2 Mod Organizer 2 Installation Guide

3 Introduction

This guide walks you through setting up Mod Organizer 2 for X4 Foundations with the Stellar Dominion modlist.

3.1 Prerequisites

- X4 Foundations v9.0 installed (Steam or GOG)
- Mod Organizer 2 (latest stable) — download from Nexus Mods: <https://www.nexusmods.com/site/mods/1>
- A Nexus Mods account (free) for mod downloads

3.2 Installation

3.2.1 Step 1: Install Mod Organizer 2

Download the latest MO2 installer and run it. Choose *Portable* installation type and install to a directory *outside* your game folder (e.g., C:\Modding\MO2).

IMPORTANT: Portable mode keeps MO2 self-contained. Do NOT use Instance mode for this guide.

3.2.2 Step 2: Configure X4 in MO2

1. Launch MO2. It will prompt you to set up a game — select X4 Foundations.
2. If not auto-detected, browse to your X4 installation folder (e.g., C:\Program Files (x86)\Steam\steamapps\common\X4 Foundations).
3. Set the *Mod Staging Folder* to a location with plenty of disk space, inside your MO2 folder (e.g., C:\Modding\MO2\mods).

3.2.3 Step 3: Link Nexus Mods Account

1. In MO2, click the puzzle-piece icon (Tools) *Settings*.
2. Go to the *Nexus* tab.
3. Click *Associate with “Download with Manager” links*.
4. Click *Account* and log in with your Nexus Mods account.

3.2.4 Step 4: Create Profiles

Create one profile per wave:

1. In MO2, click the profile dropdown (top bar) *Manage Profiles*.
2. Create profiles: Stellar Dominion - Wave 0, Stellar Dominion - Wave 1, Stellar Dominion - Wave 2, Stellar Dominion - Wave 3.
3. Keep *Default* as-is for vanilla testing.

When upgrading from one wave to the next:

- Switch to the new profile
- Install the additional mods for the new wave
- Do NOT disable old mods — waves are cumulative

3.3 Load Order Rules

X4 loads mods alphabetically by folder name. MO2 manages this by renaming folders with priority prefixes. Follow this priority order:

1. *Libraries & Utilities* (API mods, frameworks) — lowest number prefix
2. *Total Conversions* and *Overhauls* (VRO, economy mods)
3. *Standalone Content* (ships, stations, sectors)

4. *Visual* and *Audio*
5. *UI* — highest number prefix

Example naming:

- 01 - Mod Support API
- 02 - Economy Overhaul
- 10 - Expanded Ships Pack
- 20 - Visual Enhancement
- 30 - Better Map

3.4 Running X4 Through MO2

1. In MO2, click the dropdown next to *Run* and select *X4 Foundations*.
2. If it's not listed, add it: Click the gears icon *Add from file* — browse to *X4.exe* in your game folder.
3. ALWAYS launch X4 from within MO2 so mods are loaded.

3.5 Troubleshooting

- *Mods not appearing in-game?* Make sure they are checked in the left panel AND the right panel shows them as active.
- *Game crashes on startup?* Check for missing dependencies (listed in each mod's entry). Disable mods one by one.
- *Wrong mod version?* Ensure every mod matches X4 v9.0. Check the mod's Nexus page for version compatibility notes.

4 Stellar Dominion Mod Order

X4 loads extensions alphabetically by folder name, so MO2 renames each mod folder with the priority prefix below. Install in this order (lowest prefix first); UI mods load last.

Priority	Mod	Group
01	Mod Support APIs	Libraries & Utilities
02	UI Extensions and HUD	Libraries & Utilities
03	Options Helper	Libraries & Utilities
10	VRO — Variety and Rebalance Overhaul	Overhauls
11	Foundation of Conquest and War	Overhauls
12	Reactive Factions Retribution	Overhauls
13	Landlord	Overhauls
14	KUDA AI Tweaks	Overhauls
20	Learning All The Things	Utilities
21	Sector Satellites	Utilities
22	Apologise for Attack	Utilities
23	Friendly Fire Tweaks	Utilities
24	Mimic Repeat Orders	Utilities

25	Mules, Supply and Warehouses Extended	Utilities
26	Hazard Rework	Utilities
27	Disable Encounters	Utilities
30	Better Piracy	Standalone Content
31	Reaction Force	Standalone Content
32	Recycle Ships and Stations	Standalone Content
33	Reemergence	Standalone Content
40	X4 Fire and Smoke	Visual & Audio
41	Paintjobs Galore!	Visual & Audio
42	Galaxy Remake STARS	Visual & Audio
43	Legacy Music	Visual & Audio
50	Custom Tabs	UI
51	Better Scan Colors	UI
52	Notification Filter	UI
53	Event Driven News	UI

Wave notes:

- *Wave 0*: install only the 01–03 and 50–53 entries (UI and libraries).
- *Wave 1*: add the 20–25 entries.
- *Wave 2*: add the 10, 14, 30, 31, 40, 41 and 43 entries, then start a NEW GAME (VRO requires it).
- *Wave 3*: add the remaining 11, 12, 13, 26, 27, 32, 33 and 42 entries — i.e., everything. When upgrading from Wave 2, keep all previously installed mods enabled.

5 Wave Setup & Roleplaying Backgrounds

Each wave is designed as a fresh playthrough with its own backstory, difficulty, and recommended settings.

5.1 Wave 0: The Uncharted

You were nobody. A fresh graduate from the military academy on Argon Prime. Your assets: one beat-up Discoverer, a few thousand credits, and a chip on your shoulder. The galaxy is vast, dangerous, and utterly indifferent. Every station is a mystery, every gate a leap of faith. You have no allies, no enemies, and no idea what you're doing. Good luck, Commander.

5.1.1 Recommended Settings

- *Difficulty:* Normal
- *Game Start:* Young Gun (tutorial-friendly)
- *DLC:* None required (play with DLCs disabled or ignore DLC content)
- *Mods:* None, or UI/QoL only. No mechanics-changing mods.

5.1.2 Goals for this Wave

- Complete the flight school tutorial
- Earn your first million credits
- Build your first small station
- Establish positive reputation with at least one faction
- Survive your first pirate encounter

5.2 Wave 1: The Opportunist

You've paid your dues. Your early fortune bought you a modest fleet — a handful of miners, a trader, a fighter. But the universe doesn't care about your comfort. New factions eye your territory, pirates hunt your trade lanes, and opportunities vanish as fast as they appear. You see the gaps in the market. You know who to bribe and who to fight. Now it's time to stop surviving and start thriving.

5.2.1 Recommended Settings

- *Difficulty*: Moderate (or Custom with higher enemy aggression)
- *Game Start*: Custom start — “The Unworthy Entrepreneur” (own a small trader + fighter, modest credits, neutral standing)
- *DLC*: Cradle of Humanity and Split Vendetta recommended
- *Mods*: Install Wave 0 + Wave 1 mods.

5.2.2 Goals for this Wave

- Build a functioning production chain
- Command a fleet of 10+ ships
- Establish a player-owned station with multiple modules
- Complete faction war missions
- Reach 100 million credit net worth

5.3 Wave 2: The Warlord

The galaxy is a tinderbox. Xenon fleets push deeper into civilized space. The factions squabble while the real threat grows. Someone needs to take command. Someone with vision, ruthlessness, and a fleet. The Argon Federation needs a hero — or a conqueror. You’ve built empires from nothing before. This time, you’ll do it on a scale that changes the map.

5.3.1 Recommended Settings

- *Difficulty*: Hard
- *Game Start*: Custom start — “Faction Leader” (start with a small fleet, one station, established faction relations)
- *DLC*: All DLCs required
- *Mods*: Install Waves 0 through 2 mods.

5.3.2 Goals for this Wave

- Build a wharf or shipyard
- Conquer your first sector (claim or destroy a faction’s sector)
- Build a mega-station (100+ modules)
- Reach 1 billion credit net worth
- Destroy a Xenon shipyard or installation

5.4 Wave 3: Stellar Dominion

You come from beyond the void. No one knows your past. No one trusts you. Every faction sees you as a threat, a predator that appeared from nowhere. The galaxy is unified — in its fear of you. But you know something they don't: the old powers are crumbling. The Xenon are not the real enemy. The real enemy is the stagnation that has gripped the universe for centuries. You will break it. You will reshape the gate network in your image. You will build a Stellar Dominion.

5.4.1 Recommended Settings

- *Difficulty*: Very Hard (or Custom with extreme settings)
- *Game Start*: Custom start — “The Outsider” (hostile with ALL factions, minimal assets, high Xenon activity)
- *DLC*: All DLCs required
- *Mods*: Install ALL mods (Waves 0 through 3).

5.4.2 Goals for this Wave

- Go from hostile-with-all to at least one allied faction
- Dominate the galactic economy (control 25%+ of total production)
- Destroy a faction's capital shipyard
- Own sectors in at least three different clusters
- Survive an endgame crisis (Xenon mega-fleet or similar)

6 Quick Reference: Wave Comparison

Wave	Name	Difficulty	DLC	Mods
0	The Uncharted	Normal	None	None / UI+QoL
1	The Opportunist	Moderate	CoH + SV rec.	Light
2	The Warlord	Hard	All DLCs	Heavy
3	Stellar Dominion	Very Hard	All DLCs	All

Wave 0: The Uncharted

7 How to Play X4 Foundations: A Beginner's Guide

This guide covers the essentials for Wave 0: The Uncharted. By the end, you'll know enough to survive, trade, fight, and build.

7.1 Getting Started

7.1.1 Controls Overview

Action	Default Key
Throttle Up	W
Throttle Down	S
Strafe Left/Right	A / D
Boost	Shift
Fire Weapon 1	Mouse 1
Open Map	Enter
Pause Menu	Esc

Open the controls menu (Esc → Controls) to rebind these to your preference.

7.1.2 The UI at a Glance

- *Top bar*: Credits, ship name, hull/shield status
- *Left panel*: Ship controls, target info
- *Bottom bar*: Ship systems, cargo, crew
- *Map (Enter)*: Sector view, universe view, property list, missions

7.2 Basic Trading

1. Fly to a station and dock.
2. Open the Trade menu (right-click station → Trade).
3. Buy low, sell high — check buy/sell offers in adjacent sectors.
4. Use the Map (Enter) → Trade Filters to find profitable routes.
5. Auto-trade: Hire a pilot (dock at a station with a crew lounge), right-click your ship → Information → right-click empty spot → Add Trade for Commander.

7.3 Basic Combat

1. Select a target (click on it or use Target Next — T).
2. Stay within weapon range (see weapon info in ship info panel).
3. Use strafe (A/D) to dodge incoming fire.
4. Boost (Shift) to close distance or escape.
5. Boarding: Requires skilled marines, a target with engines disabled, and a boarding pod.

7.4 Reputation & Factions

- Each faction has a reputation scale (-30 to +30).

- +10: Allows docking at military stations.
- +20: Allows buying blueprints and larger ships.
- Rising quickly: Do missions for a faction (mission offers appear in space or on station message boards).
- Falling: Don't shoot faction ships or stations. Pay off fines at police stations.

7.5 Station Building

Minimum requirements:

- 5+ million credits
- A suitable sector (ore, silicon, and sunlight nearby)
- A builder ship (hire from faction wharfs)

Steps:

1. Buy a Plot Deed (Map → right-click empty space → Place Plot).
2. Choose station type (start with a simple Refined Metals or Energy Cell station).
3. Hire a Builder (right-click builder ship → Hire).
4. The builder constructs your station module by module.

7.6 Your First Goals

1. Fly through the tutorial (flight school).
2. Scan data leaks on stations for free credits and blueprints.
3. Mine or trade until you have 1 million credits.
4. Buy a mineral miner and set it to automine in a resource-rich sector.
5. Build your first station.
6. Save often — X4 has no quicksave in flight.

7.7 Mod List

7.7.1 Utilities & Libraries

SirNukes' Mod Support APIs *utility*

Library mod providing scripting APIs (hotkeys, context menus, UI widgets) that other mods depend on. Does nothing on its own — install it first, then the mods that require it.

Mechanics: Pure API library; no gameplay changes. The optional Hotkey API component can use an external helper from the author's GitHub for global hotkeys, but the in-game features work without it.

Options Helper *utility*

Chem O'Dun's Mission Director library that lets mods expose in-game options menus through the Mod Support APIs. Required by Notification Filter.

Dependencies: SirNukes' Mod Support APIs

7.7.2 UI

UI Extensions and HUD *ui*

Kuertee's UI framework: adds new panels, hotkeys and helper systems that many other mods in this list build on. Installs the framework itself and does not change game mechanics. Keep "Protected UI Mode" enabled and match the mod version to your X4 build (v9.0).

Custom Tabs *ui*

Adds up to three extra, fully customisable tabs to the map so you can keep separate property, trade and fleet views as your empire grows.

Better Scan Colors *ui*

Improves the colour shading shown on station modules during scan mode, so scanned and unscanned states are easier to read at a glance.

Notification Filter *ui*

Filters trivial messages out of the ticker and logbook (relation changes, small money transactions, storage warnings, construction pings) to cut interface clutter and ticker lag. Fully configurable.

Dependencies: SirNukes' Mod Support APIs, Options Helper

Event Driven News *ui*

Adds a news ticker driven by real events in your universe — wars, economy shifts, faction developments — keeping you informed and immersed.

Wave 1: The Opportunist

8 Wave 1: The Opportunist — Strategy Guide

8.1 Advanced Trading & Production Chains

By now you understand basic supply and demand. Let's scale up.

8.1.1 Production Chains

The most profitable early vertical integration:

1. Energy Cells (cheapest producer, everything needs them)
2. Refined Metals (ore + energy) — used by every shipyard
3. Hull Parts (refined metals + energy) — station building bottleneck
4. Claytronics (silicon + energy) — advanced station building

Aim to control all four before expanding into weapon components or ship tech.

8.1.2 Sector Selection for Stations

When choosing where to build, prioritize:

- *Resource richness*: High ore/silicon concentration (use Map -> Resource Filters)
- *Sunlight*: greater than 100% for solar production
- *Safety*: Low pirate/Xenon activity
- *Market access*: Short travel time to faction wharfs and shipyards

8.2 Fleet Management

8.2.1 Ship Roles

- *M class (Corvette/Frigate)*: Patrol, escort, boarding
- *L class (Destroyer/Freighter)*: Sector defence, bulk cargo
- *XL class (Carrier/Battleship)*: Fleet command, sector assault

8.2.2 Fleet Commands

Use the Map -> right-click your ship -> Fleet Commands:

- *Defend Position*: Ship patrols a radius around a point.
- *Attack*: Ship engages a target or target area.
- *Intercept*: Combat ships engage enemies within range.
- *Supply Fleet*: Resupply ammo/missiles from a designated freighter.

8.3 Diplomacy

- *Trade licenses*: Some factions require them to trade in their space.
- *Embassies*: Build in faction capitals to improve relations faster.
- *Black market*: Find station bartenders for illegal trades.

8.4 Mod List

8.4.1 Utilities & Libraries

SirNukes' Mod Support APIs *utility*

Library mod providing scripting APIs (hotkeys, context menus, UI widgets) that other mods

depend on. Does nothing on its own — install it first, then the mods that require it.

Mechanics: Pure API library; no gameplay changes. The optional Hotkey API component can use an external helper from the author's GitHub for global hotkeys, but the in-game features work without it.

Options Helper *utility*

Chem O'Dun's Mission Director library that lets mods expose in-game options menus through the Mod Support APIs. Required by Notification Filter.

Dependencies: SirNukes' Mod Support APIs

Learning All The Things *utility*

Lets crew gain small amounts of experience passively over time instead of only through seminars and grinding, so pilots, managers and marines reach the 3-star thresholds for autonomous trading and mining at a sane pace.

Mechanics: Every 20 minutes each NPC has a configurable chance (default 30%) to gain 1 skill point; NPCs don't learn while docked. Adjust chance/amount/job-fitting in `learningallthethings.xml`. Safe to add or remove mid-save.

Sector Satellites *utility*

A single satellite in a sector keeps trade prices and station information updated for all known non-hostile stations, removing the need to spam satellites everywhere — and is a welcome performance win.

Apologise for Attack *utility*

Lets you comm a ship or station that turned hostile after an accidental hit and apologise; if your reputation with the faction is good enough they forgive the transgression and drop hostility.

Friendly Fire Tweaks *utility*

Stops stray turret or AoE shots from instantly turning friendly factions hostile. Configurable conditions (victim being targeted, shield threshold, weapon type) must be met before retaliation penalties trigger.

Mimic Repeat Orders *utility*

Lets subordinates copy their commander's Repeat Orders queue (trade and mining routes), automatically rescaling cargo amounts to each ship's capacity. Set a route up once and mirror it across a fleet.

Mechanics: Changes propagate to subordinates within ~30 seconds; supports one level of mimicry only; ships still need sufficient pilot skill to execute the copied orders.

Dependencies: SirNukes' Mod Support APIs

Mules, Supply and Warehouses Extended *utility*

Adds four specialised trader AI scripts — Travel, Station, Supply and Distribution Mules — for automated logistics between your stations, warehouses and the open market.

Mechanics: Travel Mule sells at profit to NPC factions; Station Mule runs dedicated supply lines (and can set up warehouse stations); Supply Mule fetches resources to keep stations stocked; Distribution Mule balances cargo across your warehouse network.

8.4.2 UI

UI Extensions and HUD *ui*

Kuertee's UI framework: adds new panels, hotkeys and helper systems that many other mods in this list build on. Installs the framework itself and does not change game mechanics. Keep "Protected UI Mode" enabled and match the mod version to your X4 build (v9.0).

Custom Tabs *ui*

Adds up to three extra, fully customisable tabs to the map so you can keep separate property, trade and fleet views as your empire grows.

Better Scan Colors *ui*

Improves the colour shading shown on station modules during scan mode, so scanned and unscanned states are easier to read at a glance.

Notification Filter *ui*

Filters trivial messages out of the ticker and logbook (relation changes, small money transactions, storage warnings, construction pings) to cut interface clutter and ticker lag. Fully configurable.

Dependencies: SirNukes' Mod Support APIs, Options Helper

Event Driven News *ui*

Adds a news ticker driven by real events in your universe — wars, economy shifts, faction developments — keeping you informed and immersed.

Wave 2: The Warlord

9 Wave 2: The Warlord — War & Conquest Guide

9.1 Sector Warfare

9.1.1 Preparation

Before declaring war:

1. Stockpile hull parts, claytronics, and weapon components (6+ hours of projected consumption).
2. Build a forward supply station near the target sector.
3. Scout enemy fleet positions and station defences.
4. Ensure your fleet outnumber the sector's defence fleet 2:1.

9.1.2 Fleet Composition

A balanced invasion fleet:

- *2-3 Destroyers (L)*: Siege enemy stations from range
- *10+ Fighters (S)*: Swarm enemy capitals, intercept bombers
- *1 Auxiliary Ship*: Repairs hulls in the field
- *Supply Freighter*: Carries replacement missiles and drones

9.1.3 Sector Takeover

1. Destroy all enemy defence platforms.
2. Destroy the sector's administration station (if present).
3. Build your own administration station.
4. Claim the sector for yourself or your faction.

9.2 Mega-Stations

A mega-station is a single plot with 50+ modules. Benefits:

- Reduced build cost (one plot, one builder trip)
- Simplified logistics (all production in one place)
- Easy defence (concentrated turrets)

Design: Use a cross-shaped layout with production modules at the core and habitation/storage on the arms.

9.3 Ship Design Philosophy

- *Shields over Hull*: A ship that survives can be repaired.
- *Speed over Firepower*: Faster ships dictate engagement range.
- *Drones are force multipliers*: 20 defence drones > 5 more fighters.

9.4 Mod List

9.4.1 Overhauls

VRO — Variety and Rebalance Overhaul *overhaul*

The gold-standard combat overhaul: rebalances every ship, weapon, shield and missile, adds new ships and weapons, increases engagement ranges and makes capital ships feel like

capitals. The game becomes harder and far more tactical — small fighters no longer threaten capital ships.

Mechanics: Requires a NEW GAME START — it cannot be installed into an existing save or removed mid-playthrough. Do not pair with other combat-rebalance mods unless they have an explicit VRO patch (Reemergence in Wave 3 is designed for VRO).

DLC Required: All DLCs

9.4.2 Standalone Additions

Better Piracy *standalone*

Replaces the pure RNG of small-ship piracy with a predictable, time-based harassment system and rebalances capital-ship boarding. Highly configurable — set it harder or easier to taste.

Mechanics: Persistently harassing a ship with shields up eventually yields the capture; the boarding side of the mod is optional. S/M piracy with NPC pilots can be unreliable — fly the pirate ship yourself.

Reaction Force *standalone*

Adds configurable patrol commands so your defence fleets actually respond to distress signals from your ships, stations and allies instead of ignoring them. Essential once you own sectors. Use the Nexus version.

9.4.3 Utilities & Libraries

SirNukes' Mod Support APIs *utility*

Library mod providing scripting APIs (hotkeys, context menus, UI widgets) that other mods depend on. Does nothing on its own — install it first, then the mods that require it.

Mechanics: Pure API library; no gameplay changes. The optional Hotkey API component can use an external helper from the author's GitHub for global hotkeys, but the in-game features work without it.

Options Helper *utility*

Chem O'Dun's Mission Director library that lets mods expose in-game options menus through the Mod Support APIs. Required by Notification Filter.

Dependencies: SirNukes' Mod Support APIs

Learning All The Things *utility*

Lets crew gain small amounts of experience passively over time instead of only through seminars and grinding, so pilots, managers and marines reach the 3-star thresholds for autonomous trading and mining at a sane pace.

Mechanics: Every 20 minutes each NPC has a configurable chance (default 30%) to gain 1 skill point; NPCs don't learn while docked. Adjust chance/amount/job-fitting in `learningallthethings.xml`. Safe to add or remove mid-save.

Sector Satellites *utility*

A single satellite in a sector keeps trade prices and station information updated for all known non-hostile stations, removing the need to spam satellites everywhere — and is a welcome performance win.

Apologise for Attack *utility*

Lets you comm a ship or station that turned hostile after an accidental hit and apologise; if your reputation with the faction is good enough they forgive the transgression and drop hostility.

Friendly Fire Tweaks *utility*

Stops stray turret or AoE shots from instantly turning friendly factions hostile. Configurable conditions (victim being targeted, shield threshold, weapon type) must be met before retaliation penalties trigger.

Mimic Repeat Orders *utility*

Lets subordinates copy their commander's Repeat Orders queue (trade and mining routes), automatically rescaling cargo amounts to each ship's capacity. Set a route up once and mirror it across a fleet.

Mechanics: Changes propagate to subordinates within ~30 seconds; supports one level of mimicry only; ships still need sufficient pilot skill to execute the copied orders.

Dependencies: SirNukes' Mod Support APIs

Mules, Supply and Warehouses Extended *utility*

Adds four specialised trader AI scripts — Travel, Station, Supply and Distribution Mules — for automated logistics between your stations, warehouses and the open market.

Mechanics: Travel Mule sells at profit to NPC factions; Station Mule runs dedicated supply lines (and can set up warehouse stations); Supply Mule fetches resources to keep stations stocked; Distribution Mule balances cargo across your warehouse network.

KUDA AI Tweaks *utility*

Combines kuertee's Attack AI Tweaks with DeadAir's AI Tweaks: combat AI behaves smarter — ships fall back when their shields are down, pick better targets and stop suicide-rushing.

9.4.4 Visual

X4 Fire and Smoke *visual*

Flashier explosions and engine effects for combat — purely cosmetic, makes space battles look dramatic.

Paintjobs Galore! *visual*

Adds dozens of new paintjobs for your ships, so every fleet can wear its own livery.

9.4.5 Audio

Legacy Music *audio*

Expands the in-game soundtrack with music from previous X games. Pick the variant you prefer (Extended, Extended Lite, or Vanilla-matching) on the mod page.

9.4.6 UI

UI Extensions and HUD *ui*

Kuertee's UI framework: adds new panels, hotkeys and helper systems that many other mods in this list build on. Installs the framework itself and does not change game mechanics. Keep "Protected UI Mode" enabled and match the mod version to your X4 build (v9.0).

Custom Tabs *ui*

Adds up to three extra, fully customisable tabs to the map so you can keep separate property, trade and fleet views as your empire grows.

Better Scan Colors *ui*

Improves the colour shading shown on station modules during scan mode, so scanned and unscanned states are easier to read at a glance.

Notification Filter *ui*

Filters trivial messages out of the ticker and logbook (relation changes, small money transactions, storage warnings, construction pings) to cut interface clutter and ticker lag. Fully configurable.

Dependencies: SirNukes' Mod Support APIs, Options Helper

Event Driven News *ui*

Adds a news ticker driven by real events in your universe — wars, economy shifts, faction developments — keeping you informed and immersed.

Wave 3: Stellar Dominion

10 Wave 3: Stellar Dominion — Endgame Mastery

10.1 Optimizing Production at Scale

At this stage, you control multiple sectors and stations. Optimization matters.

10.1.1 Production Ratios

Each production chain has an optimal ratio. For a self-sufficient shipyard complex:

- 1x Energy Cell production : 2x Refined Metal : 2x Hull Part : 1x Claytronics : 1x Weapon Component
- Adjust based on local workforce bonuses (each race has different efficiency).

10.1.2 Workforce Management

- Each race has different bonuses to different production types.
- Teladi: Best at refining.
- Paranid: Best at advanced electronics.
- Argon: Balanced across all types.
- Split: Best at weapon production.
- Terran: Unique production chains (computronic substrate, etc.).

Mix workforce across your stations for maximum efficiency.

10.2 Endgame Crises

X4's endgame can trigger large-scale threats:

- *Xenon Awakening*: Massively reinforced Xenon fleets push from all borders.
- *Faction Collapse*: A major faction loses its last shipyard.
- *Player Threat*: Factions may coalition against a player who owns too many sectors.

10.2.1 Surviving the Crisis

1. Maintain 3+ production stations spread across different sectors (don't put all eggs in one system).
2. Keep a mobile reserve fleet (10+ Destroyers) at your best-defended sector.
3. Have a fallback sector with self-sufficient production (closed loop).
4. Use asymmetric warfare: hit their logistics, not their fleets.

10.3 Meta-Strategies

- *Gate Camping*: Place laser towers at enemy gate exits.
- *Scorched Earth*: Retreat from a sector but destroy your stations first — denies resources.
- *Economic Warfare*: Buy all of a faction's ship-building materials before declaring war.
- *Puppet Faction*: Keep one weak faction alive as a trading partner for blueprints.

10.4 Mod List

10.4.1 Overhauls

VRO — Variety and Rebalance Overhaul *overhaul*

The gold-standard combat overhaul: rebalances every ship, weapon, shield and missile, adds new ships and weapons, increases engagement ranges and makes capital ships feel like

capitals. The game becomes harder and far more tactical — small fighters no longer threaten capital ships.

Mechanics: Requires a NEW GAME START — it cannot be installed into an existing save or removed mid-playthrough. Do not pair with other combat-rebalance mods unless they have an explicit VRO patch (Reemergence in Wave 3 is designed for VRO).

DLC Required: All DLCs

Foundation of Conquest and War *overhaul*

The definitive war overhaul: per-faction configurable ship production quotas that make the galaxy actually fight — factions build real fleets, conquer sectors and can collapse. Customise every faction's aggression in the focwsetup file.

Mechanics: Manual install from the Egosoft forum thread (not on Nexus). Read the XML configuration carefully before boosting factions — cranking the Xenon too far can snowball out of control. Save-game compatible and removable.

Reactive Factions Retribution *overhaul*

Makes diplomacy consequential: as your empire grows, supporting one faction angers its enemies and befriending everyone becomes impossible. Wars become inevitable, keeping the endgame interesting.

Landlord *overhaul*

Adds a maintenance tax on stations built in sectors you don't own — paid to the sector owner — and you collect tax from NPC stations in your own sectors. Sector ownership finally has ongoing value.

10.4.2 Standalone Additions

Better Piracy *standalone*

Replaces the pure RNG of small-ship piracy with a predictable, time-based harassment system and rebalances capital-ship boarding. Highly configurable — set it harder or easier to taste.

Mechanics: Persistently harassing a ship with shields up eventually yields the capture; the boarding side of the mod is optional. S/M piracy with NPC pilots can be unreliable — fly the pirate ship yourself.

Reaction Force *standalone*

Adds configurable patrol commands so your defence fleets actually respond to distress signals from your ships, stations and allies instead of ignoring them. Essential once you own sectors. Use the Nexus version.

Recycle Ships and Stations *standalone*

Reverse-engineer captured ships at your wharf or shipyard for a chance at their blueprints, and build a dedicated module to do this before you own a shipyard. Enables blueprint acquisition without buying them.

Mechanics: VRO's internal shield generators have a much lower reverse-engineering chance — budget for buying those blueprints instead.

Reemergence *standalone*

Adds a fleet of X Rebirth-era ships — including several new capital ships — designed to work alongside VRO. Check the mod page's Files/Requirements tab for the version matching your game build and any patches.

10.4.3 Utilities & Libraries

SirNukes' Mod Support APIs *utility*

Library mod providing scripting APIs (hotkeys, context menus, UI widgets) that other mods depend on. Does nothing on its own — install it first, then the mods that require it.

Mechanics: Pure API library; no gameplay changes. The optional Hotkey API component can use an external helper from the author's GitHub for global hotkeys, but the in-game features work without it.

Options Helper *utility*

Chem O'Dun's Mission Director library that lets mods expose in-game options menus through the Mod Support APIs. Required by Notification Filter.

Dependencies: SirNukes' Mod Support APIs

Learning All The Things *utility*

Lets crew gain small amounts of experience passively over time instead of only through seminars and grinding, so pilots, managers and marines reach the 3-star thresholds for autonomous trading and mining at a sane pace.

Mechanics: Every 20 minutes each NPC has a configurable chance (default 30%) to gain 1 skill point; NPCs don't learn while docked. Adjust chance/amount/job-fitting in `learningallthethings.xml`. Safe to add or remove mid-save.

Sector Satellites *utility*

A single satellite in a sector keeps trade prices and station information updated for all known non-hostile stations, removing the need to spam satellites everywhere — and is a welcome performance win.

Apologise for Attack *utility*

Lets you comm a ship or station that turned hostile after an accidental hit and apologise; if your reputation with the faction is good enough they forgive the transgression and drop hostility.

Friendly Fire Tweaks *utility*

Stops stray turret or AoE shots from instantly turning friendly factions hostile. Configurable

conditions (victim being targeted, shield threshold, weapon type) must be met before retaliation penalties trigger.

Mimic Repeat Orders *utility*

Lets subordinates copy their commander's Repeat Orders queue (trade and mining routes), automatically rescaling cargo amounts to each ship's capacity. Set a route up once and mirror it across a fleet.

Mechanics: Changes propagate to subordinates within ~30 seconds; supports one level of mimicry only; ships still need sufficient pilot skill to execute the copied orders.

Dependencies: SirNukes' Mod Support APIs

Mules, Supply and Warehouses Extended *utility*

Adds four specialised trader AI scripts — Travel, Station, Supply and Distribution Mules — for automated logistics between your stations, warehouses and the open market.

Mechanics: Travel Mule sells at profit to NPC factions; Station Mule runs dedicated supply lines (and can set up warehouse stations); Supply Mule fetches resources to keep stations stocked; Distribution Mule balances cargo across your warehouse network.

KUDA AI Tweaks *utility*

Combines kuertee's Attack AI Tweaks with DeadAir's AI Tweaks: combat AI behaves smarter — ships fall back when their shields are down, pick better targets and stop suicide-rushing.

Hazard Rework *utility*

Hazard regions (such as the infamous Boron one) damage shields instead of hull, so AI ships stop flying into hazard zones, getting stuck and dying.

Disable Encounters *utility*

Stops the game spawning random ships around you purely to generate content; the universe feels more consistent. Side-effect: patrol side-missions can look quiet as no new ships will spawn.

10.4.4 Visual

X4 Fire and Smoke *visual*

Flashier explosions and engine effects for combat — purely cosmetic, makes space battles look dramatic.

Paintjobs Galore! *visual*

Adds dozens of new paintjobs for your ships, so every fleet can wear its own livery.

Galaxy Remake STARS *visual*

Replaces the skyboxes with sharper starfields and unique nebulae per sector. Purely visual and standalone — it does not change the galaxy map or sector layout.

10.4.5 Audio

Legacy Music *audio*

Expands the in-game soundtrack with music from previous X games. Pick the variant you prefer (Extended, Extended Lite, or Vanilla-matching) on the mod page.

10.4.6 UI

UI Extensions and HUD *ui*

Kuertee's UI framework: adds new panels, hotkeys and helper systems that many other mods in this list build on. Installs the framework itself and does not change game mechanics. Keep "Protected UI Mode" enabled and match the mod version to your X4 build (v9.0).

Custom Tabs *ui*

Adds up to three extra, fully customisable tabs to the map so you can keep separate property, trade and fleet views as your empire grows.

Better Scan Colors *ui*

Improves the colour shading shown on station modules during scan mode, so scanned and unscanned states are easier to read at a glance.

Notification Filter *ui*

Filters trivial messages out of the ticker and logbook (relation changes, small money transactions, storage warnings, construction pings) to cut interface clutter and ticker lag. Fully configurable.

Dependencies: SirNukes' Mod Support APIs, Options Helper

Event Driven News *ui*

Adds a news ticker driven by real events in your universe — wars, economy shifts, faction developments — keeping you informed and immersed.

11 Appendix: Additional Notes

Mod conflicts and incompatibilities are tracked in `conflicts.md` (not included in this PDF).
