a proper post-game narrative and is actively developed with frequent updates.
- **Conflicts:** None known
- **Dependencies:** Phantom Liberty, ArchiveXL, RED4ext, redscript, TweakXL, Undermine Quest Series
- **MO2 Notes:** Extract to game root. Requires sending Songbird to the moon. 14-day in-game wait after PL ending. Quest auto-starts via UQS. Repeatable (reset after completion).
- **Performance:** None

Romantic Hangout with So Mi

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/17263>
- **Version:** 1.2a
- **Released:** 2025-08-11
- **Summary:** Second quest — a repeatable hangout platform that facilitates the ongoing relationship with Songbird. Activities separated into PG and R-rated conversation sections. Content toggle controls visual state (default / non-nude lingerie / revealing lingerie / full nude).
- **Why:** Provides a persistent, recurring hangout that deepens the Songbird relationship between story quests. Blackwall Cyberdeck/Weapon crafting integration balances the Reed vs Songbird path. Banking system and planned Dark Future integration add gameplay substance beyond the hangout itself.
- **Conflicts:** None known
- **Dependencies:** Phantom Liberty, Undermine Quest Series, Possibilities
- **MO2 Notes:** Extract to game root. Persistent quest — auto-cycles every 4-5 days. Player controls content level via conversation menu choice (PG content at front, R-rated behind Sexualize Content option). 30-min real-time cooldowns at start and end.
- **Performance:** None

The Ransom

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/18055>
- **Version:** 1.2
- **Released:** 2026-06-25
- **Summary:** Third quest in the arc. Features a boss fight and combat zone area. Full voice over dialog. PG romantic ending scene.
- **Why:** Raises the stakes with combat gameplay while advancing the Songbird narrative. Active development with localization and optimization updates.
- **Conflicts:** None known
- **Dependencies:** Phantom Liberty, Possibilities, Romantic Hangout with So Mi, Undermine Quest Series, ArchiveXL, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Chapel key card required — prologue skippers may need to find one. Boss fight area (re-populated if boss already defeated). Long real-time dialog section after combat — do not leave the area.
- **Performance:** None

Into the Depths

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19361>
- **Version:** 1.0
- **Released:** 2025-12-08

- **Summary:** Fourth quest in the arc (Phase 1 of 3). Branching dialog with consequences — 3 "no" answers fail the quest. Setup tasks to prepare for the story's next phase.
- **Why:** Continues the Songbird narrative with meaningful dialog choices. Phase 1 is functional and stable; Phases 2 (dialog/driving) and 3 (new area/combat) are in active development.
- **Conflicts:** None known
- **Dependencies:** Phantom Liberty, Possibilities, Romantic Hangout with So Mi, The Ransom, Undermine Quest Series
- **MO2 Notes:** Extract to game root. Phase 1 only — remaining phases will be free updates. Quest starts via text message from So Mi. Answer options: Yes (begin), No (pause 7 days, new dialog), Wait (reset, try again in 7 days). Phase 3 will lock V into the quest until conclusion.
- **Performance:** None

Night City Allies - Be A Fixer

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/28572>
- **Version:** 2.1
- **Released:** 2026-06-27
- **Summary:** Send mercs on missions via a management UI — deploy fixer crews to conduct intel gathering, cargo theft, cargo sales, and black market operations. Includes Black Market Intel (BMI) currency for purchasing iconic weapons. Dynamic car theft missions with bomb timers and GPS tracking.
- **Why:** Adds a management layer to the mercenary fantasy — you're no longer just a solo operator, but a fixer running operations. The BMI currency and black market weapon system gives iconic weapons a secondary acquisition path beyond world exploration. Cargo economy ties meaningfully to the existing Much Better Eddies and 1st Night City Bank systems.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks, Native Settings UI, Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Configure via Native Settings UI. Merc missions have configurable success rates and rewards. Car theft dynamic missions trigger randomly — adjustable frequency via settings.
- **Performance:** Light (UI-based management, occasional dynamic spawns)

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Deceptious Quest Core
2. Undermine Quest Series (UQS)

3. Cutscene Weapon Swapper
4. Immersive Fixers
5. Aurore Romanced (Lady Marmalade)
6. The Kidnapping of Panam
7. High Stakes Quest
8. New Quest - Californication
9. New Quest - Encore
10. New Quest - Hot Fuzz
11. Sugarbear Romance
12. Rita Wheeler Romanced
13. Arasaka Office Job - Counter-Intelligence Division
14. Taxi Work in Night City
15. The Thin Blue Line
16. Night City Allies - Be A Fixer
17. Possibilities
18. Romantic Hangout with So Mi
19. The Ransom
20. Into the Depths

Note: Deceptive Quest Core is also required by mods in o8-Relationships & Romance (Gone Away). Songbird romance arc (items 16-19) requires sending Songbird to the moon in Phantom Liberty. New Quest - Encore requires 2.31 compatibility verification (last updated pre-2.0). Rita Wheeler Romanced is required by Rita Post-Romance Messages Addon in o8-Relationships & Romance.

08 - Relationships & Romance

Goal: Meaningful relationships. Expanded romance systems (M/F and F/F options), companion interactions, friendship mechanics, text messages, dates, and relationship progression.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Judy Romanced Enhanced

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4508>
- **Version:** 2.4.2
- **Released:** 2025-10-27
- **Summary:** Gives Judy a daily schedule post-romance (sleep, shower, eat, kitchen, window). Hug and kiss options. Phantom Liberty dialogue reactions.
- **Why:** Transforms Judy from a static window fixture into a living character with daily routines. Full lip-sync for all VO languages.
- **Conflicts:** Incompatible with standalone Hugs - Judy mod (features are included here). Compatible with all other Romanced Enhanced mods.
- **Dependencies:** ArchiveXL (for shower features addon)
- **MO2 Notes:** Extract to game root. Hug/kiss prompts appear after romancing Judy. Optional shower features via separate addon.
- **Performance:** None

Panam Romanced Enhanced

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4626>
- **Version:** 2.6.1
- **Released:** 2025-10-21
- **Summary:** Panam daily schedule at Aldecaldos camp (drink, eat, phone, shower, sleep). Hug and kiss options. Privacy curtains for shower area.
- **Why:** Fixes Panam's buggy bed and adds lifelike routines. Saul's behavior improved too.
- **Conflicts:** Compatible with all other Romanced Enhanced mods. Edits common files with River's mod but both are updated for compatibility.
- **Dependencies:** ArchiveXL (for privacy curtains), Codeware, RED4ext
- **MO2 Notes:** Extract to game root. Schedule activates after romancing Panam and moving to new camp.
- **Performance:** None

River Romanced Enhanced

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4870>
- **Version:** 2.6.0
- **Released:** 2026-05-10
- **Summary:** River daily schedule at trailer (drink, eat, workout, shower, sleep). Joss's kids get proper schedules (play, sleep, greet V). Hug and kiss options.
- **Why:** Fixes River's broken post-quest behavior where kids stared at walls and River couldn't decide whether to sit or stand.
- **Conflicts:** Edits River's .app file — may conflict with custom River appearance mods.
- **Dependencies:** ArchiveXL, Codeware. Recommended: Gone Away - Better Partner Suspended Behaviour.
- **MO2 Notes:** Extract to game root. Hug/kiss available if romanced (not one-night-stand).
- **Performance:** None

Kerry Romanced Enhanced

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4990>
- **Version:** 2.2.2
- **Released:** 2026-05-10
- **Summary:** Kerry daily schedule at mansion (guitar, lounge, drink, eat, shower, sleep). Request 5 different playable songs. Hug and kiss options.
- **Why:** Kerry felt lifeless post-romance — now he plays guitar on demand, follows a schedule, and has proper greetings.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL (optional, for lighting fix), Codeware (optional)
- **MO2 Notes:** Extract to game root. Guitar songs available regardless of romance; hugs/kiss require relationship.
- **Performance:** None

Romance Hangouts Enhanced

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/11590>
- **Version:** 2.5.1
- **Released:** 2026-06-04
- **Summary:** Expands patch 2.1 romance hangouts with repeatable cuddle/kiss/dance actions for all partners across H10, The Glen, Corpo Plaza, and Japantown apartments.
- **Why:** Vanilla hangouts are limited to once-per-visit interactions. This makes them repeatable and adds slow/fast dance options, non-canon romance support, and partner messaging logic fixes.

- **Conflicts:** Compatible with Hangout Romances mod (v1.02+). Required by I Really Want To Stay At Your House mods.
- **Dependencies:** ArchiveXL, RED4ext
- **MO2 Notes:** Extract to game root. Works automatically — no configuration needed. Features activate when partner visits your apartment.
- **Performance:** None

I Really Want To Stay At Your House - Judy

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/8753>
- **Version:** 3.6.0
- **Released:** 2026-06-01
- **Summary:** Judy stays at V's apartments (H10, Glen, Japantown, Corpo Plaza) for 2-day visits with full Romanced Enhanced schedule. Choose between longer stays or shorter 2.1-style hangouts via text message.
- **Why:** Vanilla romance hangouts end when V sleeps or leaves — Judy disappears back to her apartment. This lets her truly live with V for extended periods, with daily routines, showering, eating, sleeping, and window-gazing. Hug/kiss options included.
- **Conflicts:** Compatible with all Romanced Enhanced mods. Compatible with Apartment Cats: Japantown (shares scene files).
- **Dependencies:** ArchiveXL, RED4ext, Romance Hangouts Enhanced, Romanced Enhanced Showers Feature
- **MO2 Notes:** Extract to game root. First visit is mandatory short hangout; subsequent messages offer [Longer Stay?] or [Shorter Visit?] choice. Reset command:

```
Game.SetDebugFact("deceptious_stay", 99) .
```

Uninstall only when Judy is not visiting.
- **Performance:** None

Judy Flirts on Dates

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/13690>
- **Version:** 1.1
- **Released:** 2025-08-24
- **Summary:** Replaces Judy's repetitive idle dialogue during apartment hangouts with warmer, more natural lines. Targets the three most grating repeated lines.
- **Why:** Judy's date dialogue ("Well? C'mon!", "Everything alright, V?") plays on a short loop that breaks immersion during extended hangouts. Replacing these with repurposed vanilla lines creates a smoother, more natural atmosphere.
- **Conflicts:** Anything modifying the same dialogue or subtitles in the affected apartments
- **Dependencies:** Romance Hangouts Enhanced v2.2.0+

- **MO2 Notes:** Extract to game root. Install AFTER Romance Hangouts Enhanced. Affects all apartments. Subtitle sync and lipsync may not be perfect.
- **Performance:** None

Gone Away - Better Partner Suspended Behaviour

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19412>
- **Version:** 1.1.1
- **Released:** 2026-03-31
- **Summary:** Partners disappear when "busy/suspended" (Romance Hangouts, quests) instead of standing frozen at home. Leaves a note explaining their absence.
- **Why:** Fixes the immersion-breaking sight of Judy/Panam/River/Kerry standing motionless when they're supposed to be elsewhere.
- **Conflicts:** None known. Fully compatible with all Romanced Enhanced mods.
- **Dependencies:** Deceitful Quest Core, ArchiveXL, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. Works for Judy/Panam immediately; requires Quest Core activation for Kerry/River.
- **Performance:** None

I Really Want To Stay At Your House - Panam

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/8775>
- **Version:** 3.5.1
- **Released:** 2026-06-24
- **Summary:** Panam stays at V's apartments (H10, Glen, Japantown, Corpo Plaza) for 2-day visits with full Romanced Enhanced schedule. Choose between longer stays or shorter 2.1-style hangouts via text message.
- **Why:** Companion to the already-installed Judy version. Completes the extended-stay experience for Panam romancers with daily routines and proper schedule.
- **Conflicts:** Compatible with all Romanced Enhanced mods and other IRWTSAYH mods. Compatible with Pet Your Cat (shares scene files).
- **Dependencies:** ArchiveXL, RED4ext, Romance Hangouts Enhanced, Romanced Enhanced Showers Feature
- **MO2 Notes:** Extract to game root. Same behavior as Judy version — first visit is mandatory short hangout; subsequent messages offer Long/Short stay choice. SFW without Showers Feature mod (v3.5.0+).
- **Performance:** None

I Really Want To Stay At Your House - Kerry

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/8806>

- **Version:** 3.5.0
- **Released:** 2026-06-02
- **Summary:** Kerry stays at V's apartments for 2-day visits with full schedule including guitar playing, lounging, eating, drinking, and showering. Long/Short stay choice via text message.
- **Why:** Companion to the already-installed Judy version. Completes the set for Kerry romancers with his full Romanced Enhanced schedule in V's apartments.
- **Conflicts:** Compatible with all Romanced Enhanced mods and other IRWTSAYH mods.
- **Dependencies:** ArchiveXL, RED4ext, Romance Hangouts Enhanced, Romanced Enhanced Showers Feature
- **MO2 Notes:** Extract to game root. SFW without Showers Feature mod (v3.5.0+). Kerry's schedule includes guitar playing sessions. Same Long/Short stay choice system.
- **Performance:** None

I Really Want To Stay At Your House - River

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/8826>
- **Version:** 3.5.0
- **Released:** 2026-06-02
- **Summary:** River stays at V's apartments for 2-day visits with full schedule. Long/Short stay choice via text message. Completes the full IRWTSAYH set across all 4 romance partners.
- **Why:** Companion to the already-installed Judy version. Completes the extended-stay experience for River romancers.
- **Conflicts:** Compatible with all Romanced Enhanced mods and other IRWTSAYH mods.
- **Dependencies:** ArchiveXL, RED4ext, Romance Hangouts Enhanced, Romanced Enhanced Showers Feature
- **MO2 Notes:** Extract to game root. SFW without Showers Feature mod (v3.5.0+). Same Long/Short stay choice system as other partners.
- **Performance:** None

Romanced Enhanced Showers Feature

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23074>
- **Version:** 1.0.0
- **Released:** 2025-08-18
- **Summary:** Addon that enables the NSFW showering routine/feature for all four Romanced Enhanced mods (Judy, Panam, Kerry, River).
- **Why:** Required dependency for all four I Really Want To Stay At Your House mods. Enables the shower schedule activity that completes the daily routine immersion for partner characters.
- **Conflicts:** None known

- **Dependencies:** Judy Romanced Enhanced, Panam Romanced Enhanced, Kerry Romanced Enhanced, or River Romanced Enhanced (at least one required). ArchiveXL.
- **MO2 Notes:** Extract to game root. Tag as **Root**. Works automatically with Romanced Enhanced mods. IRWTSAYH mods are SFW without this mod — install to enable shower features.
- **Performance:** None

Post-Romance Delivery System (Judy)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21496>
- **Version:** 4.0
- **Released:** 2025-06-01
- **Summary:** After romancing Judy, receive randomized text messages, gifts, and physical packages at V's apartment. Dark Future compatibility. UI interaction prompts.
- **Why:** Keeps the Judy romance alive post-story with ongoing contact. Physical packages at your door add tangible, world-grounded reward that fits the living world pillar.
- **Conflicts:** None known. Dark Future compatible.
- **Dependencies:** ArchiveXL, Cyber Engine Tweaks, TweakXL
- **MO2 Notes:** Extract to game root. Triggers after Judy romance is locked in. Messages arrive randomly during gameplay, not on a fixed timer.
- **Performance:** None

Post-Romance Delivery System (Panam)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21689>
- **Version:** 4.1
- **Released:** 2025-07-14
- **Summary:** After romancing Panam, receive randomized text messages, gifts, and physical packages at V's apartment. Dark Future compatibility. UI interaction prompts.
- **Why:** Same as Judy version — ongoing post-romance contact that deepens the relationship rather than letting it go silent after the final quest.
- **Conflicts:** None known. Dark Future compatible.
- **Dependencies:** ArchiveXL, Cyber Engine Tweaks, TweakXL
- **MO2 Notes:** Extract to game root. Triggers after Panam romance. Physical packages appear at apartment door.
- **Performance:** None

Post-Romance Delivery System (Kerry)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21420>

- **Version:** 3.2
- **Released:** 2025-05-01
- **Summary:** After romancing Kerry, receive randomized text messages, eddies, and crafting items. Dark Future compatibility. UI interaction.
- **Why:** Kerry has the least post-romance content in the current modlist. This fills a gap with ongoing contact from a partner who otherwise goes silent.
- **Conflicts:** None known. Dark Future compatible.
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to game root. Triggers after Kerry romance. Messages randomize between game cycles and reloads, never on a predictable timer.
- **Performance:** None

Post-Romance Delivery System (River)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21449>
- **Version:** 3.3
- **Released:** 2025-05-01
- **Summary:** After romancing River, receive randomized text messages, buffs, and rewards. Dark Future compatibility. UI interaction.
- **Why:** River has limited post-romance content beyond the Romanced Enhanced schedule. Ongoing deliveries maintain relationship immersion.
- **Conflicts:** None known. Dark Future compatible.
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to game root. Triggers after River romance. Messages arrive randomly — not on a fixed schedule.
- **Performance:** None

Post-Romance Delivery System (Meredith)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23242>
- **Version:** 1.3
- **Released:** 2025-08-01
- **Summary:** After the Meredith Stout encounter, receive ongoing text messages. 65+ unique messages. Fixed overlapping message issue with Judy version.
- **Why:** Meredith is a memorable early-game encounter who vanishes from the story. This provides a diegetic continuation that makes her feel like a real person with ongoing interest in V, fitting the decadent corporate world of Night City.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks

- **MO2 Notes:** Extract to game root. Triggers after the Meredith encounter. Install alongside the other Post-Romance Delivery mods — author fixed message overlaps.
- **Performance:** None

Go on a Date (Panam)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26613>
- **Version:** 1
- **Released:** 2026-05-19
- **Summary:** Adds side romance dates with Panam triggered by phone messages, playing out as mini open-world side quests.
- **Why:** Complements the Panam Romanced Enhanced and IRWTSAYH Panam mods with outdoor date activities beyond apartment hangouts. Adds variety to Panam romance content.
- **Conflicts:** None known. Compatible with Romanced Enhanced mods.
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to game root. Dates trigger via phone message — not on a fixed timer.
- **Performance:** None

Judy's Voicemail

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21937>
- **Version:** 2.1
- **Released:** 2025-08-16
- **Summary:** Judy leaves voicemail messages when V is featured in NCPD news or wanted. Supports both masculine and feminine V voice.
- **Why:** Adds reactive relationship content — Judy notices when V makes headlines. Grounds the romance in the game world rather than isolating it to apartment scenes.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to game root. Works automatically when Judy romance is active and V gains wanted level or news coverage.
- **Performance:** None

Rita Post-Romance Messages Addon

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/30537>
- **Version:** 1
- **Released:** 2026-07-01
- **Summary:** Over 100 new messages and exclusive photo content from Rita Wheeler after completing her romance quest. Extends the post-romance contact for the Mox bouncer.

- **Why:** Extends the Rita Wheeler Romanced quest (#9191) with ongoing messaging content. Keeps a minor romance alive rather than a one-and-done encounter.
- **Conflicts:** None known
- **Dependencies:** Rita Wheeler Romanced (#9191, in 07-Quests & Stories)
- **MO2 Notes:** Extract to game root. Requires Rita Wheeler Romanced installed first. Messages trigger after completing the Rita quest.
- **Performance:** None

Hangout Romances

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/18972>
- **Version:** 1.08
- **Released:** 2025-11-26
- **Summary:** Adds a "Make Love" intimacy option to apartment hangouts after showering and cuddling with your partner. Well-integrated with the existing Romance Hangouts Enhanced flow.
- **Why:** Adds intimate moments to the existing hangout system in a way that follows naturally from shower and cuddle interactions. CET-configurable for content preferences (shorter scenes, moaning toggle, animation type, lights control). Created by the same author as Lizzie's Braindances.
- **Conflicts:** Explicitly compatible with Romance Hangouts Enhanced (v1.02+). May conflict with mods blocking or changing partner entities.
- **Dependencies:** Romance Hangouts Enhanced v2.1.1+
- **MO2 Notes:** Extract to game root. No config needed — activates automatically. CET commands available for customization: scene length, moaning toggle, animation gender (male/female/default), shorter Panam ending, time skip toggle, scene lights toggle. Ends with auto-sleep like vanilla hangouts.
- **Performance:** None

Non-Canon Romances Enhanced

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/20466>
- **Version:** 1.0
- **Released:** 2025-03-01
- **Summary:** Expands romance content with non-canon romance options, adding new dialogue, scenes, and relationship progression for characters outside the four main romance paths.
- **Why:** Expands the relationships pillar by giving players more romantic options with characters they connect with. Complements the existing romance enhanced mods (Panam #4626, Judy #21937, River #26746, Kerry #27698) by adding additional character depth.

- **Conflicts:** Verify compatibility with existing Romance Enhanced mods — non-canon characters should not conflict with main four romance NPCs.
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Install after the four main romance enhanced mods. Tag as **Root**.
- **Performance:** None

Pleasures of Night City - Sex Animations Library

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/22962>
- **Version:** 1.0
- **Released:** 2025-07-01
- **Summary:** Animation framework providing intimate scene animations used by other romance and relationship mods. Pure library — no standalone content.
- **Why:** Framework dependency for romance and relationship mods that need intimate scene animations. Serves the adult content pillar by providing the technical foundation for narrative-driven intimate content. No standalone scenes — content is provided by dependent mods.
- **Conflicts:** None known (animation library)
- **Dependencies:** ArchiveXL, RED4ext
- **MO2 Notes:** Extract to game root. Install before any mods that depend on it. Tag as **Root**. This is a framework library — it does nothing on its own.
- **Performance:** None

Responsive V

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/22694>
- **Version:** 1.0
- **Released:** 2025-06-01
- **Summary:** V reacts dynamically with contextual voice lines and animations to open-world events and Johnny's passenger-seat commentary while driving.
- **Why:** V is traditionally a mostly-silent protagonist outside of scripted scenes. This mod makes V feel like a reactive character who comments on the world around them and responds to Johnny's banter during drives, deepening the RPG experience and making V feel like a person rather than a camera. Requires Phantom Liberty.
- **Conflicts:** None known. Voice line additions, no quest edits.
- **Dependencies:** ArchiveXL, Codeware, redscript. Optional: Mod Settings. Requires Phantom Liberty DLC.
- **MO2 Notes:** Extract to game root. Install after Phantom Liberty. Configure via Mod Settings. Tag as **Root**.

- **Performance:** None
-

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Judy Romanced Enhanced
2. Panam Romanced Enhanced
3. River Romanced Enhanced
4. Kerry Romanced Enhanced
5. Romanced Enhanced Showers Feature
6. Romance Hangouts Enhanced
7. Judy Flirts on Dates
8. Gone Away - Better Partner Suspended Behaviour
9. I Really Want To Stay At Your House - Judy
10. I Really Want To Stay At Your House - Panam
11. I Really Want To Stay At Your House - River
12. I Really Want To Stay At Your House - Kerry
13. Pleasures of Night City - Sex Animations Library
14. Non-Canon Romances Enhanced
15. Responsive V
16. Hangout Romances
17. Post-Romance Delivery System (Judy)
18. Post-Romance Delivery System (Panam)
19. Post-Romance Delivery System (Kerry)
20. Post-Romance Delivery System (River)
21. Post-Romance Delivery System (Meredith)
22. Go on a Date (Panam)
23. Judy's Voicemail
24. Rita Post-Romance Messages Addon

Note: Requires **Deceptive Quest Core** from 07-Quests & Stories for Gone Away to work fully for Kerry/River. Hangout Romances requires Romance Hangouts Enhanced v2.1.1+. Rita Post-Romance Messages Addon requires Rita Wheeler Romanced (#9191) from 07-Quests & Stories.

09 - Collectibles & Exploration

Goal: More things to find and reasons to explore. Hidden items, collectathon expansions, secrets, easter eggs, and rewards for thorough exploration.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

DLC Liberation Protocol

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/12322>
- **Version:** 1.0.0
- **Released:** 2024-01-14
- **Summary:** Integrates Twitch & GOG exclusive items (Gwynbleidd, Scorch, Yasha, Black Unicorn, NUSA Infiltrator set, Witcher/GOG-themed clothing) into the world as discoverable loot and vendor items.
- **Why:** Exclusive promo items are normally locked behind Twitch drops or GOG connections that most players never see. This integrates them into the game world through treasure-hunt scenarios and clothing vendors, turning corporate exclusives into rewarding exploration finds.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. Four discovery locations (Black Unicorn in base game, others in Phantom Liberty zones). NUSA Infiltrator set sold at Stylishly in Heywood; Witcher/GOG items at Pacifica clothing shop.
- **Performance:** None

Extra Iconics

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15889>
- **Version:** 2.1.0
- **Released:** 2025-10-12
- **Summary:** 17 new iconic weapons with custom appearances, VFX, and original gameplay effects scattered across Night City at vendors, hidden locations, and quest areas.
- **Why:** Vanilla has a limited set of iconic weapons — this doubles the pool with handcrafted, lore-friendly weapons that have unique mechanics (plasma shotgun, sentient ghost blade, EMP thunderstrike LMG, etc.). Each weapon has a distinct playstyle and discovery method.
- **Conflicts:** Incompatible with standalone versions of included weapons (uninstall old versions first)

- **Dependencies:** ArchiveXL, Codeware, redscript, Trigger Mode Control, TweakXL
- **MO2 Notes:** Extract to game root. Files go to `r6/scripts/SeijaxIconics`, `r6/tweaks/SeijaxIconics`, and `archive/pc/mod/`. To uninstall, remove all three paths. Translations available as separate downloads. Item codes available in description for troubleshooting.
- **Performance:** Light (script-only, no runtime overhead)

Nomad Cache - New Iconic Weapons

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19234>
- **Version:** 1.0.1
- **Released:** 2025-01-31
- **Summary:** Three Nomad-themed iconic weapons with custom appearances and effects: Inferno-V8R (Warden LMG), Trailblazer (Satara tech shotgun), Tep  w (poison tomahawk). Purchased from Badlands vendors.
- **Why:** The Badlands and Nomad lifestyle are underrepresented in iconic weapons. These weapons have thematically appropriate mechanics (overheat, solar charging, rattler venom) that reward Nomad-style exploration of the Badlands.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, Trigger Mode Control (required for Trailblazer), TweakXL. Requires Phantom Liberty.
- **MO2 Notes:** Extract to game root. Weapons purchased from specific Badlands vendors. Optional files: Enhanced Cooling (disables self-burn), Hellhound (disables sprint cleanse). Alternate acquisition via Mr. Blue Eyes vendor mod (#22696) or CET commands.
- **Performance:** None

Mox Cache - New Iconic Weapons

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/20073>
- **Version:** 1.0.2
- **Released:** 2025-08-20
- **Summary:** Three Mox-themed iconic weapons: Sloppy Seconds (Guillotine SMG with chain bounces), Glitch Bitch (Achilles tech rifle with micro-taser debuff), and a secret third weapon. Found in Kabuki and Lizzie's Bar.
- **Why:** The Mox are a core Night City faction with zero iconic representation. These weapons have mechanically unique effects (ricochet chaining, embedded tasers) that fit the Mox's DIY, punk aesthetic.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL. Requires Phantom Liberty.

- **MO2 Notes:** Extract to game root. Sloppy Seconds looted from NCPD Scanner Hustle south of Kabuki Market. Glitch Bitch purchased from Lizzie's Bar bartender. Secret third weapon on Jig-Jig Street. Alternate acquisition via CET commands or Mr. Blue Eyes vendor.
- **Performance:** None

Card Collection - Treasure Hunt

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25445>
 - **Version:** 2
 - **Released:** 2025-12-01
 - **Summary:** 100 collectible Cyberpunk-universe themed cards hidden across Night City. Each card has unique artwork and provides rewards when found. Progress is tracked and saved.
 - **Why:** Adds a genuine collectathon layer to exploration — cards are hidden in the world, rewarding thorough exploration with artwork and in-game rewards. Simple dependencies and no performance impact make it an easy addition to the exploration pillar.
 - **Conflicts:** None known
 - **Dependencies:** ArchiveXL, Cyber Engine Tweaks, RED4ext, TweakXL
 - **MO2 Notes:** Extract to game root. v2 updated all illustrations with player and artist-submitted pictures. Safe to update mid-game (keeps progress). File size is heavy due to uncompromised image quality.
 - **Performance:** Light (asset-only, no runtime scripts beyond CET collection tracking)
-

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. DLC Liberation Protocol
2. Extra Iconics
3. Nomad Cache - New Iconic Weapons
4. Mox Cache - New Iconic Weapons
5. Card Collection - Treasure Hunt

10 - Appearance & Character

Goal: Character customization. Body mods, skin textures, hair, cyberware visuals, tattoos, and character creator presets. Visual-only -- no gameplay impact. World immersion mods that reflect Night City's decadent atmosphere are included when they serve authenticity rather than pure titillation.

8k-4k Skin Texture and Material

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/13537>
- **Version:** 2.0.1
- **Released:** 2026-05-28
- **Summary:** 8K and 4K skin textures for female and male characters. Includes skin material/shader improvements and head mesh replacer where needed. Light version and lower-res options available.
- **Why:** Supports the modlist's 4K baseline with high-resolution character textures. Multiple resolution options allow performance tuning. Actively updated.
- **Conflicts:** May conflict with other skin texture replacers or head mesh mods.
- **Dependencies:** None (standalone texture replacer)
- **MO2 Notes:** Extract to `archive/pc/mod/`. Choose resolution appropriate for your hardware — 4K version recommended for the modlist baseline.
- **Performance:** Light (higher VRAM usage for 8K variant)

Universal Skin Tone - Realistic Textures

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15426>
- **Version:** 1
- **Released:** 2024-11-05
- **Summary:** Comprehensive FemV texture rework covering head, body, arms, genitals, and nipple textures. 72 skin tones across diverse human skin types. Framework-agnostic — works with any VTK body mod.
- **Why:** Vanilla skin textures lack detail and range at 4K resolution. This provides 72 skin tones with realistic subsurface scattering, normal maps, and microdetails. 65 other mods depend on it — the standard for FemV skin textures.
- **Conflicts:** Other skin texture replacers for FemV. Must match skin tone selection between this and Realistic Complexion II head textures.
- **Dependencies:** VTK body mod (e.g., Vanilla HD, ANGEL, EBB)

- **MO2 Notes:** Extract to game root. Large file set (17 files). Choose matching skin tone across body and head textures. 4K recommended for the 4K baseline; 8K variant available but VRAM-intensive. Tag as **Root**.
- **Performance:** Light (4K); Moderate (8K)

Realistic Complexion II (for Universal Skin Tone)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15634>
- **Version:** 1
- **Released:** 2025-12-12
- **Summary:** Hand-painted FemV head color textures with 5 skin types and 6 base variants (72 tones total). Includes hand-sculpted face detail normal map in 4K or 8K.
- **Why:** Complements Universal Skin Tone with matching head textures and enhanced face detail (normal map/roughness). The hand-sculpted face detail adds realism that vanilla head meshes lack, visible even at 4K.
- **Conflicts:** Other FemV head texture mods. Must match skin tone with Universal Skin Tone body texture.
- **Dependencies:** Universal Skin Tone (#15426) — hard requirement. VTK head mesh (from Vanilla HD or similar).
- **MO2 Notes:** Extract to game root. Choose the same skin tone family (Pale/Fair/Vanilla/Tan/Brown/Dark) as the Universal Skin Tone body texture. 4K face detail recommended; 8K may cause stutter on lower VRAM. Tag as **Root**.
- **Performance:** Light (4K); Moderate (8K face detail)

NPCs Enhancement - Hyst Bodies

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/9887>
- **Version:** 1.0.2
- **Released:** 2025-08-16
- **Summary:** Custom body meshes and appearance reworks for select NPCs, including hair and outfit swaps alongside body enhancements.
- **Why:** Night City is a body-modification culture where cosmetic cyberware and body sculpting are normalized. This enhances select NPCs to reflect that world authenticity — not just the player character, but the citizens of a decadent, transhumanist city should reflect its values.
- **Conflicts:** May conflict with other mods altering the same NPC appearances.
- **Dependencies:** ArchiveXL
- **MO2 Notes:** Extract to archive folder. Affects specific NPCs only, not a global replacer.
- **Performance:** None

CET NPC Body Tweaks

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10458>
- **Version:** 2.2.5
- **Released:** 2022-01-01
- **Summary:** Female NPC body tweaks for breast and lower body areas via Cyber Engine Tweaks scripting.
- **Why:** Complements Hyst Bodies for a more comprehensive world-appropriate character appearance. CET-based approach means no file conflicts with ArchiveXL-based body mods.
- **Conflicts:** None known (CET script-based, no loose file overwrites)
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Extract to game root. Works via CET scripting — no archive conflicts.
- **Performance:** None

Gymfiend - Body Mod - Male V - VTK

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6423>
- **Version:** 1.4.2
- **Released:** 2025-11-10
- **Summary:** Muscular Male V body with full VTK support. Exclusive texture paths (not shared with NPCs). Includes VTK-supported head mesh, body, arms, and genitals with multiple muscle definition options.
- **Why:** Male V body customization is underserved compared to Fem V. Gymfiend provides a high-quality VTK body with exclusive texture paths (no NPC sharing), enabling tattoo and skin texture mod compatibility. 307 other mods use it as a dependency — a sign of ecosystem quality.
- **Conflicts:** Other Male V body mods. Compatible with skin texture and tattoo mods (VTK-supported).
- **Dependencies:** None (self-contained VTK body)
- **MO2 Notes:** Extract to game root. Multiple muscle definition options available in files. VTK head mesh included in separate file — install separately. Tag as **Root**.
- **Performance:** None

Citizen Breast Physics

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21520>
- **Version:** 1.2.2
- **Released:** 2025-05-15
- **Summary:** Adds breast physics to most female NPCs using ArchiveXL patching. Does not overwrite any .app or .ent files — entirely conflict-free approach.

- **Why:** World authenticity mod — adds physical presence and motion to NPCs that matches the detailed visual standard of the modlist. The ArchiveXL patching approach means zero file conflicts, making this a safe addition.
 - **Conflicts:** None (uses ArchiveXL patching, no file overwrites)
 - **Dependencies:** ArchiveXL
 - **MO2 Notes:** Extract to game root. No file conflicts by design — safe to install alongside any other appearance mod.
 - **Performance:** None
-

Songbird's New Look REMASTERED

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15651>
 - **Version:** 1.01
 - **Released:** 2024-07-09
 - **Summary:** Comprehensive Songbird head mesh overhaul with custom 4K textures. 24,000+ vertices on the mesh. Available in standard and lip filler versions.
 - **Why:** Songbird is a central character in the modlist's Phantom Liberty quest content. This 4K-quality visual remaster ensures she matches the modlist's 4K baseline and looks her best throughout the Songbird romance quest arc.
 - **Conflicts:** Any mod changing Songbird's head mesh. Compatible with hair/clothing mods. Cannot have textures overwritten separately (authored for this specific mesh).
 - **Dependencies:** None (standalone .archive install)
 - **MO2 Notes:** Extract to `archive/pc/mod/`. Pure mesh/texture replacer — no scripts, survives game updates. Two file versions available: standard and lip filler. Install only one.
-

Hair Color Profiles CCXL

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19115>
- **Version:** 1.02
- **Released:** 2025-01
- **Summary:** Adds new hair color profiles to the character creator via the Community Color eXtended Library (CCXL) framework, expanding the range of natural and cyberpunk hair colors.
- **Why:** Character customization is limited in vanilla. Adding more hair color options via CCXL framework enables more diverse character creation without file conflicts. Serves the appearance pillar.
- **Conflicts:** None known (CCXL-based, no file overwrites)
- **Dependencies:** Community Palette Project (CCXL framework, already in modlist)

- **MO2 Notes:** Extract to game root. Requires CCXL framework. Tag as **Root**.
- **Performance:** None

Wolfcut Hair Collection - CCXL

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/16697>
- **Version:** 2.0
- **Released:** 2024-09
- **Summary:** Adds wolfcut hairstyle variants for Fem V via CCXL framework. Includes multiple length and styling options.
- **Why:** Expands Fem V hairstyle options with a popular modern cut. CCXL-based means no file conflicts. Serves character customization depth.
- **Conflicts:** None known (CCXL-based)
- **Dependencies:** Community Palette Project (CCXL framework, already in modlist)
- **MO2 Notes:** Extract to game root. Fem V only. Requires CCXL framework. Tag as **Root**.
- **Performance:** None

Beanie's CCXL Salon - 21 Fem V Hairstyles

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19191>
- **Version:** 1.3
- **Released:** 2025-02-10
- **Summary:** 21 standalone FemV hairstyles (no replacers) with CCXL hair profile compatibility. Uses vanilla hair cards for Preem Hair compatibility.
- **Why:** Expands FemV hairstyle options significantly with standalone hairs that don't replace any vanilla slots. CCXL-compatible for future hair profile expansion. Simple drag-and-drop install.
- **Conflicts:** None known. Cannot use with mods that replace vanilla hair cards if those differ from vanilla.
- **Dependencies:** None (standalone). Optional: Community Palette Project (CCXL framework) for hair profiles.
- **MO2 Notes:** Extract to game root. Hairs appear after vanilla numbered hairstyles in the character creator. Compatible with Preem Hair (uses vanilla cards). Tag as **Root**.
- **Performance:** None

EKT Custom Character Creator - FEMV ONLY

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/12807>
- **Version:** 1.10
- **Released:** 2024-02

- **Summary:** Enhanced character creator for Fem V with expanded sliders, additional customization options, and improved face morphing capabilities.
- **Why:** Vanilla character creator has limited sliders. This expands Fem V customization options significantly, allowing more unique and personalized character creation. The appearance pillar depends on strong character customization tools.
- **Conflicts:** Fem V only — no impact on male V or NPCs. May conflict with other character creator mods.
- **Dependencies:** ArchiveXL. Optional: VTK Vanilla HD Body - Head (#7054) if using VTK version; Eyes LOD Fix (#2865) as soft dependency. Verify on Nexus for full dependency list.
- **MO2 Notes:** Extract to game root. Fem V only. Apply before starting a new game for full effect. Tag as **Root**.
- **Performance:** None

Vessnelle's 4K Johnny Silverhand Overhaul

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/8965>
- **Version:** 1.0
- **Released:** 2023-08
- **Summary:** 4K texture overhaul for Johnny Silverhand's character model, including his clothing, cyberware arm, and facial details.
- **Why:** Johnny is the most visible NPC in the game, appearing in countless cutscenes and dialogue sequences. A 4K texture upgrade for his model supports the modlist's 4K baseline and ensures the most frequently seen character looks their best.
- **Conflicts:** May conflict with other Johnny Silverhand texture replacers
- **Dependencies:** None (texture replacer)
- **MO2 Notes:** Extract to `archive/pc/mod/` . Tag as **Root**.
- **Performance:** Light (single-character texture upgrade)

Judy Enhanced Body with 4K Texture

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10150>
- **Version:** 1.0.2
- **Released:** 2023-10
- **Summary:** Enhanced body mesh and 4K texture for Judy Alvarez. Improves detail and resolution of Judy's character model.
- **Why:** Judy is a primary romance option and appears extensively throughout the main story and her romance questline. A 4K texture upgrade ensures she looks her best, supporting the 4K baseline. Built on the Hyst Bodies framework — compatible with #9887 already installed.
- **Conflicts:** May conflict with Judy appearance mods or other NPC replacers affecting Judy.

- **Dependencies:** Hyst Bodies (#9887, already in modlist — file is Hyst-based: `Judy_Enhanced_Hyst_Body.archive`)
- **MO2 Notes:** Extract .archive to `archive/pc/mod/` . Compatible with Hyst Bodies (#9887) by design. Tag as **Root**.
- **Performance:** Light (single-character texture upgrade)

Lethal Curves - Modular Body Rig

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23462>
- **Version:** 2.0.0
- **Released:** 2025-08
- **Summary:** Modular deform rig for Fem V's body with 117,648 shape combinations. Customizes proportions while remaining compatible with all Fem V body mods. Deform-based approach sits on top of existing body meshes.
- **Why:** Provides player body customization without replacing the body mesh — works as a deform layer compatible with any body mod. Serves the appearance pillar by giving the player full control over V's body shape. Install only the Fem V target — skip the optional Judy/Panam/Evelyn NPC targets to avoid conflicts with Hyst Bodies.
- **Conflicts:** Skip the optional NPC target frameworks (Judy/Panam/Evelyn Unique Body Shape Rigs) to avoid conflicts with Hyst Bodies (#9887).
- **Dependencies:** Unique V Body Rig Framework - ArchiveXL (separate Nexus mod, install first). WolvenKit Console (required for archive generation — involves a build step, not drag-and-drop). Optional: MPAF framework for UV variants.
- **MO2 Notes:** This is NOT drag-and-drop. Requires WolvenKit Console for archive generation. Steps: (1) Install Unique V Body Rig Framework first, (2) Install Lethal Curves, (3) Use WolvenKit Console to generate the deform archive, (4) Load the generated archive in MO2. Install only Fem V target — do NOT install the optional NPC targets (Judy/Panam/Evelyn). Tag as **Root**.
- **Performance:** None (deform layer, no runtime scripts beyond initial generation)

VAXIS's ULTRA Physics Overhaul

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/30332>
- **Version:** 1.5
- **Released:** 2026-07
- **Summary:** Comprehensive physics overhaul for character and cloth physics. Improves the quality and realism of body physics, clothing movement, and environmental physics interactions.
- **Why:** Physics quality is particularly noticeable at 4K resolution where jittery or low-fidelity physics animations break visual consistency. This overhaul improves physics simulation

quality, enhancing the visual presence of characters and their clothing.

- **Conflicts:** May conflict with other physics mods. Check compatibility with Citizen Breast Physics (#21520, already installed).
 - **Dependencies:** Verify on Nexus — likely ArchiveXL and RED4ext. Check for other native plugin dependencies.
 - **MO2 Notes:** Extract to game root. Test physics quality impact at 4K — may have performance implications in crowded areas. Verify compatibility with Citizen Breast Physics. Tag as **Root**.
 - **Performance:** Moderate (physics calculations, more noticeable in crowded areas)
-

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. 8k-4k Skin Texture and Material
2. Universal Skin Tone - Realistic Textures
3. Realistic Complexion II (for Universal Skin Tone)
4. Songbird's New Look REMASTERED
5. NPCs Enhancement - Hyst Bodies
6. CET NPC Body Tweaks
7. Gymfiend - Body Mod - Male V - VTK
8. Citizen Breast Physics
9. Hair Color Profiles CCXL
10. Wolfcut Hair Collection - CCXL
11. Beanie's CCXL Salon - 21 Fem V Hairstyles
12. EKT Custom Character Creator - FEMV ONLY
13. Vessnelle's 4K Johnny Silverhand Overhaul
14. Judy Enhanced Body with 4K Texture
15. Lethal Curves - Modular Body Rig
16. VAXIS's ULTRA Physics Overhaul

11 - Clothing & Fashion

Goal: Clothing, fashion, and style. Clothing pieces, full sets, virtual atelier stores, outfit management systems, and wardrobe expansion.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Virtual Atelier

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/2987>
- **Version:** 1.2.7
- **Released:** 2025-12-28
- **Summary:** Framework for browsing and purchasing modded clothing from in-game web stores. Required by most clothing mods that add shop purchases.
- **Why:** Core framework — modded clothing items need a way to be acquired in-game without CET console commands. Virtual Atelier provides immersive in-game web stores for browsing and buying.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Install first — all atelier-dependent mods go after.
- **Performance:** None

Equipment-EX

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6945>
- **Version:** 1.2.7
- **Released:** 2026-02-28
- **Summary:** Expands equipment slots to allow wearing multiple clothing items in the same slot (e.g., necklaces over tops), transmog system, and toggle items.
- **Why:** Core framework — many clothing mods use toggle items and expanded slots for customization. Enables wearing accessories with overlapping body slots.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Toggle items appear in specific equipment slots defined by each clothing mod.
- **Performance:** None

The Community Palette Project

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10437>
- **Version:** 2.0
- **Released:** 2024-01-27
- **Summary:** Shared color palette resource for clothing mod authors. Required by many color-variant clothing mods including Novawear Pants.
- **Why:** Required dependency for clothing mods that offer multiple color variants. Provides a standardized color set so items from different authors use consistent palette names.
- **Conflicts:** None known
- **Dependencies:** None (asset-only framework)
- **MO2 Notes:** Extract to game root. Tag as **Root**. Install before any clothing mod that references it.
- **Performance:** None

Novawear Pants - Fem Masc V (ArchiveXL)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/31328>
- **Version:** 1.0
- **Released:** 2026-07-09
- **Summary:** Tactical-style pants for both V body types. 50 colors (40 custom + 10 vanilla), toggleable cuffed legs, and 4 detail toggle items.
- **Why:** High-quality, highly customizable pants that work with both male and female body types. The toggle system (cuffed legs, molle straps, buckles, zippers) gives fine-grained control over appearance.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, TweakXL, The Community Palette Project, Equipment-EX, CET (optional for item codes)
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Toggle items in Legs Inner slot (detail toggles) and Legs Outer slot (cuff toggles).
 - 50 color variants available via Virtual Atelier or CET item codes.
 - Supports vanilla, RB (EBBRB, EBBPRB), Eve, Angel, and Gymfiend body mods.
- **Performance:** None

Revised Backpack

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/17642>
- **Version:** 0.9.14
- **Released:** 2026-06-15

- **Summary:** Custom inventory management screen with sortable columns, filtering by name/type/tier/ammo, item previews, mass junk, and mass disassemble. Accessible from the hub menu.
- **Why:** Vanilla inventory has no sorting, filtering, or bulk actions. This replaces it with a proper spreadsheet-like interface where you can sort by DPS, tier, weight, price, filter by item type, and bulk-junk or disassemble.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, Input Loader, RED4ext, redscript. Optional: Mod Settings.
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Access via hub menu backpack button. Configure sorting in Mod Settings.
 - Supports Ctrl+click and Shift+click for multi-select.
- **Performance:** Light (custom UI only on backpack open)

Virtual Atelier Delivery

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21482>
- **Version:** Verify
- **Released:** 2025-05-01
- **Summary:** Adds a delivery system to Virtual Atelier purchases — items ordered online are shipped to V's apartment stash rather than appearing instantly in inventory.
- **Why:** Virtual Atelier is already in the modlist as the online shopping framework. The instant-item-delivery breaks immersion — this adds a realistic delivery delay that makes shopping feel grounded in the world. Complements Virtual Atelier without changing its core functionality.
- **Conflicts:** None known. Requires Virtual Atelier.
- **Dependencies:** Virtual Atelier (#2987, already installed). ArchiveXL, Codeware, RED4ext, TweakXL.
- **MO2 Notes:** Extract to game root. Install after Virtual Atelier. Configure delivery time via settings. Tag as **Root**.
- **Performance:** None

Hyst Atelier Store - Virtual Atelier

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6015>
- **Version:** Verify
- **Released:** 2023-11-01
- **Summary:** Virtual Atelier storefront for Hyst body-compatible clothing. Adds a curated selection of outfits and individual pieces designed for Hyst body meshes.

- **Why:** Expands the Virtual Atelier ecosystem with a dedicated store for Hyst-compatible clothing. Since Hyst Bodies (#9887) is already in the modlist, having a clothing store that specifically supports that body framework ensures clothing compatibility.
- **Conflicts:** None known. Virtual Atelier store — no world edits.
- **Dependencies:** Virtual Atelier (#2987). Hyst Bodies (#9887) for full body compatibility.
- **MO2 Notes:** Extract to game root. Install after Virtual Atelier and Hyst Bodies. Access via Virtual Atelier computer terminal. Tag as **Root**.
- **Performance:** None

Zenitex Virtual Atelier

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10090>
- **Version:** Verify
- **Released:** 2023-10-01
- **Summary:** Virtual Atelier storefront offering a wide range of stylish, cyberpunk-appropriate clothing for Fem V. Includes casual wear, street fashion, and corpo attire.
- **Why:** Expands the Virtual Atelier ecosystem with a well-curated clothing store. Zenitex is one of the most popular Atelier stores on Nexus, offering high-quality, lore-appropriate fashion that fits Night City's aesthetic.
- **Conflicts:** None known. Virtual Atelier store.
- **Dependencies:** Virtual Atelier (#2987). Community Palette Project (#10437) for color variants.
- **MO2 Notes:** Extract to game root. Install after Virtual Atelier. Access via Virtual Atelier computer terminal. Tag as **Root**.
- **Performance:** None

The Zenitex Military Store

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21735>
- **Version:** Verify
- **Released:** 2025-06-01
- **Summary:** Virtual Atelier storefront for tactical and military-style clothing and gear. Includes combat pants, tactical vests, military jackets, and operator-wear.
- **Why:** Night City's combat zones and edgerunner culture demand tactical fashion alongside street style. This store fills the tactical/military niche in the Virtual Atelier ecosystem, offering practical combat-ready clothing options.
- **Conflicts:** None known. Virtual Atelier store.
- **Dependencies:** Virtual Atelier (#2987). Zenitex Virtual Atelier (#10090) for shared assets.
- **MO2 Notes:** Extract to game root. Install after Zenitex Virtual Atelier. Access via Virtual Atelier computer terminal. Tag as **Root**.

- **Performance:** None

NanoSuit - Archive XL

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/14677>
 - **Version:** Verify
 - **Released:** 2024-05-01
 - **Summary:** Adds a high-tech nanosuit armor set using ArchiveXL framework. Includes helmet, body suit, and accessories with customizable colors and variants.
 - **Why:** A nanosuit fits perfectly in Cyberpunk's transhumanist world — it's the kind of cutting-edge combat tech that corps and edgerunners would use. ArchiveXL-based means no file conflicts. Serves both the clothing and armor pillars.
 - **Conflicts:** None known (ArchiveXL-based, no file overwrites)
 - **Dependencies:** ArchiveXL, TweakXL, Community Palette Project (#10437)
 - **MO2 Notes:** Extract to game root. Access via Virtual Atelier or console commands. Tag as **Root**.
 - **Performance:** None
-

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Virtual Atelier
2. Equipment-EX
3. The Community Palette Project
4. Novawear Pants - Fem Masc V (ArchiveXL)
5. Revised Backpack
6. Virtual Atelier Delivery
7. Hyst Atelier Store - Virtual Atelier
8. Zenitex Virtual Atelier
9. The Zenitex Military Store
10. NanoSuit - Archive XL

12 - Armor & Gear

Goal: Armor and combat gear. Armor pieces, gear sets, transmog/vanity systems, and equipment that provides gameplay-affecting stats.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Zenitex Modular Military Backpack - ArchiveXL

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/18152>
 - **Version:** 1.5
 - **Released:** 2024-12-07
 - **Summary:** Modular backpack system with 60 items for both Vs. Dynamic mesh, garment support, gameplay bonuses, and lore-friendly design. ArchiveXL-powered equipment slot.
 - **Why:** Adds a visible, functional equipment layer to V's silhouette — backpacks that provide gameplay bonuses rather than pure cosmetics. The Zenitex ecosystem is well-maintained and lore-friendly, fitting Night City's militarized aesthetic.
 - **Conflicts:** None known. 0 bugs reported.
 - **Dependencies:** ArchiveXL, Codeware, Equipment-EX, RED4ext, redscript, TweakXL, Zenitex Core (#16356). Recommended: Zenitex Virtual Atelier (#10090), The Zenitex Military Store (#21735) for in-game purchasing.
 - **MO2 Notes:** Extract to game root. Tag as **Root**. Install after Equipment-EX and Zenitex Core. Purchase via Zenitex Virtual Atelier or Military Store. 3 files available (main mod + optional add-ons). Both male and female V supported.
 - **Performance:** None
-

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Zenitex Modular Military Backpack - ArchiveXL

13 - Weapons

Goal: Weapons and combat tools. New firearms, melee weapons, cyberware weapons, attachments, optics, and weapon visuals.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Militech Holosight

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6463>
- **Version:** 0.84
- **Released:** 2024-02-08
- **Summary:** Replaces the Kanone MINI optic with a futuristic holographic sight. Custom model, icon, and tech-weapon charging bar integration.
- **Why:** Vanilla Kanone MINI is generic and dated-looking. The holographic sight adds a proper cyberpunk aesthetic to weapon optics with a clean, futuristic reticle and visual feedback for tech weapon charging.
- **Conflicts:** None known
- **Dependencies:** None
- **MO2 Notes:** Place `Scope_2.archive` in `Cyberpunk 2077/archive/pc/mod/`. Replaces Kanone MINI — other optics are unaffected.
- **Performance:** None

Expanded Ammo Counts

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/5040>
- **Version:** 1.0
- **Released:** 2022-08-21
- **Summary:** Expands maximum ammo capacity for all weapon types. Available in Unlimited and Realistic variants.
- **Why:** Vanilla ammo pools are large enough to rarely matter. The Realistic variant turns ammo into a resource to manage, adding light survival tension without being punishing.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks
- **MO2 Notes:** Use the **Realistic** variant only (not Unlimited -- conflicts with no-cheat philosophy). Install to `Cyberpunk 2077/bin/x64/plugins/cyber_engine_tweaks/mods/`. No FOMOD — choose Realistic file from the Files tab.

- **Performance:** None

Better Chimera Mods

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/18209>
- **Version:** 1.1.1
- **Released:** 2024-12-03
- **Summary:** Overhauls Chimera weapon modifications (Firecracker, etc.) to be more impactful and mechanically interesting while staying balanced.
- **Why:** Vanilla Chimera mods are underwhelming for Phantom Liberty's late-game reward tier. This rebalance makes them worth hunting without power creep, matching the Merchants of Death quality standard.
- **Conflicts:** Other mods modifying Chimera weapon mod stats
- **Dependencies:** Phantom Liberty, ArchiveXL, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Uses `archive/pc/mod/` and `r6/tweaks/` structure. v1.1.1 adds Pyromania Unchained compatibility.
- **Performance:** None

Nomad Cache - New Iconic Weapons

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19234>
- **Version:** 1.0.1
- **Released:** 2025-01-21
- **Summary:** Adds four Nomad-themed iconic weapons (Inferno-V8R, Warden Infernal, Satara Trailblazer, Tomahawk Tepew) with custom models, effects, and world-placed acquisition.
- **Why:** High-quality weapon pack from the Merchants of Death collective. Each weapon has unique mechanics tied to location-based discovery rather than crafting, rewarding exploration.
- **Conflicts:** Other mods using the same base weapon icon slots
- **Dependencies:** Phantom Liberty, ArchiveXL, Codeware, RED4ext, redscript, Trigger Mode Control (for Trailblazer variant), TweakXL
- **MO2 Notes:** Extract to game root. Uses `archive/pc/mod/`, `r6/tweaks/`, and `r6/scripts/`. Trigger Mode Control required for the Trailblazer Satara variant. Weapons found through world exploration -- refer to mod page images for locations.
- **Performance:** None

Mox Cache - New Iconic Weapons

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/20073>
- **Version:** 1.0.2

- **Released:** 2025-03-02
 - **Summary:** Adds three Mox-themed iconic weapons (Sloppy Seconds Guillotine, Glitch Bitch Achilles, +1 secret) with custom appearance, unique effects, and vendor/world acquisition.
 - **Why:** Complements Nomad Cache with a different faction theme. Creative weapon mechanics (bounce-between-enemies, micro-taser activation) add tactical variety. World-integrated through vendors and exploration rather than menus.
 - **Conflicts:** Other mods using the same base weapon icon slots
 - **Dependencies:** Phantom Liberty, ArchiveXL, Codeware, RED4ext, redscript, TweakXL
 - **MO2 Notes:** Extract to game root. Weapons acquired from: Lizzie's Bar bartender (Glitch Bitch), NCPD Scanner Hustle south of Kabuki Market (Sloppy Seconds), Jig-Jig Street vendor (secret weapon). Alternate acquisition via Mr. Blue Eyes vendor mod available.
 - **Performance:** None
-

Install Order

1. Militech Holosight
2. Expanded Ammo Counts
3. Better Chimera Mods
4. Nomad Cache - New Iconic Weapons
5. Mox Cache - New Iconic Weapons

Notes:

- **Militech Holosight** and **Expanded Ammo Counts** are standalone with minimal or no dependencies — install early
- **Better Chimera Mods**, **Nomad Cache**, and **Mox Cache** all require Phantom Liberty and the TweakXL/ArchiveXL/redscript stack — ensure core utilities (Category 02) are installed first
- **Nomad Cache** and **Mox Cache** share the same author and archiving structure — no overlap between them
- **Trigger Mode Control** must be installed for Nomad Cache's Trailblazer Satara variant

14 - Apartments & Housing

Goal: Housing and personal spaces. New apartments, apartment customization, decorations, garage expansions, and player home systems.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Apartment Cats - The Glen

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6276>
- **Version:** 2.3.1
- **Released:** 2026-05-14
- **Summary:** Adds a feline companion, Nali, to The Glen apartment. 12+ spots to find him, pet interactions, and integration with Romance Hangouts.
- **Why:** Makes The Glen apartment feel lived-in with a pet that has real presence — multiple roaming spots, sleep animations, and pet interactions. Fully compatible with other Apartment Cats mods.
- **Conflicts:** Compatible with all other Apartment Cats mods and Pet Your Cat
- **Dependencies:** ArchiveXL, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. To pet: greet Nali, then shower or use wardrobe, then pet. Pet interaction disabled during romance hangouts.
- **Performance:** None

Apartment Cats - Japantown

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/6493>
- **Version:** 2.3.1
- **Released:** 2026-05-14
- **Summary:** Adds a feline companion, Elmo, to the Japantown apartment. 12+ spots, pet interactions, and TV volume control compatibility.
- **Why:** Makes Japantown apartment feel homier with a cat that roams, sleeps, eats, and responds to petting. Full localization support.
- **Conflicts:** Compatible with all other Apartment Cats mods and I Really Want To Stay At Your House mods
- **Dependencies:** ArchiveXL, RED4ext, TweakXL
- **MO2 Notes:** Extract to game root. REDmod version available. Cat appears after purchasing Japantown apartment.
- **Performance:** None

Apartment Cats - Dogtown

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/10325>
- **Version:** 1.1.0
- **Released:** 2024-03-21
- **Summary:** Adds a feline companion, Suzi, to the Dogtown safehouse/apartment. 12+ spots and pet interactions. Requires Phantom Liberty.
- **Why:** The Dogtown safehouse is a major player home in Phantom Liberty but feels empty. Suzi makes it feel like a real living space with a companion that has her own personality and routines.
- **Conflicts:** Compatible with all other Apartment Cats mods
- **Dependencies:** ArchiveXL, RED4ext, TweakXL, Phantom Liberty
- **MO2 Notes:** Extract to game root. Cat appears once Dogtown becomes an apartment. To pet: greet Suzi, then shower or use wardrobe, then pet. Use Apartment Cats: Custom Cats (#6837) to change appearance.
- **Performance:** None

Clean Computer Wallpaper

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/13657>
- **Version:** 1.0
- **Released:** 2024-03-16
- **Summary:** Replaces the in-game computer desktop wallpaper with a clean, minimal version — no icons, no taskbar clutter. Just the background image.
- **Why:** Vanilla computer screens in apartments are cluttered with icons and taskbars that look busy. This provides a cleaner aesthetic for screenshots and immersion, making apartment computers feel like actual personal devices.
- **Conflicts:** None known
- **Dependencies:** None
- **MO2 Notes:** Extract to game root. Replaces the default wallpaper texture. Optional files may include alternate wallpaper designs.
- **Performance:** None

QoL Higher TV Quality

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/13090>
- **Version:** 1.0.0
- **Released:** 2024-02-17
- **Summary:** Increases TV resolution and bitrate for clearer, sharper picture on all in-game televisions across all apartments.

- **Why:** Vanilla in-game TVs have noticeably low-resolution, compressed video that looks blurry on 4K displays. This simple texture/stream quality upgrade makes apartment TVs look like actual modern screens.
- **Conflicts:** None known
- **Dependencies:** None
- **MO2 Notes:** Extract to game root. Tag as **Root**. Simple archive install — works for all apartment TVs automatically.
- **Performance:** None

Lucy Apartment Remastered

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/23239>
- **Version:** 1.4
- **Released:** 2025-09-02
- **Summary:** Lucy's apartment from Edgerunners, fully remastered and added as a playable location in the H10 Megabuilding.
- **Why:** Lucy's apartment is one of the most requested Edgerunners locations. This faithful recreation adds it as a fully functional player space with interactivity, drink options, and proper lighting/set design.
- **Conflicts:** Not compatible with H10 Elevator Expanded (19792)
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Native Interactions Framework, RED4ext
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Native Interactions Framework required for drink interactions.
 - Access from H10 Megabuilding — new apartment option.
- **Performance:** Light

Apartment Toys

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26674>
- **Version:** 1.2.0
- **Released:** 2026-01-07
- **Summary:** Adds flying AV toy drones to apartments with multiple design styles (TT, NCPD, MaxTac, Delamain, etc.) and bespoke flight paths.
- **Why:** Adds personality and customization to player apartments, making The Glen, Japantown, Corpo Plaza, and Penthouse feel more lived-in and personalized.
- **Conflicts:** May conflict with mods that redecorate or alter apartment layouts
- **Dependencies:** ArchiveXL, TweakXL, Deceptious Quest Core, Native Settings UI, Phantom Liberty

- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Choose AV design per apartment via Native Settings UI in CET overlay.
 - Each apartment toy can be set/disabled independently.
- **Performance:** None

Rent a Motel

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/21729>
- **Version:** 6.0
- **Released:** 2025-05-01
- **Summary:** Rent motel rooms across Night City — approach the payment terminal, pay for 24 hours or 7 days, and the room is yours. Sleep, shower, and use amenities. Overstay fines apply. 5 motels supported: Sunset (102), Kabuki (203), Dewdrop Inn (106), No-Tell (206, custom interior), Las Palapas (111, custom interior).
- **Why:** Extends the housing system beyond owned apartments — motels are everywhere in Night City but inaccessible. Confirmed compatible with patch 2.21-2.31. Works with Dark Future and Eviction Notice, adding low-cost temporary housing that fits the survival-lite economy. Configurable prices per motel.
- **Conflicts:** None known. Compatible with Dark Future and Eviction Notice.
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, Native Interactions Framework, redscript. Native Settings UI (optional, for settings). Recommended: Dark Future (#16300), Eviction Notice (#23187).
- **MO2 Notes:** Extract to game root. Prices configurable via Native Settings UI. Supports 11 languages. Overstay fine is 20% of rent cost. 10% discount for multi-day stays.
- **Performance:** None

Longshore Apartments - Charter Hill

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/28223>
- **Version:** 1.0
- **Released:** 2026-03-01
- **Summary:** Adds a new purchasable apartment in the Charter Hill district. Full interior with functional amenities, lighting controls, and stash access. Located in a luxury high-rise with city views.
- **Why:** Expands the housing system beyond the vanilla apartments. Charter Hill is an underserved district for player housing — this fills a geographic gap. Works with Eviction Notice's rent system and provides another location to customize and inhabit.
- **Conflicts:** None known. Standard apartment mod — compatible with housing and rent systems.

- **Dependencies:** ArchiveXL, Codeware, RED4ext, TweakXL. Compatible with Eviction Notice (#23187) and Dark Future (#16300).
- **MO2 Notes:** Extract to game root. Purchase via computer terminal or real estate listing. Rent applies if using Eviction Notice. Tag as **Root**.
- **Performance:** None

E3 Smart Windows

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7026>
- **Version:** 1.2
- **Released:** 2026-01-14
- **Summary:** Adds the interactive smart window from the 2018 E3 demo to V's apartments. Features dynamic weather display, time-of-day transitions, news feeds, and stock market integration that displays live portfolio data from the Stock Market and News System.
- **Why:** Restores one of the most requested cut features shown in pre-release demos. The smart window provides visual weather/ambient information and serves as a natural dashboard for the stock market system. 4,200+ endorsements.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, TweakXL. Stock market integration requires Stock Market and News System (#6319).
- **MO2 Notes:** Extract to game root. Tag as **Root**. Smart window appears in applicable apartments (The Glen, Japantown, Corpo Plaza, Northside). News and stock tickers require Stock Market and News System for full functionality.
- **Performance:** None

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Clean Computer Wallpaper
2. QoL Higher TV Quality
3. E3 Smart Windows
4. Apartment Cats - The Glen
5. Apartment Cats - Japantown
6. Apartment Cats - Dogtown
7. Apartment Toys
8. Rent a Motel
9. Longshore Apartments - Charter Hill
10. Lucy Apartment Remastered

15 - Vehicles & Transport

Goal: Vehicles and getting around Night City. Driving overhaul, new vehicles, car customization, vehicle handling, and transport systems.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Virtual Car Dealer

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4454>
- **Version:** 2.2.10
- **Released:** 2026-05-30
- **Summary:** In-game web store for browsing and purchasing vehicles. Replaces the fixed vendor list with curated dealerships featuring mod-added vehicles.
- **Why:** Required by many vehicle mods — provides an immersive buying experience through in-game web stores instead of CET console commands. Each dealer can curate their own inventory.
- **Conflicts:** None known
- **Dependencies:** ArchiveXL, Codeware, RED4ext, redscript, TweakXL
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Access via in-game web browser. Different dealers offer different inventories.
 - Install BEFORE any vehicle mods that use Virtual Car Dealer for distribution.
- **Performance:** None

Vehicle Pack - Utility

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4530>
- **Version:** Verify
- **Released:** 2024-08-15
- **Summary:** Adds utility vehicles (trucks, vans, work vehicles) to Virtual Car Dealer stock. Required by Dedra's Truck Simulator for cargo vehicle assets.
- **Why:** Required dependency for Dedra's Truck Simulator (#24102 in 06-Living World). Provides the utility vehicle models that the convoy delivery system uses.
- **Conflicts:** None known
- **Dependencies:** Virtual Car Dealer

- **MO2 Notes:** Extract to game root. Install after Virtual Car Dealer, before Dedra's Truck Simulator.
- **Performance:** None

Dedka Car Dealership - Working Vehicle Shop Framework

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/24887>
- **Version:** 1.2
- **Released:** 2025-10-01
- **Summary:** Physical vehicle dealership framework. Browse and purchase vehicles at a physical showroom rather than through the web interface. Vehicles sorted by category (Cheap, Heavy Duty, High-End). Features discount days, a Today's Deal spot, and weekday-specific sales.
- **Why:** Complements Virtual Car Dealer — VCD handles the web storefront while Dedka provides a physical dealership experience. Discount mechanics (weekday sales, Today's Deal spot at 35-50% off) add economic depth to vehicle purchasing. Prices strictly capped below VCD dealer prices.
- **Conflicts:** None known. Works alongside Virtual Car Dealer — not a replacement.
- **Dependencies:** ArchiveXL, Codeware, Cyber Engine Tweaks, RED4ext, redscript, TweakXL
- **MO2 Notes:** Extract to game root. Vehicle prices auto-generated based on VCD dealer prices with discounts applied. 15+ mods use this framework. Supports CET live-tuning of vehicle stats.
- **Performance:** None

Immersive Third-Person Vehicle Camera - TPP Cam Toolkit

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/20476>
- **Version:** Verify
- **Released:** 2025-10-01
- **Summary:** Third-person camera toolkit for vehicles. Provides customizable camera angles, FOV adjustment, and dynamic camera behavior for driving in third-person.
- **Why:** Vanilla third-person vehicle camera is limited and rigid. This toolkit provides cinematic and functional camera options for driving, enhancing the vehicle experience without conflicting with first-person mods (Immersive First Person is on-foot only, Shift is FP camera dynamics).
- **Conflicts:** None known. On-foot camera mods (Immersive First Person #9309, Shift #22340) operate in different domains.
- **Dependencies:** Cyber Engine Tweaks. Optional: Native Settings UI.
- **MO2 Notes:** Extract to CET plugins folder. Configure camera presets via CET overlay or Native Settings UI. Works in third-person driving mode only. Tag as **Root**.

- **Performance:** None

Quadra Turbo-Z

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/29122>
- **Version:** Verify
- **Released:** 2026-06-01
- **Summary:** Adds the Quadra Turbo-Z, a classic Cyberpunk-lore sports car, as a purchasable vehicle via Virtual Car Dealer.
- **Why:** The Quadra brand is iconic to the Cyberpunk universe. The Turbo-Z is a lore-friendly addition that expands the Virtual Car Dealer catalog with a vehicle that belongs in Night City. Complements existing Quadra models in the game.
- **Conflicts:** None known. Virtual Car Dealer vehicle.
- **Dependencies:** Virtual Car Dealer (#4454)
- **MO2 Notes:** Extract to game root. Purchase via Virtual Car Dealer. Tag as **Root**.
- **Performance:** None

Bikes of the Dark Future - Arch V4

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/18736>
- **Version:** Verify
- **Released:** 2024-12-01
- **Summary:** Adds the Arch V4 motorcycle line — lore-friendly Arch bikes with custom variants and paint options, purchasable via Virtual Car Dealer.
- **Why:** Arch motorcycles are a canonical Cyberpunk brand (co-designed with Keanu Reeves). Adding the V4 model expands the motorcycle roster with a vehicle that authentically belongs in the Cyberpunk universe.
- **Conflicts:** None known. Virtual Car Dealer vehicle.
- **Dependencies:** Virtual Car Dealer (#4454)
- **MO2 Notes:** Extract to game root. Purchase via Virtual Car Dealer. Tag as **Root**.
- **Performance:** None

Car Modification Shop

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4034>
- **Version:** 2.2.0.1
- **Released:** 2022-03-06
- **Summary:** In-game vehicle customization shop with visual and performance modifications. Access via CET hotkey to modify owned vehicles with paint, tuning, and handling upgrades.

The definitive vehicle modification mod with 24K+ endorsements.

- **Why:** Vanilla vehicle customization is limited to CrystalCoat paint jobs. This adds comprehensive vehicle tuning — performance upgrades, visual mods, and handling adjustments — making vehicle ownership feel more personal and rewarding. Essential for any vehicle-focused modlist.
- **Conflicts:** None known. CET-based — compatible with redscript vehicle mods.
- **Dependencies:** Cyber Engine Tweaks 1.37.1+
- **MO2 Notes:** Extract to game root. Tag as **Root**. Uses CET-KIT by Psiberx (MIT license). Access via CET overlay. Modifications are persistent per-vehicle. Install after Virtual Car Dealer and Dedka Dealership so modified vehicles can be purchased first.
- **Performance:** None

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Virtual Car Dealer
2. Vehicle Pack - Utility
3. Dedka Car Dealership - Working Vehicle Shop Framework
4. Immersive Third-Person Vehicle Camera - TPP Cam Toolkit
5. Quadra Turbo-Z
6. Bikes of the Dark Future - Arch V4
7. Car Modification Shop

16 - Locations & World Expansion

Goal: More places to go. New areas, interior expansions, open buildings, rooftop access, and environmental additions that expand Night City.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Marmur Bank (Watson District Branch)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/22048>
 - **Version:** 2.1
 - **Released:** 2025-06-01
 - **Summary:** Opens the Marmur Bank interior across from Tom's Diner near H10. ~25 NPCs on two time schedules (busy 6am-6pm, quieter at night). Created with World Builder.
 - **Why:** Adds a detailed, populated new interior to a prominent locked building in Watson. Fills an empty space players walk past constantly. v2.0 updated for game version 2.3.
 - **Conflicts:** May conflict with mods adding random shootouts in the area (e.g., Night City Alive).
 - **Dependencies:** ArchiveXL
 - **MO2 Notes:** Extract to game root. Also compatible with Marmur Bank - NC Bank add-on (12470) for deposit/withdraw functionality.
 - **Performance:** Light (25 NPCs, single interior cell)
-

Weeee - New H10 Exit

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/22334>
- **Version:** 2.0.2
- **Released:** 2025-06-25
- **Summary:** Adds a new exit from V's H10 apartment building via a garbage chute slide, providing an alternative route to street level near Coach Fred.
- **Why:** H10 is the player's primary residence but only has one exit point. Adding a secondary exit makes the apartment feel more connected to the surrounding neighborhood and provides practical convenience for daily routines.
- **Conflicts:** None known. Check compatibility with other H10 mods.
- **Dependencies:** ArchiveXL, Codeware, Deceptive Quest Core. Phantom Liberty NOT required (PL files bundled for base-game users).

- **MO2 Notes:** Extract to game root. Files go to `archive\pc\mod`. Tag as **Root**.
 - **Performance:** None
-

Urban Garden Grocery Store

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/28520>
 - **Version:** 1.0
 - **Released:** 2026-03-29
 - **Summary:** Adds a functional grocery store interior in Santo Domingo, overrun by drugs. Browse aisles, interact with the environment, and use as a drug cooking station when paired with Drug Dealer mod.
 - **Why:** Night City lacks mundane civilian infrastructure — everyone eats from vending machines. A grocery store adds civilian world authenticity, making the city feel inhabited by normal people who buy groceries. Serves the "living world" pillar by filling in missing civic infrastructure. Note: misclassified as adult content by Nexus — this is a normal location mod.
 - **Conflicts:** Any mod that changes the same building space. Compatible with Sit Anywhere and Immersive Night City Fixes.
 - **Dependencies:** Phantom Liberty DLC (required), ArchiveXL (required). Drug Dealer - Become a Kingpin (optional, for functional cooking station).
 - **MO2 Notes:** Extract to game root. Tag as **Root**.
 - **Performance:** Light (5 NPCs, single interior cell)
-

Casino Reforged - Assets Pack

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/26290>
 - **Version:** 1.1
 - **Released:** 2025-12-18
 - **Summary:** Shared asset pack for the Casino Reforged series. Provides models, textures, and props used by all casino phases. Required dependency for Phases 1 and 2.
 - **Why:** Foundation mod for the Casino Reforged project. Install first before any other casino mods.
 - **Conflicts:** None known. Asset pack only — does nothing on its own.
 - **Dependencies:** None (pure asset pack, no requirements).
 - **MO2 Notes:** Extract to game root. Install before all other Casino Reforged mods. Tag as **Root**.
 - **Performance:** None
-

Casino Updates - Lamps

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/19614>
 - **Version:** 1.0
 - **Released:** 2025-11-12
 - **Summary:** Adds light sources and lamp models to the casino roof area, improving nighttime visibility and atmosphere around the North Oak casino.
 - **Why:** Part of the Casino Reforged visual upgrade path. Small but impactful visual polish that enhances the casino district's nighttime atmosphere.
 - **Conflicts:** None known. Landscape/visual mod.
 - **Dependencies:** ArchiveXL. Lists Casino Reforged Phase 1 and Phase 2 as requirements on Nexus.
 - **MO2 Notes:** Extract to game root. Tag as **Root**.
 - **Performance:** None
-

Casino Updates - Neon

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25695>
 - **Version:** 1.0
 - **Released:** 2025-11-16
 - **Summary:** Adds neon signage to many areas of the casino roof, bringing colorful nighttime illumination to the North Oak casino district.
 - **Why:** Part of the Casino Reforged visual upgrade path. Neon is iconic to Cyberpunk's visual identity — adding it to the casino district enhances the area's atmosphere and makes it feel like a proper Night City landmark.
 - **Conflicts:** None known. Visual/landscape mod.
 - **Dependencies:** ArchiveXL. Lists Casino Reforged Phase 1, Phase 2, and Casino Updates - Lamps as requirements on Nexus.
 - **MO2 Notes:** Extract to game root. Tag as **Root**.
 - **Performance:** None
-

Casino Reforged - Phase 1 - Access Areas and Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25430>
- **Version:** 1.3.1
- **Released:** 2025-11-06
- **Summary:** Opens access to the previously-inaccessible North Oak casino area through a cleared tunnel. Fixes terrain, collision, and adds entry points for the casino building. Co-

authored with Oranje3.

- **Why:** The North Oak casino is a prominent landmark visible from much of Night City but completely inaccessible in vanilla. Phase 1 makes the area explorable, turning a background prop into a real location. Serves the exploration pillar.
 - **Conflicts:** None known. Location mod.
 - **Dependencies:** Phantom Liberty DLC (required), ArchiveXL, Casino Reforged - Assets Pack, Native Settings UI, TweakXL. Casino Updates - Lamps and Neon recommended for visual polish.
 - **MO2 Notes:** Extract to game root. Install after Assets Pack. Tag as **Root**.
 - **Performance:** None
-

Casino Reforged - Phase 2 - Access Road and Entrance

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25556>
 - **Version:** 1.1.2
 - **Released:** 2025-11-10
 - **Summary:** Completes the casino approach with a proper access road, car park, and grand entrance. v1.2+ unlocks the casino interior with lobby, floors, and a custom fast travel point. Co-authored with Kaoziun.
 - **Why:** Completes the Casino Reforged project by adding a believable access route and opening the casino interior. Without a proper road and entrance, the casino feels like an unfinished asset. Phase 2 turns it into a proper destination.
 - **Conflicts:** None known. Location mod.
 - **Dependencies:** Phantom Liberty DLC (required), ArchiveXL, Casino Reforged - Assets Pack, Casino Reforged - Phase 1, TweakXL. Galena GT Widebody and Jefferson Thrax Limo (optional, for vehicles in car park).
 - **MO2 Notes:** Extract to game root. Install after Phase 1. Tag as **Root**.
 - **Performance:** None
-

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Marmur Bank (Watson District Branch)
2. Weeee - New H10 Exit
3. Urban Garden Grocery Store
4. Casino Reforged - Assets Pack
5. Casino Updates - Lamps

6. Casino Updates - Neon
7. Casino Reforged - Phase 1 - Access Areas and Fixes
8. Casino Reforged - Phase 2 - Access Road and Entrance

17 - Visuals & Atmosphere

Goal: Visual quality and atmosphere. Lighting, weather, LUTs/color grading, texture improvements, and environmental effects. Performance-conscious choices only -- every visual mod must justify its frametime cost.

Mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Nova Rain (and Improved Ripples)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/13483>
- **Version:** 1.0.1a
- **Released:** 2024-03-10
- **Summary:** Subtle, realistically-sized rain particles that respect lighting conditions. Includes optional higher-quality water ripple textures.
- **Why:** Vanilla rain has oversized, in-your-face particles that glow unnaturally in shadow. This replaces them with subtle, light-responsive drops that look natural at night and in shadows, with improved ground ripple effects.
- **Conflicts:** Not compatible with other rain mods. Compatible with weather and lighting mods that don't edit rain textures/particles.
- **Dependencies:** None
- **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Optional improved ripples file available for download separately.
 - Works with path tracing, RT, and raster modes.
- **Performance:** Light

ReLUX (Lighting Redux)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/20808>
- **Version:** 2.2.0
- **Released:** 2026-02-15
- **Summary:** Overhauls interior lighting across major locations — removes fake GI bounces and replaces them with accurate emission from each light source. Covers Afterlife, Vik's, Misty's, Judy's, River's, All Foods, and fast travel terminals.
- **Why:** Vanilla interiors use baked fake global illumination and random light sources that don't match the actual fixtures. ReLUX replaces these with carefully placed real lights that respect the environment, creating grounded, cinematic interiors that shine in path tracing.

- **Conflicts:** None known — replaces vanilla lighting files
 - **Dependencies:** ArchiveXL, ReImagined (required for v2.31+)
 - **MO2 Notes:**
 - Extract to game root. Tag as **Root**.
 - Designed for path tracing but functional in RT and raster modes.
 - Modular updates released as separate downloads before being merged into AIO.
 - **Performance:** Light (asset replacement, no per-frame overhead)
-

Environment Textures Overhaul - ETO

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/13372>
 - **Version:** Verify
 - **Released:** 2024-03-08
 - **Summary:** Comprehensive overhaul of environment textures including roads, sidewalks, buildings, and terrain at 4K resolution.
 - **Why:** Supports the modlist's 4K baseline with high-resolution environment textures. Replaces vanilla textures that look blurry at 4K, significantly improving visual fidelity of Night City's surfaces.
 - **Conflicts:** Will be overwritten by any mod that changes the same textures. Install early in load order.
 - **Dependencies:** None (texture replacer)
 - **MO2 Notes:** Extract to `archive/pc/mod/`. Install early -- other texture mods should overwrite ETO where they conflict. Large download size. Tag as **Root**.
 - **Performance:** Heavy (increased VRAM usage from 4K textures)
-

Immersive Night City Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/20588>
- **Version:** Verify
- **Released:** 2025-04-01
- **Summary:** Fixes various visual bugs, floating objects, z-fighting, and misplaced props across Night City.
- **Why:** Even after CDPR's patches, visual bugs persist in the open world. This mod fixes floating props, clipping geometry, and visual errors that break immersion during exploration.
- **Conflicts:** Low -- uses ArchiveXL patching where possible
- **Dependencies:** ArchiveXL, TweakXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Safe to install mid-playthrough.
- **Performance:** None

General Shadows Fixes

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/20405>
 - **Version:** Verify
 - **Released:** 2025-03-28
 - **Summary:** Fixes shadow rendering issues including flickering, banding, and incorrect shadow casting across the game world.
 - **Why:** Shadow artifacts break visual consistency at 4K resolution. These fixes address engine-level shadow bugs that CDPR never patched, improving image quality without performance cost.
 - **Conflicts:** None known (shader-level fixes)
 - **Dependencies:** None (standalone)
 - **MO2 Notes:** Extract to game root. Tag as **Root**. Works alongside other visual mods.
 - **Performance:** None
-

Preem Mirrors - Reflective Mirror Materials

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25633>
- **Version:** Verify
- **Released:** 2025-12-04
- **Summary:** Upgrades mirror materials across Night City with proper reflective shaders, replacing the low-quality vanilla mirror surfaces.
- **Why:** Vanilla mirrors use blurry, low-resolution reflections that look dated. This mod applies proper reflective materials to mirrors, enhancing visual quality in apartments, bathrooms, and storefronts.
- **Conflicts:** May conflict with other mirror/reflection mods
- **Dependencies:** None (material override)
- **MO2 Notes:** Extract to game root. Tag as **Root**. Performance impact depends on the number of reflective surfaces in view -- generally Light.
- **Performance:** Light

No More Duplicate NPCs

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/15585>
- **Version:** 1.4
- **Released:** 2025-03-24
- **Summary:** Dynamically swaps duplicate NPC crowd appearances using two strategies — Unique Appearance Creation (via Codeware, GPU-intensive) or existing appearance swaps.

Configurable frequency slider via Mod Settings.

- **Why:** Seeing the same NPC face repeated across a crowd breaks visual immersion, especially at 4K where details are more visible. This mod dramatically improves crowd variety by randomly swapping duplicate appearances.
- **Conflicts:** Incompatible with NPC LoD Tweak (for PT). Compatible with crowd density mods (Nova Crowds, Psycho Crowds).
- **Dependencies:** ArchiveXL, Codeware, Mod Settings, redscript
- **MO2 Notes:** Extract to game root. Auto-detects graphics settings on first install — lower-end PCs default to Existing Appearance Swaps only (0% Unique). Debug overlay available via Mod Settings for troubleshooting. Tag as **Root**.
- **Performance:** Moderate (Unique Appearance Creation uses GPU); Light (Existing Appearance Swaps only)

Expanded Citizens

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/25765>
- **Version:** 1.0
- **Released:** 2025-11-20
- **Summary:** Expands citizen/crowd .ent files with 1,500+ existing-but-unreferenced appearances from the game files, making more visual variety available without adding new assets.
- **Why:** Complements No More Duplicate NPCs — where NMD actively swaps duplicates, this makes more base appearances available for the crowd system to draw from. Together they maximize visual variety in Night City's citizens.
- **Conflicts:** None known. Compatible with No More Duplicate NPCs — different approaches that complement each other.
- **Dependencies:** ArchiveXL
- **MO2 Notes:** Extract to game root. Tag as **Root**. Install before No More Duplicate NPCs in mod order if using both.
- **Performance:** Light

Beautiful IRIS - Eyes Texture for NPC

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/14083>
- **Version:** 1
- **Released:** 2024-04-06
- **Summary:** Replaces NPC iris textures with brighter, more refined versions from the Beautiful IRIS set. Preserves each NPC's original eye color. Only affects eyes with irises (not cyber-eyes).

- **Why:** NPC eyes share only ~10 base iris textures across the entire game — this subtle upgrade makes NPCs look brighter and more lifelike while keeping their identity intact. Fits the 4K visual baseline by improving a detail that becomes noticeable at high resolution.
 - **Conflicts:** Not compatible with other mods editing NPC eye diffuse textures. Compatible with Unique Eye Core.
 - **Dependencies:** None
 - **MO2 Notes:** Extract to `archive/pc/mod/` . Simple .archive install. Tag as **Root**. Works alongside other NPC visual mods.
 - **Performance:** None
-

Cyberpunk 2077 HD Reworked Project

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/7652>
- **Version:** 2.0
- **Released:** 2023-03-12
- **Summary:** Comprehensive texture overhaul by Halk Hogan PL (Witcher 3 HD Reworked author). Covers terrain, models/meshes, textures, and foliage across Night City with high-resolution replacements.
- **Why:** The definitive texture pack for Cyberpunk 2077 — 18K+ endorsements from a proven mod author. Vanilla textures look blurry at 4K resolution (this modlist's baseline). Halk Hogan's replacements are optimized to be performance-neutral or better than vanilla while providing significantly higher visual fidelity.
- **Conflicts:** Will be overwritten by other texture mods (ETO, Nova Rain, ReLUX). Install early in load order as a baseline texture layer.
- **Dependencies:** None (standalone texture replacer). REDmod tagged — uses .archive file replacement.
- **MO2 Notes:** Extract to `archive/pc/mod/` . Tag as **Root**. Install BEFORE ETO and other texture mods — let other visual mods overwrite where they conflict. Large download (multi-GB). Performance testing at 4K recommended.
- **Performance:** Moderate (increased VRAM usage from high-resolution textures; author's optimizations aim to offset this)

Install Order

All mods are **Root**-category — enable Root Builder in MO2 before installing.

1. Cyberpunk 2077 HD Reworked Project
2. Environment Textures Overhaul - ETO
3. Expanded Citizens

4. No More Duplicate NPCs
5. Beautiful IRIS - Eyes Texture for NPC
6. Immersive Night City Fixes
7. General Shadows Fixes
8. Preem Mirrors - Reflective Mirror Materials
9. Nova Rain (and Improved Ripples)
10. ReLUX (Lighting Redux)

18 - Audio & Music

Goal: Sound and music. Sound overhauls, custom radio stations, ambient soundscapes, weapon audio, and vehicle sounds.

More mods will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

RadioExt

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/4591>
- **Version:** 2.81
- **Released:** 2022-06-05
- **Summary:** Framework for adding custom radio stations. No modding tools required — copy songs into folders, edit a JSON file, and they appear as radio stations in-game. Supports custom icons, web stream sources, and in-world physical radios.
- **Why:** Essential foundation for all custom radio stations. Without this, no custom radio mods work. Also supports playback through Pocket Radio. 615 mods use this as a dependency — it's the backbone of the audio modding scene.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks, RED4ext
- **MO2 Notes:** Extract to game root. RadioExt creates `radioExt` folders in `bin/x64/plugins/cyber_engine_tweaks/mods/`. All custom radio station mods install into this structure. Install **before** any custom radio stations.
- **Performance:** None

Make Your Own Radio Station

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/31298>
- **Version:** 1.1
- **Released:** 2026-07-08
- **Summary:** Blank radio station template — drop your own MP3 files into a folder and listen via the user radio station in-game. Includes icon variants.
- **Why:** Simple way to add personal music without needing to build a RadioExt station from scratch. The blank template handles all the wiring — just add music files.
- **Conflicts:** None known
- **Dependencies:** RadioExt (hard requirement)

- **MO2 Notes:** Extract to game root. Music files go into the station's `music` folder. Supports all common audio formats readable by the game engine.
- **Performance:** None

PHONKWAVE RADIO (radioExt)

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/31179>
- **Version:** 1.0.5
- **Released:** 2026-07-04
- **Summary:** Curated 63-track phonkwave radio station with 125+ minutes of music, 19 lore-friendly in-game advertisements, and in-world radio streaming at Maelstrom and Aldecaldo bases. All tracks used with producer permission.
- **Why:** Phonk and phonkwave are authentically cyberpunk genres that fit Night City's aesthetic. This is the highest-quality genre-specific custom radio station on Nexus, with 3.4K+ downloads in its first two weeks.
- **Conflicts:** None known
- **Dependencies:** RadioExt, RED4ext, Cyber Engine Tweaks. Optional: Skip Radio Song for track skipping.
- **MO2 Notes:** Extract to game root. Radio station installs into the RadioExt structure. 19 advertisements are lore-appropriate — fits the world without breaking immersion.
- **Performance:** Light (additional audio streaming)

Volume Lock Fix

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/30873>
- **Version:** 1
- **Released:** 2026-06-26
- **Summary:** Locks volume settings at user-defined levels, preventing mods from resetting them. Includes Native Settings UI integration — no manual file editing.
- **Why:** Multiple mods in the modlist can reset volume settings on load. This ensures consistent audio levels without manual intervention after every game restart.
- **Conflicts:** None known
- **Dependencies:** Native Settings UI (for in-game configuration panel)
- **MO2 Notes:** Extract to game root. Configure via Native Settings UI -> Mods -> Volume Lock Fix. Set desired lock levels for each audio channel (master, music, SFX, dialogue, vehicle).
- **Performance:** None

Deadeye Sound Remover

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/12787>

- **Version:** 1.0
- **Released:** 2024-02-04
- **Summary:** Removes the cartoonish "DOINK!" sound effect that plays when the Deadeye perk triggers, while keeping the perk bonuses intact.
- **Why:** The Deadeye perk sound is jarring and immersion-breaking. This is the lightest possible fix — one TweakXL folder, zero dependencies, zero performance cost. Included in 51 Nexus collections including Welcome to Night City and NCR Core.
- **Conflicts:** None known
- **Dependencies:** None
- **MO2 Notes:** Extract to game root. Creates `r6/tweaks/DeadeyeNoSound/`. To uninstall, delete the folder. No REDmod or script extenders required.
- **Performance:** None

Immersive Breathing

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/9423>
- **Version:** 2.12a
- **Released:** 2023-10-01
- **Summary:** Adds breathing sound effects and VFX to V: medium breathing when idle, heavy breathing when exhausted. Sprint, slide, and jump gain stamina costs for added realism.
- **Why:** V is a living person — breathing feedback adds physical presence and grounds the first-person experience. Stamina costs on movement actions create meaningful resource tradeoffs that pair well with survival systems.
- **Conflicts:** Known issue with Dead Eyes perk (WIP fix). May conflict with other stamina-modifying mods.
- **Dependencies:** Cyber Engine Tweaks, Immersive Stamina FX, Responsive V, TweakXL
- **MO2 Notes:** Choose CET or TweakXL version. TweakXL version installs to `r6/tweaks/`, CET version to `bin/x64/plugins/cyber_engine_tweaks/mods/`. Recommended companion mods: Player Movement Overhaul, Walk by Default 2.0. See optional file Breathing System Active Only When Sprinting for a lighter variant.
- **Performance:** Light (real-time audio + VFX)

80's Retrowave Synthwave Radio with FEMALE DJ VOICE - RadioEXT

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/3461>
- **Version:** 3
- **Released:** 2023-10-15
- **Summary:** Custom retrowave/synthwave radio station with a female DJ voice, using the RadioExt framework. Full station with music tracks and DJ banter.

- **Why:** Synthwave is the definitive cyberpunk music genre and fits Night City's aesthetic perfectly. 1768 endorsements and zero bug reports make this a proven, stable addition. RadioExt-based for clean integration with the game's radio system.
- **Conflicts:** None known
- **Dependencies:** Cyber Engine Tweaks, RadioExt, RED4ext
- **MO2 Notes:** Extract to game root. Station installs into RadioExt structure under `bin/x64/plugins/cyber_engine_tweaks/mods/radioExt/` . Must install RadioExt first. Custom DJ voice is pre-recorded (not AI-generated).
- **Performance:** Light (additional audio streaming)

Cosmopolitan Night City

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/5909>
- **Version:** 3.0
- **Released:** 2022-09-29
- **Summary:** NPCs across Night City speak 11 different languages with full voice acting and lipsync. Includes Kiroshi subtitle translation effects, correct dialogue timing, and gendered lines. Available in four editions.
- **Why:** In a city where cyberware can translate any language in real time, monolingual NPCs break immersion. This mod makes Night City feel like a true global metropolis. 2523 endorsements, v2.3 compatibility confirmed. Significantly boosts replayability by letting players hear international voice casts.
- **Conflicts:** Other mods modifying NPC dialogue voice lines. Compatibility patches available for Polyglot V and Change V's Native Language.
- **Dependencies:** Codeware and RED4ext (required for v3.0 Customizable edition). Lite and Enhanced editions have no script dependencies.
- **MO2 Notes:** FOMOD installer -- choose edition carefully. **Enhanced Edition:** all features (voice+lipsync+Kiroshi effect+correct timing+gendering). **Lite Edition:** minimal changes, more lore-friendly. **Customizable Edition (v3.0):** advanced features via Codeware. Subtitles available in 19 languages -- select matching patches in FOMOD. Large download (~multiple GB depending on edition).
- **Performance:** Light to Moderate (multi-language audio streaming, Codeware runtime for v3.0)

Install Order

1. RadioExt
2. Deadeye Sound Remover
3. Immersive Breathing

4. 80's Retrowave Synthwave Radio with FEMALE DJ VOICE - RadioEXT
5. Make Your Own Radio Station
6. PHONKWAVE RADIO (radioExt)
7. Cosmopolitan Night City
8. Volume Lock Fix

Notes:

- **RadioExt** must be installed before any custom radio stations
- All custom radio stations (80's Retrowave, Make Your Own, PHONKWAVE) depend on RadioExt
- **Deadeye Sound Remover** is a standalone TweakXL tweak with no deps — install anytime before Volume Lock Fix
- **Immersive Breathing** requires Immersive Stamina FX, Responsive V, and TweakXL — ensure those are installed first
- **Cosmopolitan Night City** has a complex FOMOD — review edition choice carefully before installing. Lite/Enhanced editions have no script deps; v3.0 Customizable requires Codeware+RED4ext
- **Volume Lock Fix** should be installed last to capture volume changes from all audio mods

19 - Performance & Optimization

Goal: Run the modlist at playable framerates. Hardware recommendations, benchmark methodology, optimization tools, engine settings, driver tuning, and per-mod performance analysis.

Hardware Recommendations

Tier	Target	CPU	GPU	RAM
Minimum	1080p 30 FPS	--	--	--
Recommended	1440p 60 FPS	--	--	--
Ultra	4K 60+ FPS	--	--	--

Hardware specs TBD -- will be filled after benchmarking.

Benchmark Methodology

1. Clean install of Cyberpunk 2077 v2.31 + Phantom Liberty
2. Mod Organizer 2 with all category mods installed
3. Run game on each hardware tier
4. Measure: average FPS, 1% lows, 0.1% lows, frame time consistency
5. Test locations: Little China (CPU-bound), Badlands (GPU-bound), Dogtown (mixed)

Optimization Tools

0-Engine Enhanced Mods

- **Nexus:** <https://www.nexusmods.com/cyberpunk2077/mods/28443>
- **Version:** 6.0.0
- **Released:** 2026-06-01
- **Summary:** Performance-optimized versions of popular CET mods. Rewrites per-frame polling loops into event-driven code using o-Engine's unified lifecycle and shared state management. Reduces CET script load by eliminating unnecessary onUpdate cycles.
- **Why:** CET runs mods on a single thread — a few heavy mods can cause frame stuttering. o-Engine rewrites the worst offenders to use event-driven architecture, reducing script load measurably. Provides optimized versions of Marmur Bank, Immersive Meditations, Card Collection, Rent a Motel, NC Courier Jobs, Dedka Car Dealership, Dedra's Truck Simulator, and Go on a Date (Panam) — all mods in this list.

- **Conflicts:** Install AFTER the original mods. Enhanced versions replace the CET scripts of the originals. Not a magic bullet — CET is still single-threaded and too many mods will still cause issues.
- **Dependencies:** Cyber Engine Tweaks. Original mods must be installed first for their assets.
- **MO2 Notes:** Extract to game root. Install AFTER all mods it enhances. Files section organizes enhanced versions by mod — install only the enhanced versions for mods you have. Retired enhancements moved to old files section.
- **Performance:** Positive (reduces CET script overhead)

Mods and tools will be added as they pass through the research pipeline. See `research/mods-to-investigate.md` for candidates under review.

Engine & Driver Settings

Settings guide will be populated during the research phase.

Per-Mod Performance Summary

Mod	Performance Cost	Category
--	--	--

Table will be populated as mods are added to the list.
