Installation Guide

Prerequisites

- A legitimate copy of GTA IV (Steam or retail)
- GTA IV must be patched to *version 1.0.8.0* (November 29, 2016)
- 20 GB free disk space
- Windows 7 or later

Step 1: Clean Installation

If you already have GTA IV installed, verify your version:

1. Right-click GTAIV.exe → Properties → Details
2. File version should read 1.0.8.0

Downgrading (if needed)

If you are on a newer version (e.g., Complete Edition) you will need to downgrade. Follow the GTA IV Downgrade Guide to get to 1.0.8.0.

Clean Install

1. Uninstall any existing GTA IV installation
2. Delete the remaining GTA IV folder (usually C:\Program Files (x86)\Rockstar Games\Grand Theft Auto IV)
3. Delete Documents\Rockstar Games\GTA IV (backup saves first)
4. Reinstall GTA IV
5. Patch to 1.0.8.0 if your installer doesn't include it

Step 2: FusionFix Installation

FusionFix is a comprehensive compatibility and bug-fix framework. It is *required* for both waves.

Current tested version: v3.18.0

1. Download version v3.18.0 from the FusionFix releases page
2. Extract the archive to your GTA IV root folder (where GTAIV.exe lives)
3. When prompted, *overwrite all files*
4. Launch the game once to verify it works

Verifying FusionFix is working

- Launch GTA IV
- You should see the FusionFix version number in the bottom-right corner of the main menu
- Open the in-game console (`~` key) — if it opens, FusionFix is active

Step 3: Mod Installation Order

When installing mods, always follow this order to avoid conflicts:

1. *FusionFix* — always first (handles compatibility)
2. *Script hook / mod loaders* — any dependencies that mods require
3. *Graphics mods* — ENB, textures, lighting (applied last to avoid overwrites)
4. *Content mods* — vehicles, weapons, map additions
5. *Mechanics mods* — physics, AI, damage models
6. *Audio mods* — radio, sound effects
7. *Configuration edits* — .ini and .xml tweaks

Step 4: First Launch

1. Launch GTAIV.exe (or PlayGTAIV.exe depending on your install)
2. Go to *Graphics* settings and set:
 - Resolution: your monitor's native
 - Texture Quality: High
 - View Distance: 30-40 (adjust based on performance)
3. Go to *Controls* and configure key bindings to your preference
4. Start a new game to verify everything works

Troubleshooting

| Problem | Solution | |----|----| | Game crashes on startup | Verify FusionFix is installed correctly. Check Documents\Rockstar Games\GTA IV\Logs\ | | Black screen on launch | Try windowed mode (-windowed launch parameter) | | Low FPS | Reduce View Distance and Shadow Quality in graphics settings | | Missing textures | Set Texture Quality to High or Medium | | Controls not working | Verify control bindings in Settings → Controls, then reinstall FusionFix |

Wave 0: Fresh Off the Boat — Mod List

> Roleplaying Theme: New immigrant arrives in Liberty City. You have no connections, no reputation, and no resources. You take odd jobs and learn the city's rhythms.

> *Scope*: UI improvements and quality-of-life fixes only. No graphics overhauls, no content additions, no mechanic changes. FusionFix provides all compatibility fixes.

> *Installation*: All mods below are installed on top of a clean GTA IV 1.0.8.0 with FusionFix already applied.

Wave 0: Fresh Off the Boat — How to Play

> *The container ship's horn drowns out the city noise as you step onto the dock at Port Tudor. You have a duffel bag, a burner phone, and an address scrawled on a napkin. Liberty City stretches before you — towering, filthy, alive. Somewhere in this concrete maze, you'll find your footing. Or it'll bury you.*

—

Getting Started

Understanding Liberty City

Liberty City is divided into four boroughs:

- *Broker* — starting area, loosely based on Brooklyn. Your first missions are here.
- *Bohan* — loosely based on the Bronx/Bedford-Stuyvesant. Unlocked early in the story.
- *Algonquin* — the central island, loosely based on Manhattan. The heart of the city.
- *Alderney* — loosely based on New Jersey. Unlocked later in the story.

Your first several hours will be in Broker. Take time to explore, learn the streets, and understand the traffic patterns.

Controls Reference (Default)

| Action | Keyboard | Controller | |---|---|---| | Move | WASD | Left stick | | Sprint / Accelerate | Shift (tap) | Right trigger | | Enter/Exit vehicle | F | Y/Triangle | | Handbrake | Space | A/X (Xbox) / R1 (PS) | | Weapon wheel | Tab | LB/L1 | | Phone | Up arrow | D-pad up | | Cover | Q | RB/R1 | | Aim | Right mouse button | Left trigger | | Shoot | Left mouse button | Right bumper | | Change radio | Scroll wheel / N | D-pad left/right |

The Phone

Your phone is your mission hub. Roman calls to start story missions. You can also:

- *Call contacts* to request services (cab, backup, etc.)
- *Answer calls* to receive mission briefings
- *Ignore calls* — most calls have no penalty for ignoring
- *Check your phone* at any time with the Up arrow

> *Tip:* Answer calls promptly. If you miss one, check your phone's recent calls to call back.

—

Core Mechanics

Driving

GTA IV's driving physics are simulation-leaning. Key principles:

- *Brake before turns* — braking mid-turn causes understeer
- *Tap the handbrake* (Space) for sharp turns, but use it sparingly
- *Heavier vehicles* (SUVs, trucks) handle worse but protect you in crashes
- *Faster vehicles* (sports cars) oversteer easily — feather the throttle
- *Motorcycles* are extremely nimble but the slightest collision throws you off
- *Traffic laws don't apply* but aggressive driving damages your vehicle

Combat

- *Use cover* (Q to take cover, then aim and shoot from behind it)
- *Headshots* are instant kills with most weapons
- *Pistol* — accurate at close-mid range, your go-to weapon
- *SMG* — spray for suppressive fire, not accuracy
- *Shotgun* — devastating up close, useless at range
- *Assault Rifle* — best all-around weapon, available later
- *Grenades* — excellent for groups in cover, dangerous up close
- *Melee* — free, silent, effective against single targets
- *Sniper Rifle* — extreme range, one-hit kills, limited ammo

Wanted System

Six levels of police response:

| Level | Response | |---|---| | ★ | One patrol car, passive search | | ★★ | 2-3 patrol cars, active pursuit | | ★★★ | Roadblocks, helicopters start arriving | | ★★★★ | Aggressive pursuit, more roadblocks | | ★★★★★ | FBI, spike strips, heavy response | | ★★★★★★ | Army, near-impossible to escape |

To lose the cops:

1. *Break line of sight* — duck into alleys, subways, or buildings
2. *Hide* — wait for the search radius to shrink
3. *Change your vehicle* — cops track your last known vehicle
4. *Pay 'n' Spray* — resprays your car and drops wanted level (not available at ★★★★★+)

Money

- Early game money is tight
- Missions pay modestly until later chapters
- Side activities (pool, darts, bowling) earn tiny amounts
- Taxi work is the most reliable early income
- *Don't buy weapons you don't need* — ammo is expensive

—

Tips for Wave 0

1. *Learn the map* without GPS waypoints at first. The street signs and landmarks are designed to be navigable.
2. *Do Roman's taxi missions early* — they pay reliably and teach you the streets.
3. *Save often* — use your safehouse bed to save before difficult missions.
4. *Check your email* at internet cafes for side missions and opportunities.
5. *Don't rush* — the game's strength is its atmosphere. Walk, drive slow, listen to the radio.
6. *Use pedestrians as guides* — ask for directions (press E near them) to get waypoints marked on your radar.
7. *Get off the main roads* — alleys and shortcuts are faster than following GPS.

Wave 1: City of Dreams — Mod List

> Roleplaying Theme: You've made a name for yourself. The immigrant who stepped off that boat is gone — now you have enemies, allies, and a reputation. The city is yours for the taking, but the higher you climb, the harder they'll fight to bring you down.

> *Scope*: Graphics, content, and mechanics mods that transform the game into a harder, richer experience. Builds on FusionFix (installed per installation guide) and Wave 0's lessons.

> *Installation*: Start with a fresh save on a clean GTA IV 1.0.8.0. Install FusionFix first, then mods in the order specified in the installation guide.

| Field | Value | |---| | *Version* | 1.0 | | *Dependencies* | FusionFix | | *System Impact* | Radio content, sound effects |

Description of the mod.

Installation notes for 1.0.8.0.

Wave 1: City of Dreams — Strategy Guide

> *The safehouse is bigger now. The calls come from different people — louder, more dangerous. You know which streets to avoid, which cops take bribes, which alleys dead-end. But the city has changed too. New faces. New threats. And the rules you learned? Some of them just got rewritten.*

—

Adjusting to Wave 1

Wave 1 assumes you understand the basics. Here's what's different:

- *Economy is tighter* — mods may increase costs and decrease mission payouts
 - *Police are smarter* — longer search durations, better pursuit AI
 - *Vehicles handle differently* — physics mods make driving more punishing
 - *Combat is deadlier* — damage mods mean fewer shots to kill (both you and enemies)
 - *New content* — vehicles, weapons, and map additions you need to learn
-

Advanced Strategy

Mission Planning

1. *Scout ahead* — drive to the mission area before triggering the objective
2. *Identify escape routes* — know where you're going before the shooting starts
3. *Prepare your vehicle* — a fast, durable car is worth more than a weapon
4. *Use the environment* — construction sites, alleys, and rooftops are tactical assets
5. *Save before every mission* — manual saves, not just autosaves

Vehicle Selection

| Type | Best For | Avoid For | |---|---|---| | Compact cars | City driving, tight alleys | Highway chases, ramming | | Sports cars | Speed, police evasion | Off-road, durability | | SUVs | Durability, ramming, off-road | Cornering, speed | | Motorcycles | Traffic weaving, off-road | Any collision | | Trucks | Roadblocks, intimidation | Everything else |

Weapon Loadouts

- *Primary slot* — Assault Rifle or SMG (mission flexibility)
- *Secondary slot* — Pistol (quick-draw, accurate)
- *Heavy slot* — Shotgun or Grenades (situational)
- *Melee* — Baseball bat or knife (silent, free ammo)

> *Pro tip:* Don't carry every weapon. You can't switch fast enough in a firefight. Pick 2-3 that cover your range needs.

Money Management

- *Don't buy cars* — they spawn in driveways and parking lots. Steal what you need.
 - *Invest in the safehouse* — some mods add safehouse upgrades that provide benefits
 - *Ammo is the real expense* — use melee and pistol for random encounters
 - *Side missions matter* — vigilante, paramedic, and taxi work pay well
-

FusionFix Tweaks for Wave 1

Wave 1 enables FusionFix settings that are unnecessary (or too much) for Wave 0.

See 06-fusionfix-config.md for the full reference. Key changes:

Setting	File	Default	Recommended	Effect	Notes
DisableClipTeleport	Stability.ini	false	true	Prevents streaming crashes with heavy mods	Essential.
EnableAmbientPeds	UI.ini	false	true	Adds more pedestrians for immersion	
FixVehicleCollision	Stability.ini	false	true	Required for vehicle damage mods	
IncreaseVehicleCount	UI.ini	1.5	2.0	More traffic, more chaos	
UnlockFrameRate	Graphics.ini	false	true	High FPS with graphics mods	

Refer to the [FusionFix Config] chapter for the full list and explanations.

Long-Term Strategy

1. *Complete all side content first* — missions get harder with mods
2. *Build relationships* — friend activities unlock special abilities and vehicles
3. *Explore every borough* — Wave 1 mods add content throughout the city
4. *Experiment with failures* — some mods add consequences to failure that change the story
5. *Take breaks* — modded GTA IV can be punishing. Step away when frustrated.

FusionFix Configuration Reference

> FusionFix uses ini-style configuration files located in GTAIVFusionFix_config/ in your game root. Settings are changed by editing the relevant .ini file.

Graphics

Setting	File	Default	Recommended	Notes
UnlockFrameRate	Graphics.ini	false	true	Removes 30 FPS cap. Required for smooth gameplay.
Resolution	Graphics.ini	auto	Native res	Use your monitor's native resolution.
ShadowQuality	Graphics.ini	Medium	High	Performance hit on low-end GPUs.
ReflectionQuality	Graphics.ini	Medium	High	Improves water and car reflections.
AmbientOcclusion	Graphics.ini	false	true	Adds depth to shadows. Performance impact.
WaterQuality	Graphics.ini	Medium	High	Improves water rendering significantly.
TextureFlushEnabled	Graphics.ini	false	true	Prevents texture pop-in at high settings.

Controls

Setting	File	Default	Recommended	Notes
MouseSensitivity	Controls.ini	0.5	Personal preference	Adjust if aiming feels sluggish.
InvertMouse	Controls.ini	false	Personal preference	Invert Y-axis for aiming.
ControllerVibration	Controls.ini	true	true	Controller feedback.
Deadzone	Controls.ini	0.2	0.1	Reduces stick deadzone for smoother aiming.
RawMouseInput	Controls.ini	false	true	Bypasses Windows mouse acceleration.

UI

Setting	File	Default	Recommended	Notes
MiniMapScale	UI.ini	1.0	1.2	Slightly larger radar for better navigation.
RadarRefreshRate	UI.ini	30	60	Smoother radar movement.
ShowAllVehicles	UI.ini	false	true	Shows all vehicle blips on radar.
ObjectiveTextSize	UI.ini	1.0	1.2	Larger mission text for readability.

Memory / Stability

Setting	File	Default	Recommended	Notes
DisableClipTeleport	Stability.ini	false	true	Essential. Prevents the "clip teleport" crash that happens when streaming can't keep up.
IncreaseStreamMemory	Stability.ini	0	1024	

Allocates more memory for texture streaming. || DisableShaderCaching | Stability.ini | false | false | Keep disabled — caching improves load times. || FixVehicleCollision | Stability.ini | false | true | Fixes vehicle collision bugs with modded cars. || PatchPedPool | Stability.ini | false | true | Prevents crashes from too many pedestrians. |

Misc

| Setting | File | Default | Recommended | Notes | |---|---|---|---| | SkipIntro | Misc.ini | false | true | Skips the intro logos on launch. || EnableConsole | Misc.ini | false | true | Enables in-game console (key) for commands. || AutoSave | Misc.ini | true | true | Keep enabled as a safety net. || EnableAmbientPeds | Misc.ini | false | true | Adds ambient pedestrian variety. || IncreaseVehicleCount | Misc.ini | 1.0 | 1.0-2.0 | Multiplier for traffic density. Higher values impact performance. || AllowScreenshot | Misc.ini | false | true | Enables screenshot key (F12 by default). |
